When the story opens, John Chilcote, M.P., the victim of morphia, has reached the stage when he can no longer rely on his nerves, even for social occasions, while in the House of Commons, where he has a reputation to maintain, he cannot concentrate his attention through a single sitting. At this crisis he stumbles on his double, John Loder, an ambitious and talented hack-writer, and has little difficulty in inducing him to exchange his solitary chambers and hopeless outlook for his own place in society. All minor complications are foreseen and provided for, and Loder steps into Chilcote's shoes. But he is only to wear them intermittently, and so it happens that on every occasion when he has made a brilliant speech or a social success, or convinced Chilcote's long-estranged wife that her husband has really reformed, a telegram from his double recalls Loder to the insupportable monotony of his other life. Meanwhile, he has fallen in love with Chilcote s wife; and now we are introduced to that well-worn piece of romantic psychology, "redemption by love." Loder confesses the truth to Eve Chilcote, and finds that she knows it already; Chilcote had betrayed himself in a moment of nervous breakdown. Together they go to recall Chilcote to his duty, but they come too late. He is dead of an overdose of morphia, and the two accomplices, as they now become, agree that Loder shall quietly reap the benefits, and succeed to the dead man's house, his wealth, his wife, and everything that is his. This includes the Under-Secretaryship for Foreign Affairs in the new Cabinet. The transformation by love has lasted just so long as it takes to drive from Grosvenor Square to the sordid rooms in which Chilcote died. And so the curtain falls.

It ought to rise again in a sequel in which we might see some of the consequences of this fraud, and learn what sort of man Loder really was. To the reader of this rather well-written and highly improbable tale the interesting problem is to account for the attitude of the writer. We all remember how Mr. Anthony Hope's hero and heroine faced a similar situation. Rupert and Flavia refused to set their individual happiness against certain higher claims—the claims of right and justice. That is to say, they behaved like idealists, and Mr. Hope's readers, being idealists themselves, commended their honesty. 'The Masquerader' is written by a woman, and she makes her heroine, whom she represents as a noble and spiritual being, incapable of vulgar aims, appeal to Loder's patriotism (an under-secretary, however, is not usually indispensable to his country) as demanding the fraud they contemplate. That is, if we mistake not, the sophistical use of a purely individualistic philosophy. The author's attitude is quite negative, which is, of course, perfectly good art; she has simply reversed the part usually assigned, even in the modern novel, to the heroine, who, as a rule, still exhorts the hero to self-sacrifice, and sets his duty before him in terms very different from these.

'The Common Lot' is a study of the temptations of a professional man in a commercial society. Jackson Hart is an architect who has received his education at Cornell and his training at the Beaux-Arts. He owes that education and his three years in Paris to the generosity of a rich uncle—a Chicagoan, like himself. He has hardly embarked on his career as a Chicago architect, supported by the conviction that he will be his uncle's heir, when the old millionaire dies, leaving his millions to found an industrial school. Up to this point the architect has set his ideals high of "what a man could do, as Richardson and Atwood had shown the glorious way, toward expressing the character and spirit of a fresh race in brick and stone and steel." But that was when the question of making his own fortune was too remote to interfere. Balked of a ready-made fortune, he promptly discards the ideals and enters the race for wealth without that handicap. Not that he admits, even to himself, that his single and overmastering motive is gain. Hart is a weakling, an Underman, and cheats himself like a weakling. We are not invited to behold the gradual downfall of one who was meant for better things. Mr. Herrick's hero is like Oscar Wilde's—he can resist everything except temptation. His first independent job is a fireproof apartment house, in which, with his knowledge, a fraudulent contractor substitutes wood for steel; the fire-escapes and fireproof partitions are naturally omitted altogether. Meanwhile he has married an idealist, a Chicago girl, to whom he had confided his own artistic ideals before he had to face realities. But her attitude is an essential part of her character, and unfortunately she cannot even see that there is another side, as when she insists that her husband shall revere his uncle for having abandoned the mere individual, his nephew, in order to benefit the industrial community. Plainly, she

has no sense of humor. In the end, when the apartment house has burned down with great loss of life, and even in the business community Hart is permanently disgraced, his wife persuades him to "answer the inarticulate call of the larger world, the call of the multitudes that labor and die without privilege, to share with them the common lot of life." But you cannot make a silk purse out of anything but silk, and though a man of Hart's type may be electrified into a moment of honesty by finding that he is responsible for the death of seventeen persons, his reform will be short-lived. He was a man easily led along the levels; not for long would his wife have dragged him along the heights of her ideals.

The American novelist, unaccustomed to the soot and gloom of an English manufacturing town, always intensifies the grimness of his picture of the business life of Chicago by implying that it is carried on under a perpetual cloud of yellowish smoke. As a matter of fact, its high winds and the bright American sky above and about the city give it an atmosphere relatively brilliant.

BOOKS CONCERNING ART.

Gainsborough and his Place in English Art. By Sir Walter Armstrong. (Popular Edition.) London: William Heinemann; New York: Charles Scribner's Sons. 1904.

Impressionist Painting: Its Genesis and Development. By Wynford Dewhurst. London: George Newnes; New York: Charles Scribner's Sons. 1904.

The Treatment of Drapery in Art. By G. Wooliscroft Rhead. London: George Bell & Sons; New York: Macmillan. 1904.

The Art of Caricature. By Grant Wright. The Baker Taylor Co. 1904.

Women in the Fine Arts. By Clara Erskine Clement. Boston: Houghton, Mifflin & Co. 1904.

The Old Masters and their Pictures. By Sarah Tytler. Boston: Little, Brown & Co. 1904.

Classic Myths in Art. By Julia de Wolf Addison. Boston: L. C. Page & Co. 1904.

Sir Walter Armstrong's book on Gainsborough was reviewed by us on its first appearance, six years ago, and there remains little to say of the present edition save to welcome its appearance in a more popular form. The first issue was a magnificent folio volume with photogravure plates—a book to possess and to glory in, but difficult to read. The eight photogravures, on a smaller scale, with the forty half-tones, still furnish a fair illustration of Gainsborough's art, while the lessened bulk and weight of the volume make it easier to give the text the attention it so thoroughly deserves. Sir Walter Armstrong is worth reading, and it is to be hoped that many will peruse this book who would never have managed it in its former shape. If its success shall lead to a similar reprint of his 'Reynolds' and his 'Turner,' so much the better.

It is surprising that something like Mr. Dewhurst's book on 'Impressionist Painting' has not been sooner attempted. It should be sure of a certain welcome now. Mr. Dewhurst seems to be a painter himself, a convinced Impressionist, who has known many of the artists of whom he writes. One opens his volume, therefore, with anticipations which are doomed to disappointment. He has gathered together a good deal of information (most of it, presumably, accurate enough, though there are awkward slips) on the history of Impressionism and the lives of the painters of the school, but he has no gift of exposition, and altogether fails to make clear the aims and methods of Impressionism or the individual qualities of the Impressionist painters. The reader who did not already know, would be left in absolute ignorance of what the "movement" was all about, or why it was worthy of attention—except for a few quotations in the Appendix from Mauclair, Brownell, MacColl, and others; and even these are not the best that could be chosen. It is well that a critic should know something of the subject on which he writes; this book is another proof that such knowledge is not of itself sufficient. It is necessary, also, that he should know how to write.

There is a certain inconsequence about Mr. Dewhurst's list of illustrations. One may admit some connection between Turner and Constable and the Impressionist movement, but it is hardly illustrated by the examples of these artists included in the present volume, while the only reason one can find for the admission of two plates after Watts is an incidental confession of personal admiration for that painter on the part of the author. On the other hand, the text speaks of sketches by Toulouse-Lautrec "here reproduced," which nowhere appear. The inclusion of works by Whistler, Carrière, Alexander Harrison, and others is, however, due to the author, who counts these diverse talents as Impressionist, though Whistler, at least, protested vigorously against the application of that name to himself. For any intelligible account of Impressionism we shall still have to rely on M. Camille Mauclair's little book, 'The French Impressionists,' but the larger form of the present work marks the promotion of Impressionist art to the "centre-table," while its fuller biographical information will make it convenient for occasional reference.

It was a happy thought to discourse on "the treatment of drapery in art," and Mr. Rhead's little treatise is good as far as it goes, though it might profitably have gone farther. He is quite right in his notion that the subject is greatly neglected in our art schools and has been very insufficiently treated by writers on painting; and even so elementary a work as this cannot fail to supply many useful hints to students. Mr. Rhead is a linear designer by temperament and training, and is very unjust to the painters—he is almost comic in his attack on Tintoretto, whose "St. George and the Dragon" is introduced, apparently, only as a model of what not to do. Yet he quotes with approbation Reynolds's advice that, when the arrangement of a drapery is unsatisfactory, "it is better to take the chance of another casual throw than to alter the position in which it was at first accidentally cast." This may be good advice to beginners, but its inculcation by Reynolds was symptomatic, and sheds light on the haphazard look, happy or the reverse, of his own draperies, which are never designed as one of the great masters of drapery would have designed them. To the true composer, accident is, occasionally, a useful servant, but it should never be allowed to take matters in hand, and Mr. Rhead's adoption and reinforcement of Reynolds's counsel mark his own limitation. In the chapter on "Drapery in Movement" no mention is made of one of the most useful methods of deriving hints for the design of flying draperies—the use of tissue paper, the natural stiffness of which will hold it in positions closely resembling the effect of wind on light stuffs. It is true that the proper use of this device requires considerable acquired knowledge on the part of the artist, but this is almost equally true of any other. Mr. Rhead's original illustrations are well done, and his examples from the masters are, in general, well selected, and his book may be, provisionally, recommended to art students.

As much can hardly be said for a book of similarly practical intention, Mr. Grant Wright's 'Art of Caricature.' It is meant for a practical guide to the would-be newspaper "cartoonist," but a great part of it consists of such elementary instruction in human proportions, artistic anatomy, and perspective as may be found in a hundred other hand-books, while another good part is made up of biographical sketches of comic draughtsmen. There is a chapter on technical methods which may have some serviceableness, but there is really nothing or next to nothing on the *art* of caricature, and the illustrations are mostly such as to make one wish that the art had never been invented.

If one were asked, offhand, to name the women who have attained to notable distinction in painting or sculpture, the chances are that one would find oneself at a loss before one had reached the half-dozen; yet Mrs. Clement has been able to find "the names of more than a thousand women whose attainments in the Fine Arts—in various countries and at different periods of time before the middle of the nineteenth century—entitle them to honorable mention as artists," and, by adding "the army of women artists of the last century," she has made up a book equal in bulk (though the type is larger) to her 'Dictionary of Painters, Sculptors, Architects, and Engravers.' How inclusive has been her grasp is shown by the frequent presence of names against which the only entry is: "No reply to circular." Was it worth while to give the names of artists of whom she knew nothing whatever save that they exist? Where there is more information it is often too evident that the "circular" has been answered, and that the artist herself is responsible for what we are told. Of course, the whole book is not of this texture, and perhaps it is better to give too much than too little. As a book of reference, it will have its use in spite of the paucity of dates that was, perhaps, to have been expected.

'The Old Masters and their Pictures' is intended "for the use of schools and learners in art," and is gently condescending in tone and none too accurate as to facts. None but the hungerer after "culture" *à bon marché* need waste time over it, or over another book of a familiar type, Julia de Wolf Addison's 'Classic Myths in Art.'

The United States: A History of Three Centuries, 1607-1904. Population, Politics, War, Industry, Civilization. By William E. Chancellor and Fletcher W. Hewes. In ten parts. Part I. Colonization, 1607-1697. Putnams. 1904. Pp. xxiii., 533.

This latest aspirant for favor in the field of coöperative history has some novel features. Each of the ten volumes is to be divided into four parts, dealing respectively with population and politics, war and conquest, industry and commerce, and civilization. Under the first division fall "the various phases of discovery, settlement, expansion of territory, immigration, race, government, domestic politics, and international relations." The third section, treating especially of agriculture, manufacture, and commerce, is to be particularly emphasized and made a distinctive feature. The topics of the fourth division are "religion and morality, literature and art, education, and social life." Each of the volumes after the first is also to have a chapter on the European history of the period, so far as related to America, in order to give opportunity for comparison between the achievements, in different epochs, of our own and other countries. The illustrations, save for a frontispiece of Capt. John Smith, are in this volume confined to colored "historical perspectives" (or diagrams) and maps, the latter chiefly in black and white. The diagrams prefacing the several sections exhibit the ingenuity of all such devices, and facilitate comparison of events; for the period covered by the first volume, however, we do not find them especially instructive. There are also other "historical perspectives," which consist of chronological summaries only. The larger maps are useful, but the small sectional maps, of which there are a great many, are as a rule either so fragmentary or so crude as to be of little real service. A few pages at the end offer some brief notes on points in the text, together with miscellaneous lists of books, some of them school manuals, cited as authorities.

The publishers' announcement informs us that, in the division of labor between the authors, Mr. Hewes is responsible for the third section—on industry and commerce—the diagrams, most of the maps, and statistical matters in general, while Mr. Chancellor has done the rest. Of Mr. Hewes's portion it may be said that, while its contribution is slight and its style unadorned, the separate treatment of economic subjects emphasizes a wofully neglected side of American history, and makes the chapters easy and not unprofitable reading. The judgment on Mr. Chancellor's performance must be less favorable. Not only is the substance conventional and slight, and the evidence of first-hand (or even good second-hand) knowledge of the subject conspicuously lacking, but the style is pervaded by "fine writing" and flippant jauntiness. The conscientious critic will note, in passing, that the estimate of the aboriginal population of America as numbering from seventeen to thirty millions (p. 72) is the merest guesswork, and utterly without scientific foundation; that the first Massachusetts charter was not annulled by *quo warranto*, but by *scire facias* (p. 237); and that the Maryland charter was not "the model for all later colonial grants" (p. 270) save in a sense which does not appear at all in Mr. Chancellor's account. To criticise Mr. Chancellor's work in detail, however, or to point out wherein he has failed to show essential fitness for his task, would be as profitless as to exhibit at length one's reasons for thinking that the average intelligent schoolboy's composition on Israel Putnam or Abraham Lincoln is not a valuable contribution to historical writing.

One may protest, however, against the intrusion into the text of airy and inept allusions to current controversies, or the cheap comment which does duty with many for historical parallelism. Not to make the list exhaustive, the forced and pointless reference to woman suffrage in connection with Elizabeth and Ralegh (p. 59); to "our years and our districts when famine smites the many to advance the financial interests of the few" (p. 83) as evils from which the "Amerinds" (meaning the American Indians) were free; to the English merry-making as "a periodical debauch of men and women" among "the vulgar English" (p. 227); and to the Spanish Infanta," as the unfortunate girl who happens to be the oldest [*sic*] daughter of the Spanish King is styled in the matrimonial markets of the royal world" (p. 265), have neither dignity nor point. One dreads to think of a ten-volume work drawn out on such a scale. It is to be hoped that the later volumes may show marked improvement in this as in other respects.

Rome. By Walter Taylor Field. Boston: L. C. Page & Co. 1904.

It is true that the ordinary visitor to Rome, if he care to use a book at all for his direction, may well desire something a little more juicy than the typical guidebook, and much more systematically comprehensive than the learned treatises of specialists. The popularity of Mr. Hare's works is sufficient testimony to the felt need. Professor Field has undertaken to meet it by two little volumes, profusely illustrated from photographs, and charmingly printed and bound. They are written in a chatty style, and are designed to lead the traveller, in successive days' trips, around the city and its immediate environs, and then through some of its more important churches and museums, entertaining him with such cheerful running comments as an amiable and well-instructed guide might furnish orally. The author's style sometimes halts grammatically, and his humor is a bit crude and palling, interposing itself unnecessarily in the attempt to give a breezy effect to the whole. As to accuracy of matter, the book exhibits occasionally a curious combination of knowledge of recent technical literature with error in simple things. It is as if the writer had compiled his information from a few popular books, with some "pointers" from archæological friends, and had not thoroughly assimilated his Rome, either ancient or modern.

He is not always up to date. For example, the Ludovisi sculptures (i. 220) have been resting for some time in the Museo delle Terme; the Church of S. Maria Liberatrice (plan, i. 122) was destroyed sundry years ago (and there is no such space between the Basilica Aemilia and S. Adriano as the plan shows); the Barberini library (ii. 73) has been purchased by the Vatican; we were not aware that the mid-stream arch of the Pons Aemilius had for the last fifteen years or so been connected with the bank by "an uninteresting iron framework," or had served as the ordinary bridge for traffic within that time; and it is news to us that Pasquin (i. 56) now rests in the Vatican Museum. Can this be true? Surely his gossip Marforio (*ibid.*) never reclined in the Subura.

In historical as in archæological matters the author is frequently at fault. The Caecilia Metella of the well-known tomb on the Appian Way (i. 248) was not Sulla's wife; Alba Longa was not built (i. 253) on top of the Alban Mount; the Fountain of Juturna was not the same thing (i. 131) as the Lacus Curtius; the "bases of crumbling pilasters" (*sic*) that "stretch in parallel lines along the surface" of the Basilica Julia (i. 124) are hardly more than thirty years old; the portrait bust that now stands on the sarcophagus of Scipio Barbatus in the Vatican Museum (ii. 187) is in no sense a part of the monument; the Arch of Titus does not display (ii. 191) "the best historic relief that Rome produced" (how about Trajan's Arch at Beneventum?); and the "Egyptian" obelisk of S. Trinità dei Monti is so far from deserving the heroics lavished upon it by Mr. Field (ii. 139) that it is not Egyptian at all but a late imperial Roman imitation (*cf. Bull. Com.* 1897, p. 216). Anio Nova (twice), P. Asinara, Atta Navius are bad Latin. These are but varied samples of manifold errors, which make the book, despite its beauty, a treacherous guide.

Facts and Figures. The Basis of Economic Science. By Edward Atkinson. Boston: Houghton, Mifflin & Co. 1904.

To the ordinary man it seems a paradox to maintain that there may be little difficulty in taking the tariff question out of partisan politics. Yet such is Mr. Atkinson's belief, and he gives his reasons for it. If the facts can be made plain, he says, "as to the small relative number of those who attempt to secure profits by taxes on imports, compared to the very large number of those who pay taxes that the Government does not receive; and also as compared to the relatively much greater number of the persons directly interested in free exports and therefore in free imports," the difficulty will be overcome.

Certainly, Mr. Atkinson makes the facts plain. He analyzes the census reports and the custom-house returns, and proves beyond all question that the number of persons profiting by our tariff taxes is extremely small. The value of the product of the farms of this country is not far from five billion dollars; but the value of the wool produced is less than one and a quarter per cent. of this total, and most of this wool is from the great flocks of sheep in the far Northwest. The value of all the farm products subject to foreign competition, even including tobacco, does not exceed two hundred million dollars. Persons engaged in professional service are not exposed to the competition of foreigners, nor are those in personal service or in trades and transportation. In manufactures, mechanic arts, and mining, a careful examination shows that about 6,300,000 are "practically free from the possibility of

an import of a product of like kind from any foreign country." There are subject in part to foreign competition not over 400,000, and subject to urgent foreign competition hardly any more. Making all manner of concessions, we must conclude that less than one million persons engaged in productive industry are in a position to be affected injuriously by free trade, whereas twenty-eight millions would be benefited. Moreover, the advantages resulting from cheaper materials and machinery would more than offset the effect of foreign competition in the case of several hundred thousand out of this million. But in the remnant are many men of vast wealth and great political power.

Whether Mr. Atkinson is too sanguine or not, he deserves honor for his courage and for his industry. He has been at pains to ascertain the facts concerning the cost of our experiment in Imperialism, and he has made them public in defiance of the Government. He repeats his story here, and restates his facts; and he glories in being called a traitor for telling the truth about the conduct of our rulers. Such treason as his is the truest patriotism, and he may say with Lowell of his devotion to his country:

"I love her old renown, her ancient fame:
What better proof than that I loathe her shame?"

Incidentally, Mr. Atkinson brings out a fact that is little known—that the proportion of persons employed in great factories is diminishing. "The statistics prove a constant increase in the relative proportion of persons occupied in the lesser arts in small workshops." Even the great department stores cause no lessening of the number of small shops. A study of the industries of the city of Boston is of extreme interest as bearing on this point. The tendency is encouraging, and we may share Mr. Atkinson's hope that the small craftsmen, being of some intelligence and independence, may be induced to attend to the evidence which proves how they are hampered by the present tariff.

The Monroe Doctrine. By T. B. Edgington. Boston: Little, Brown & Co. 1904.

This is a rather rambling discussion of the Monroe Doctrine and of subjects more or less connected with it, such as the Panama Congress, the Clayton-Bulwer Treaty, the French invasion and usurpation in Mexico, and the establishment of the empire of Maximilian; the Venezuelan Boundary; the Canal; the Hague Tribunal, etc. The most valuable part of it, probably, is the discussion (pp.218-266) of what the author chooses to call the "Calvo Doctrine"—an unfair designation, it would seem, if the author himself is correct in saying (p. 221) that this doctrine is constructed on an "innuendo" conveyed by the text of that eminent writer on International Law, rather than on the text itself. Calvo merely says that a nation's public law does not admit of intervention by foreign nations (p. 221), while the "innuendo" is that a nation can deal with foreigners as it pleases. The author, at any rate, in what he has to say about it would have been more forcible if he had simply remarked that some South American States seem to have a doctrine of their own on the subject of foreigners which needs the careful attention of foreign governments.

Briefly stated, the Venezuelan and Salvadorean statutes provide that a resident foreigner who meets with injustice at the hands of the tribunals of the country in which he resides, may be deprived in some way of the right of appeal to his own country. In Salvador, to take the strongest case, it is provided that a foreigner shall not appeal for redress to his own Government against a positive decision, "even though it may be said that the decision is iniquitous or given against express law." Mr. Edgington shows by a very elaborate and full argument, fortified by authority in a variety of ways, that this is a monstrous pretension, because the well-known principle of international law, that a domiciled foreigner is governed by and submits to the laws of his acquired domicile, is always qualified by the rule that the Government of his own country may inquire into any injustice done him, if it is worth while. As a general rule, he is wholly subject to the laws of his adopted country; but the right to appeal to one's own Government, and the right of that Government to interfere in the interest of its own citizens, cannot be done away by statutes passed by a foreign country. Venezuela insists that a foreigner shall stipulate a waiver of the right as a condition of residence; but it is very doubtful how far any such waiver or stipulation would be recognized, for example, by the United States, as precluding an appeal to Washington from an American citizen in Caracas against plain spoliation. Our Government is not bound by any such waiver; and if it may intervene of its own motion, such a waiver will not prevent. But in this case Venezuela does not go to the length of trying to make the waiver debar from appeal in cases of obvious injustice. On the whole, there is evidence of a desire, so far as possible, to oust the resident foreigner of his right of appeal, but it is not of such momentous importance as the author thinks, and it is far outweighed by the growing tendency of the greater nations to interfere more and more on behalf of their citizens domiciled abroad, and of these citizens to appeal to them for redress on every occasion.

The author is seen at his best in this part of his book; he is strongest in a technical legal argument, weakest in the proper field of international law. He is full of suggestions, some of which are more ingenious than weighty, *e. g.*, that in the exercise of our protectorate of South America (he speaks of the "duty," derived from the Monroe Doctrine, which lies upon our Government to devise "means for preventing revolutions, internecine strifes and wars," and defalcations in South American States) we should get a receiver appointed, possibly by the Hague Tribunal, to administer temporarily upon the affairs of any very bad State, and, after a proper liquidation, set it going again with a legitimate government (p. 297). He makes the suggestion also (ch. xiv.) that the coaling-station question might be solved by allowing neutrals to supply coal *ad libitum* to belligerent vessels touching at their ports. So it might; but as long as nations universally insist on the rules as to contraband being enforced even against ordinary trade, the suggestion seems rather visionary. Extravagance of statement is a foible which the author is not at sufficient pains to avoid. To tell us that the Pacific Ocean is "practically an inland sea within the boundaries of the United States" (p. 112) makes us feel that we may be listening to a stump speech rather than to a discourse on international law.

The Cathedrals of England: An Account of Some of their Distinguishing Characteristics; together with Brief Historical and Biographical Sketches of their most Noted Bishops. By M. J. Taber. Illustrated. Boston: L. C. Page & Co. 1904. Pp. viii., 287.

This little book is the third volume of "The Cathedral Series," and in a curious way it explains the puzzling books we have already reviewed, namely, the 'Cathedrals of Northern France' and of 'Southern France,' by Francis Miltoun. The present volume has a short author's foreword, in which it is explained that the principal aim of the book is to give glimpses of the bishops, rulers, and other noted personages who have had to do with the cathedrals. That is comprehensible; and the purpose of the book is furthered by a final chapter entitled "In Explanation," in which are found a good many interesting statements about cathedrals and bishops and croziers, about old foundations and new foundations. Some are naïve enough in their way—*e. g.*, "The east end of the church is sometimes round and is then called the apse"; "The garth is the green yard around which the cloisters are built. Another use of the garth and cloisters was for informal disputations among the monks."

The reader will easily see the trick of it. It is a glossary intermingled with innocent little expressions of opinion. One of the paragraphs is devoted to the words *bishop* and *évêque* and their common derivation from *episcopus*. A similar gentle humor is to be found in all parts of the book, and is mingled with a readiness to give a simple sort of quotations and anecdotes from all kinds of authors, which make the volume rather a selection of stories for young folks on idle summer days than a treatise on anything in particular. The jokes and stories need an index, it is true, but then every one can make his own. "Queen Caroline inquired if the author were dead. 'No,' replied Bishop Blackburn, 'but he is buried.' The Queen acted on the hint," etc. Mrs. Taber has made herself familiar with the literature concerning Queen Elizabeth, and is always citing her, choosing rather anecdotes which throw discredit upon that certainly much overpraised sovereign.

The illustrations are several degrees better than those of the two volumes devoted to the cathedrals of France. Some three or four of them are really quite satisfactory photographic prints—small and dark, but explanatory.

The Nation

VOL. LXXIX—NO. 2055. THURSDAY, NOVEMBER 17, 1904. PRICE TEN CENTS.

"*It is the most valuable biography of the season.* **A larger, richer, truer life chronicled with more wealth of detail and greater charm of simple and direct narration, embellished with timely anecdote, it would be hard to find. The writer's memory seems to be an inexhaustible storehouse of reminiscences which cannot fail to please."—*The Dial, Chicago.***

The Autobiography of Moncure D. Conway

"It would be difficult to name any other biography which contains so extraordinary a list of prominent literary or scientific names in England or in America. It is safe to say that for personal anecdotes the book is unequalled, and that neither Boswell's Johnson nor Lockhart's Scott contains so many separate entries. It is also true that Mr. Conway's perceptions are so keen and his literary handling at once so graphic and so well trained that there is not a dull page in the book. At any rate, it gains in constant interest from beginning to end. To these gifts is to be added a freedom from personal vanity and a conscientious desire to do justice to all."—*The Nation, New York.*

Illustrated with a large number of interesting portraits and views. In two volumes, 8vo, gilt top, $6.00 net. Postpaid, $6.43.

TWO IMPORTANT BOOKS OF NOVEMBER 16th

EDWARD M. CHAPMAN'S

The Dynamic of Christianity

The author defines the source of power in the Christian faith and shows that its fundamental principle is held, whether he knows it or not, by the man who accepts even the most advanced results of scientific research.

The book treats of "The Zeitgeist," "The Present State of Popular Theological Thought," "The Religion of the People," "The Social Unrest," "The Thesis," "The Witness of Scripture," "The Witness of the Christian Church," "The Witness of Individual Experience," "The New Freedom of Faith," "The New Meaning of Some Old Words," and "The New Harmonies of Revelation." $1.25 *net*. Postpaid, $1.37.

LEBARON R. BRIGGS'S

Routine and Ideals

Ever since the appearance of Dean Briggs's first book of essays, "School, College and Character," its readers have waited impatiently for its successor. In the new book just published the essay on Routine and Ideals is a treatment, by one who is wise in experience, of the two aspects of all scholastic life; the routine of study and the ideals which illuminate it.

"Dean Briggs" is a name to conjure with, not only among Harvard men, but in college circles everywhere, for he is the most loved and respected figure engaged in administrative and disciplinary duties in any American college. $1.10 *net*. Postpaid, $1.19.

"A GREAT AMERICAN NOVEL"
THE ISSUE By GEORGE MORGAN
Illustrated. At all Booksellers.

"THE BEST SHORT LIFE OF NAPOLEON"

NAPOLEON **A Short Biography.**

By R. M. JOHNSTON, Lecturer in Italian History at Harvard University. Illustrated. 12mo. Cloth. $1.00 net. (Postage 10 cents). *Used at Yale, the University of California, and elsewhere.* (*Second Edition.*)

Professor EDWARD G. BOURNE, of Yale University, says: "Mr. Johnston's Napoleon fills an unoccupied place in the literature on Napoleon accessible to the English reader and supplies a distinct need. It is not only a succinct and lucid account of Napoleon's career and of the changes he wrought in Europe but it is also a guide to the best books that have been written about the different phases of Napoleon's life."

The *Nation* says: "Mr. Johnston's book is popular history of the best class—scholarly, readable, and acute. It is not only possible to read this volume, but it is difficult to deny one's self the pleasure of an uninterrupted perusal. His account of military operations is particularly clear, and many readers will be indebted to him for their first real knowledge of the tactics which were developed during the wars of the French Revolution. To all who would acquire the essential facts by the shortest possible cut, Mr. Johnston's volume can be recommended, and, unlike most short cuts, this is a safe one to take."

The London *Spectator* says: "Mr. Johnston's Napoleon is admirable. Clear and comprehensive."

THE CITIZEN **A Study of the Individual and the Government.**

By NATHANIEL SOUTHGATE SHALER, Professor of Geology in Harvard University, Dean of the Lawrence Scientific School. 12mo. Cloth. $1.40 net. (Postage 12 cents). (*Second Edition.*)

Professor Franklin H. Giddings, of Columbia University, says: "I think it is the best book on the interests and duties of a citizen I have seen."

"A book that will hold the attention and interest of readers of all ages."—*The Outlook.*

"Practical and stimulating."—*Springfield Republican.*

LIVES OF GREAT WRITERS

IN THE DAYS OF CHAUCER **The Story of His Life and Times.**

By TUDOR JENKS. With an Introduction by Hamilton Wright Mabie. 12mo. Cloth. $1.00 net. (Postage 9 cents). Already in use at Smith College and elsewhere.

Prof. FRANCIS HOVEY STODDARD, New York University, says: "I believe these books will be very useful. I shall be glad to commend 'In the Days of Chaucer' to students."

Prof. CHARLES BELL BURKE, Adelphi College, Brooklyn: "A delightful book. Popular in view, it is also scholarly, and betrays not only historical, but also fine literary appreciation. I shall recommend it as widely as possible."

The *Outlook:* "An extremely interesting piece of biographic writing in the broad sense of the word, presenting the man against the background of his time, in idea, society, taste, dress, speech and amusement, with great vividness. An initial volume in a new series of books projected along vital lines and to be written in a vital spirit. Fresh, informal, taking. Not only the story of Chaucer's life, but a picture of the England of his time."

(*Ready shortly, "In the Days of Shakespeare," by Tudor Jenks. Uniform edition.*)

FICTION

THE PRESIDENT. A Novel. By ALFRED HENRY LEWIS. Illustrated in colors by J. Hambidge. 12mo. Uniform with "The Boss." $1.50.

THE AWAKENING OF JAPAN

BY

OKAKURA-KAKUZO

Author of "The Ideals of the East"

Now that the whole Occidental world is agape with wonder at the magical prowess and progress of the Japanese people, we Westerners will read with deep interest this remarkable story of how Japan has awakened from her medieval slumbers into the bright light of modern thought and Western aggressiveness. And despite the warnings of Europe we will be likely to echo the author's epigrammatic utterance that "'the Yellow Peril' is a 'white lie.'"

Mr. Okakura, who writes the most fluent and graceful English, is at present in this country, being connected with the Boston Museum of Fine Arts.

THE ATLANTIC MONTHLY

1905

THOREAU'S UNPUBLISHED JOURNAL

A LITERARY FIND

The intimate reflections of this remarkable man. Copious extracts will appear in several instalments—introduced in January, 1905, by an essay by BRADFORD TORREY, the Editor of the Journal.

THE DIARY OF A RECLUSE

LETTERS TO LITERARY STATESMEN

A brilliant series of anonymous letters, the author of which has obvious reasons for remaining unknown. The public men to whom these letters are addressed will forgive their occasional wickedness in consideration of their wit.

WIT SATIRE WISDOM

BY THE AUTHOR OF DAPHNE

The complete novelette by Miss Sherwood, published in THE ATLANTIC a year ago, stamped her as a writer of the first quality. A longer story from her pen, *The Coming of the Tide* will follow *Isidro* as the leading serial for 1905.
It is just a love story, with a woman and a man, a few other men and women, a dog, and the sea—all of it exquisitely written, and gleaming with poetry and humor.

THE COMING OF THE TIDE

AN AMERICAN GYPSY

Few Americans have led so varied a life as *C. G. Leland*, author of the famous "Hans Breitmann Ballads." These biographical papers, by his niece, *Elizabeth Robins Pennell*, reveal the many-sided character of this remarkable man and narrate his adventures.

POET SCHOLAR AND REVOLUTIONIST

TYPICAL AMERICAN INSTITUTIONS

Papers replete with humor and philosophy on *The Country Store*, *The Grange*, etc. First-hand Reports of Experiences in the Everyday Life of *A Prison Chaplain*, *A Census Taker*, *A Newspaper Woman*, *A District Attorney*, etc.

EXPERIENCES IN VARIOUS CALLINGS

These are a few of the features arranged for 1905. Political articles and Social Studies of the first importance will appear in each issue, but naturally cannot be definitely announced, as THE ATLANTIC follows the daily life of the country, and cannot foresee events. Important book reviews and literary essays and the Contributors' Club will be continued.

Illustrated prospectus for 1905 now in preparation sent free on request

TAKE YOUR CHOICE

Send four dollars now and receive The Atlantic for 1905, with the October, November, and December issues of 1904 free, or send fifty cents for a trial subscription (October, November, and December), and remit for 1905 when you are sure you want it.

35 cents a copy *$4.00 a year*

THE COMPLETION OF A GREAT WORK

SOCIAL ENGLAND

A Record of the Progress of the People in Religion, Laws, Learning, Arts, Science, Literature, Industry, Commerce, and Manners, from the Earliest Times to the Present Day.

By Various Writers, each an acknowledged authority on his subject.

Edited by H. D. TRAILL, D.C.L., Sometime Fellow of St. John's College, Oxford, and **J. S. MANN, M.A.,** Sometime Fellow of Trinity College, Oxford.

"The reliability and practical as well as attractive arrangement of the matter, combined with the faithful execution of an admirable plan, make the work deserving of the highest praise."
—*Chautauquan.*

"What Macaulay did and contemplated doing, Mr. Traill and colleagues do. . . . This is alike a valuable and an important work. In every page it is promising of conspicuous success."
—*Scotsman.*

IN SIX VOLUMES (each complete in itself)

Part I.—From the Earliest Times to the Accession of Edward I.
Part II.—From the Accession of Edward I. to the Death of Henry VII.
Part III.—From the Accession of Henry VIII. to the Death of Elizabeth.
Part IV.—From the Accession of James I. to the Death of Anne.
Part V.—From the Accession of George I. to the Battle of Waterloo.
Part VI.—From the Battle of Waterloo to the General Election of 1885.

"This work clarifies into invincible facts the record of the progress of the people of England. The social life and other elements of the history of the period are made as easily accessible to students as are the definitions of a dictionary."
—*N. Y. Times.*

"A stupendous undertaking. . . . We are enabled to trace the successive stages of our civilization as they are marked by the steady march of moral and intellectual progress, or accelerated by some sudden increase of wealth and prosperity."
—*London Times.*

KING EDWARD EDITION
6 volumes, containing about 5,500 pages and 2,500 Illustrations, including numerous Colored Plates reproduced from authentic sources.
Royal 8vo; per volume, net, $5.00 (carriage 50 cents extra). *Sold in sets only.*

POPULAR EDITION
6 volumes, 8vo. *Sold separately*, each $3.50.

READY NEXT WEEK

Thomas Nast: His Period and His Pictures

By ALBERT BIGELOW PAINE, Author of "The Great White Way," "The Van Dwellers," "The Bread Line," "The Hollow Tree," etc., etc. *Fully illustrated. Cloth, 8vo. $5.00 net*

PUBLISHED THIS WEEK

Mr. James Ford Rhodes' History of the United States

Volume V. 1864-1866. *Cloth 8vo, $2.50 net (postage 23c.)*

This volume can be supplied singly uniform with either the older editions of the set (Harper's) or the new (Macmillan's).

Previously Issued:
Vol. I. 1850-1854
Vol. II. 1854-1860
Vol. III. 1860-1862
Vol. IV. 1862-1864

"The definite clearness of judgment and the right-minded fairness of criticism shown in each chapter support our earlier judgment that the whole book will be a trustworthy guide, and a friendly companion in our study of the time as indispensable to those whose canons of political judgments may differ from the author's as to those who fully accord with him."—*The Nation.*

The set in five volumes. Cloth, new ed., $12.50 net

Professor Charles Franklin Dunbar's Economic Essays

Edited by O. M. W. SPRAGUE, Assistant Professor of Economics in Harvard University, with an Introduction by F. W. TAUSSIG, Henry Lee Professor of Economics in Harvard University. *Just ready. Cloth, 8vo, $2.50 net (postage 21c.)*

Mr. Robert Hunter's Poverty

Describes the never-ceasing battle with poverty, its tremendous increase in this country, the social influences that foster it, and the degeneracy of the pauper and the vagrant who are beaten in the struggle. *Cloth, $1.50 net (postage 10c.)*

OTHER RECENT ISSUES

Mrs. Roger A. Pryor's Reminiscences of Peace and War

By the only Southern woman who was practically within the Confederate camp from first to last during the war.

"Seldom does one find a book so uniformly charming in matter and manner."—*Chicago Record-Herald.*

With six portraits. *Cloth, crown 8vo, $2.00 net (postage 21c.)*

Rev. Hugh Black's The Practice of Self-Culture

The author of "Friendship," etc., discusses the best ways of equipping the self for service.

Cloth, $1.25 net (postage 10c.)

Pres. William De Witt Hyde's From Epicurus to Christ

A study of personality based on five principles: Pursuit of pleasure, self-control, subordination, proportion, and the Christian spirit of love. *Cloth, 12mo, $1.50 net (postage 11c.)*

Pres. King's Personal and Ideal Elements in Education

Deals with the function of the college (as distinct from school and university) to teach the fine art of living; with the nature of religion and modern religious education; and with the fight for character. *Cloth, 12mo, $1.50 net (postage 11c.)*

Mr. W. J. Ghent's Mass and Class

The author offers a fresh analysis and description of social classes; he rejects the definitions given by orthodox writers, and pungently criticises the dominant trading class. *Cloth, 12mo, $1.25 net (postage 10c.)*

Mr. Lafcadio Hearn's Japan: An Attempt at Interpretation

"Dealing as no other writer in English could deal with mainsprings of Japanese character. . . . as pure interpretation it is almost invaluable."—*Boston Advertiser.* *Cloth, 12mo, $2.00 net (postage 13c.)*

Mr. Clifton Johnson's Highways and Byways of the South

Uniform with "New England and its Neighbors," etc. The book covers the South, east of the Mississippi, with even more picturesque interest than the other volumes in this series. *Cloth, $2.00 net (postage 15c.)*

Mr. Edward T. Devine's The Principles of Relief

"By far the most original and valuable book in its general field which has appeared in ten years."—HOMER FOLKS, Secretary State Charities Aid Assoc., Ex-Comm'r of Public Charities, New York City. *Cloth, $2.00 net (postage 12c.)*

Dr. Edward Everett Hale's Memories of a Hundred Years

A new edition with three new chapters on Dr. Hale's childhood, youth, and the great causes which have interested him most deeply. *In one volume, cloth, 8vo, $2.50 net (postage 22c.)*

Published by THE MACMILLAN COMPANY 66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 17, 1904.

The Week.

For the first time since the foundation of the Republican party, a House of Representatives has been elected having a working majority of one hundred for the party also in control of the Senate and the Presidency. In the Fifty-second Congress, 1891-93, the Democrats had a majority of 140 in the House, but Harrison was President and the Senate was Republican. In the Fifty-fourth Congress, 1895-97, the Republicans had a majority of 133 and controlled the Senate, but Cleveland was President. The Fifty-first Congress, which passed the McKinley act, had a working majority of only 7, while in the Fifty-fifth, which passed the Dingley act, the Republican majority over Democrats and Populists was 42. Aside from the weakening of the Opposition—always a regrettable thing in a legislative body—it is particularly unfortunate that the minority in the next Congress should be so largely sectional. Northern States which are represented by 55 Democrats in the present Congress have elected only 29 to the next. There will be at least 20 solidly Republican State delegations, as against 16 at present, and several more with but one Democrat each. New York loses 6 Democrats, New Jersey 2, Pennsylvania 3, Illinois 5, Indiana 2, Ohio 3, and Missouri 5. Such strong men as Cowherd of Missouri and Williams of Illinois are among the fallen. Whether the minority can recover from this blow sufficiently to make next year anything like the effective opposition it did in the last under Mr. John Sharp Williams, is a question in which men of all parties have an interest.

Southern comments on Mr. Roosevelt's victory are in the main good-tempered. The Richmond *Times-Dispatch* calls attention to the fact that the President did not carry a single Southern State as though this were a rebuke to him, but it had probably not heard from the border States, Maryland, West Virginia, and Missouri, when it wrote. It earnestly but vainly hopes that Mr. Roosevelt will now adopt the Southern view of the negro. The Norfolk *Landmark* freely admits that, but for the Washington dinner and the Crum incident, five or six Southern States also would probably have gone for Roosevelt. The Columbia *State*, ordinarily of excellent judgment, thinks it necessary to print "just a word of advice to the negroes of South Carolina." It notices some evidence of jubilation among them over the election. To this it has no objection, but it adds significantly that it "would be exceedingly unfortunate if they should conceive the notion that they have captured South Carolina and act accordingly." Further: "It would be well for them to realize that, if trouble is provoked, the negroes will be the chief sufferers, and a dozen Roosevelts cannot help them." Compared with these words of menace, the utterances of the Richmond *News-Leader* are refreshingly frank and sane. "It is possible," this newspaper concedes, "that some outbreaks and barbarities of which Southern communities have been guilty have contributed to the result." Now, more than ever, then, is the time for the Southerners to obey the laws and to be "rigidly just in their dealings with the negro." Not only will any outrages strengthen Mr. Roosevelt, but "we [Southerners] cannot hope for the respect, confidence, and good will of the people of our country unless we deserve them by our own conduct."

Secretary Hay gravely remarks that the "baselessness of the attacks upon the President's Panama policy has now been demonstrated." This shows what a joke it was on the professors of international law when the defenders of the Administration pretended to answer their arguments. That was simply marking time till the election came; and the real way of finding out whether precedent and law and treaty had been violated was to count noses. It was like Pension Commissioner Ware's appeal on a point of law from the lawyers to the blacksmiths. The blacksmiths won by a large majority, and the lawyers naturally felt pretty cheap. So must the professors of international law whom Secretary Hay now puts down with the election returns. Woolsey and Macvane are clearly outweighed, as they are outvoted, by Nokes, Stokes, and Boggs. Of course, Mr. Hay does not mean this seriously. He would privately side with Aristotle in insisting that the only verdict which counts in such matters is that of the judicious. He would not really wish the colleges to burn all their books and decide questions of history and law by holding a caucus in a saloon. And no one knows better than the Secretary that the voters did not on November 8 pass upon the Panama question—or, for that matter, any other question of pure policy. Never was there a campaign in which "argument" went for so little. Roosevelt voters simply looked queer when it was adduced, and said, "Granting all that, we are going to vote for Roosevelt just the same."

Governor-Chairman Odell regards the result in New York State as a personal vindication; and people who are inclined to dispute this view must admit that, at any rate, Odell is now absolute master of the Republican machine. He staked all on the result of the balloting on November 8, and he won. The Governor-Chairman served notice that he would be responsible for this State, and he has conducted the campaign here with little or no interference from Mr. Cortelyou. He has profited by President Roosevelt's general personal popularity; he shares the benefits of a striking victory for which he deserves relatively little credit. His own equity in this estate—if we may use such a term—is indicated more accurately by the vote cast for Mr. Higgins. Had any one told Mr. Odell on November 7 that Higgins would fall 100,000 behind Roosevelt, the State chairman would have confessed that the jig was up with the candidate for Governor. Mr. Odell's feverish activity, his stump speeches, in the last days of the fight are sufficient evidence of his apprehensions. And yet Mr. Higgins has the eminently respectable plurality of 75,000. The State was so strong for Roosevelt that 100,000 votes one way or the other was an inconsiderable trifle. Tag or no tag, Mr. Odell has elected his ticket and a big majority in the Legislature. He may fairly ask, "Can I not do what I will with my own?"

Judge Parker is in no need of a *post mortem*. He is, in fact, a very lively and good-natured corpse. In crushing defeat he bears himself with the same smiling poise and quiet dignity that marked him throughout the campaign. His wholesome and steady personality made friends for him everywhere, and bore out the epigram of the Republican judge who said that, of course, he was going to vote for Parker, but thought he would not be elected because there would not be time before election for the voters who had seen Roosevelt to see the Judge. Aside from this pleasing personal impression, which will go with Mr. Parker into retirement, he will be long remembered as a candidate who stoutly advocated principles, whether men would hear or forbear. He stood for political truths which ought to be popular, if they are not just yet; and when they come to fruition—when the corrupt alliance between the tariff beneficiaries and the Republican party is broken up; when we recover the Declaration of Independence and apply its principles to the Filipinos—Judge Parker will be recalled as one who preached to his countrymen sound doctrine before they were ready to receive it, and will be honored accordingly.

Gorman's defeat in Maryland is a genuine cause for rejoicing. It is not to be believed that even if the Democrats had carried the State his attempt to disfranchise the negroes would have been successful, for it had been denounced by the Democratic Governor and many prominent Democrats. But he is a perpetual mischief-maker, a leader who bodes no good to the cause with which he is allied. An avowed protectionist, he belongs in the Republican ranks. Unscrupulous as Tillman himself, he has been as ready as that demagogue to stir up race hatred. He will, of course, remain in the Senate; but he really ought to be in retirement along with Hill.

We may still hope that Addicks will be kept out of the Senate. He is eight votes short of a majority in the Delaware Legislature. The nine Republicans who are against Addicks assert that they would rather see the State unrepresented than misrepresented by him. A vacancy is certainly better than an ignominy. The nine anti-Addicks Republicans may yet save Sodom. In their present stand, it is to be hoped that they will have the countenance of President Roosevelt. Not to be compelled to receive a man like Addicks officially in the White House should surely be the wish of its occupant. Of course, the arch-corruptionist will move heaven and earth—or hell and earth—to compass his election. His contest in the Legislature will be watched by the whole country, and the hope of all honest men will be that Delaware may be spared the disgrace of Addicks, and that this particular bit of rotten wood may not have been swept along triumphantly on the Roosevelt flood.

Wisconsin was honored by more pre-election speculation, perhaps, than any other State. The riddles propounded since the third ticket was put in the field, however, have received very simple answers. Gov. La Follette has run 80,000 votes behind President Roosevelt, but it is plain that the prominence of the men participating in the bolting movement of Republicans led to a great overestimate of its strength. At the same time, the figures show clearly the indifference of the average Democrat this year to the fate of the national ticket. Every one agrees that a large part of La Follette's following is made up of "fair-minded Democrats," who would naturally be supposed to favor Parker. Yet, apparently, the national ticket interested them so little that they were unwilling to go even to the small trouble of marking a split ballot to help it out. In Milwaukee County the Socialist vote even ran ahead of the Democratic. La Follette plainly has secured the allegiance of a great part of the Wisconsin Democrats. The Stalwart faction did not, of course, vote for its own candidate, and it is probably immaterial as regards the future whether or not it keeps up its separate organization. The adoption of the new primary law, in any case, makes a contesting convention a thing of the past, so far as Wisconsin is concerned.

John A. Johnson, the successful Democratic candidate for Governor in Minnesota, was the son of a Swedish immigrant, and his youth was spent in the most abject poverty. Some ten days before the election, a campaign circular was sent broadcast stating that Johnson's father had died in the poorhouse and that his mother had taken in washing. The press of the State at once investigated the truth of this story. It appeared that the candidate's father had been a town loafer. The son had left school when ten years old to help support the family, and his mother had, it was true, taken in washing, but the father was put, by well-wishers of the family, where he would no longer be an incumbrance to it. The story of the boy's self-reliance and his success under so heavy a handicap not only destroyed the effect of the Republican slurs, but created such a revulsion of feeling in his favor as has never been seen in this country. In a State whose total vote is probably not more than 325,000, Johnson ran something like 140,000 ahead of the Presidential candidate of his party. The unexpected election of Douglas in Massachusetts was brought about by less than 15 per cent. of the voters splitting their tickets. In Minnesota, the incomplete returns indicate that nearly 23 per cent. marked their ballots for Roosevelt and Johnson—an exhibition of independent voting probably without a parallel.

In an election the most encouraging feature of which was its demonstration of the willingness of great bodies of voters to look farther than the party label, some of the faults of the ballot laws now in force also stand out strikingly. Maryland's electoral vote, for instance, will be divided. Why? Not because any voter in the State wanted seven of its votes to be cast for Parker and one for Roosevelt, but because, through ignorance and carelessness in marking ballots, the elector whose name came first on the Republican side ran ahead of the man at the tail of the Democratic column. The "will of the people" was that either Parker or Roosevelt should receive the undivided vote of the State. There are some voters, to be sure, who actually do scrutinize the individual names on the lists and vote against an elector on their own side whom they consider unfit. Thus, a single Cleveland elector was once chosen in Ohio because Republicans "scratched" an unpopular candidate of their own party. But the Maryland split means absolutely nothing. In this case it has no effect on the result, but if the close vote of 1876 should ever be repeated, a similar blunder might swing the casting vote. In this State the defeated candidate for Governor made ballot reform one of the issues of his campaign, and it is a subject which his successful opponent may take up to advantage. Higgins's majority was swollen without doubt, by our law, which puts a premium on straight-ticket voting. The Massachusetts plan removes this drawback, not by making it easy to vote a split ticket, but by making it hard to vote a straight one. Voting machines, which reduce to a minimum the mechanical difficulty of voting any sort or ticket and eliminate the spoiled ballot, were used this year more than ever before, both in our inland cities and in New Jersey, and there seems to have been no serious complaint of their working.

After a campaign remarkable for its thoroughness, it appears that the Constitutional amendment designed to give Chicago a new charter has been adopted in Illinois. That city had so far outgrown the system under which it was governed that the cartoon showing a strapping twenty-year-old girl dressed in a tattered, inadequate pinafore was an accurate description of the state of the municipal wardrobe. But, in order to get a new dress, the city was compelled to appeal to the State and secure the approval of the majority of all the voters who cast ballots for Presidential electors. New Yorkers are familiar with the general indifference of the country electorate towards the affairs considered vital to great cities; in Illinois, the "down-Staters" were appealed to in the course of the campaign by thousands of workers, and an "educational" bureau, backed by every organization of importance in Chicago, sent out millions of circulars. What has been won, by a close margin, is the privilege of submitting to Chicago itself, through a referendum provision, the proposal to consolidate some twelve taxing bodies now holding the levying power into one, to create a uniform system of municipal courts, to raise the debt limit, basing it upon the real value of taxable property instead of upon the appraised, and to wipe out completely the anomalous old township governments that have survived from the time when Chicago was but a small prairie village. It is a significant commentary on the awkwardness of strict State control over municipal government that Chicago has had to wait so long to be rescued from her plight.

Election being over, there is no rea-

son now why the Smoot case should not be pushed to a conclusion on reasonably non-partisan lines. But the abandonment of the trip of the Senate subcommittee to Utah does seem unfortunate, since the Mormon question in politics is still to be investigated. The Smoot proceedings, as a great many people seem never to realize, are not in any sense a repetition of the Roberts case of five years ago. If the Utah Senator is unseated, it must be on grounds which would apply equally to any high officer of his Church. The proof of Brigham Roberts's unfitness, according to American standards, to sit in the national legislature was simple enough: he had more than one wife. Smoot is a monogamist, of excellent personal reputation, and well thought of by his associates. The whole question is, "How far does his Church control him?" If the question is to be answered in a way that will convince the public, an immense amount of testimony, all indirect, must be sifted. It seems to be just the sort of question which ought to be investigated on the spot, and not in a city something like 2,000 miles away. In the matter of expense alone it would seem that inquiry at Salt Lake was almost obligatory.

The New York Presbytery on Monday voted almost unanimously not to unite with the Cumberland Presbyterian Church of the South, and the New Brunswick Presbytery defeated the proposal by a vote of 40 to 2. These decisions are the more remarkable in that they are against the recommendation of the Presbyterian General Assembly last June. It is to the credit of the Church that there are influential men in it who will not consent to a union which would draw the color line, and force negro Presbyterians into separate negro presbyteries. If there is one place where color prejudice is absolutely out of place, it is in churches erected to the glory of Him who hath made of one blood all nations of men. The attitude of some Southern churches in denying entrance to colored people, in refusing to allow them even to be married or buried by white ministers, must ever be a serious shock to those who still believe that all men stand upon one footing in the eyes of the Christian Church.

Reballoting in the Italian general elections has confirmed the Socialist defeat. In many constituencies Conservatives and Clericals united against the Ferri candidates. Most significantly, at Rome members of the Papal party, and even priests, were encouraged to vote against Ferri himself, who conducted a multiple candidacy, winning in Rome only, by a narrow majority. Florence, Genoa, and Milan all repudiated members prominently associated with the recent strike or otherwise connected with the Extreme Left. The general participation of Roman Catholics in the election makes it probable that a formal reconciliation between the Court and the Curia is among the possibilities. Indeed, the Holy See cannot afford to let the *non expedit* lapse by default. The occasion is opportune for a settlement. The Government needs Clerical votes; the Holy See needs the allowance which the Government has regularly put aside. But on the part of the Curia the opportunity may be brief. After Roman Catholics have become identified with the various political groups, or else have formed a solid Opposition, the Government may have lost either the motive or the mood to compose the quarrel. Meanwhile, though Giolitti has technically triumphed, the sources of his new majority are not apparent, nor can they be until the new President of the Chamber is elected.

With due ceremony was celebrated in Paris on October 30 the hundredth year since the adoption of the Code Civil. How vaingloriously Napoleon gave his own name to it, was implied in the discourse at the Sorbonne of the Minister of Justice. M. Vallé traced the growth of the unifying process in the laws and jurisdictions of France back to an early day, and showed how Chancellor after Chancellor and report after report had led up to the work of the Convention. To call it Bonaparte's would be as erroneous as was Mr. Gladstone's description of the American Constitution as wholly a product of the men who wrought over the old material at Philadelphia. The Minister of Justice admitted that Napoleon ordered the jurisconsults about their work as if they were so many corps commanders under him, and that his personal views were stamped upon the articles relating to marriage and to foreigners; but he concluded: "Despite these personal creations of Bonaparte, which have been, moreover, largely effaced by subsequent legislation, the Code of 1804 was declared, and appeared to the world to be, the legal consequence of the French Revolution." The President of the Court of Cassation, in his centenary address, dwelt frankly upon the function of judges in enlarging the Code under the guise of enforcing it. He referred to the "free interpretation" and "complementary decisions" which had changed certain parts of the Code into something to make its original framers stare and gasp. Ingeniously stating the point of view of a judge given the task of finding warrant for new practices in old prescriptions, Presiding Judge Ballot-Beaupré said that the judicial interpreter "ought not obstinately to inquire what was, a hundred years ago, the thought of the authors of the Code, but to ask how they would have drafted a disputed article if they had it to do today, since both justice and reason required that the text ought to be liberally and humanely adapted to the exigencies of modern life."

Another professor has shown that he is not fit for practical statesmanship. This time it is the eminent Austrian economist, Professor Boehm-Bawerk. He has just been forced to retire from the Koerber Cabinet, in which he held the portfolio of Minister of Finance. What was the complaint? That he had been too doctrinaire—had indulged in financial whimsies? No, the infatuated man had made the capital mistake of trying to economize. This was bad enough, and showed that the professor was dwelling among the dust and cobwebs of an exploded theory of government finance; but when we add that he proposed to effect his economies in the expenditures for the army and navy, we need look no further for the cause of his fall. The Admiralty said, of course, that it could not take a crown less, and naturally Boehm-Bawerk had to go back to his lectures. His financial theory is admired throughout the world, but applied finance—especially the application of the obsolete doctrine of economy—was not for the likes of him.

Terms of the new Japanese loan, as announced from London last week, do not suggest progressive impairment of the country's credit. The loan of last April was made specifically a first lien on the Japanese customs revenue. At the time, Japan was criticised for pledging the whole of that revenue when the interest on the loan was less than one-half of it, and it was generally thought that the next loan would have to be guaranteed by some other security. But the new loan, though for a larger sum than that of April, is to be secured merely by a subordinate lien on the same customs revenue. Furthermore, it is to be offered to the public at 90½ in London, as against 93½ asked for the loan of April. When the magnitude of the loan —$60,000,000—is considered, and the fact that its ultimate security is inferior to that enjoyed by its predecessor, it must be said that the price at which the bankers take the loan is pretty good testimany to their faith in the Japanese Government's credit. Even Great Britain, whose consols issue of 1901 was sold at 94½, had to reduce the price to 93½ in the loan of 1902. It is true that the 6 per cent. interest rate and the special lien on revenue have all along made Japan's bid for foreign capital unusually tempting. It has cost her more to borrow, since the war began, than it costs Russia. But it can hardly be said, in the light of the latest announcement, that Japanese credit is declining.

APATHY.

The magnitude of Mr. Roosevelt's majority looms the bigger as rising out of the flat level of the electoral contest. Everybody must have thought the chances in his favor; the more sanguine may have looked for an aggregate of votes in the College closely approximating that which will actually be cast; but the "landslide," to use the favorite journalistic metaphor, has taken the country by surprise—both those who were buried under and those who were a part of it. The perplexing listlessness that characterized the canvass did not prepare the public mind for such a full polling, for such unheard-of majorities.

There was something ominous in the absence of a lively interest, and of those enthusiastic demonstrations which would so well have befitted the Republican chief. Mr. Roosevelt himself must have looked for some boisterous signs of that popularity of which he felt assured. Could it be that his strenuous candidacy would elicit the required support with no more stir and bustle than the peaceful fall of the ballot snowflakes which execute the freeman's will? Can such great things be done in quiet? And, now that the popular will has rolled his way in such a mighty tide, can the President be certain that he drew it after him; or may we conclude, like Tolstoy in his explanation of the Napoleonic flux and reflux from Paris to Moscow, that the great commander counted for nothing in the mysterious impulse of the multitude to rush in a particular direction? We may trust Mr. Roosevelt to take the benefit of the doubt.

Twenty reasons could readily be adduced for the Democratic defeat; two or three suggest themselves for the antecedent apathy. There was, for one thing, no need to get excited over prospective danger to the republic in case of Democratic success. Judge Parker, by one decisive act of courage and abnegation, had removed the currency as a possible source of peril, and also as a bone of contention during the campaign. His own calm and equipose, added to his person being unfamiliar to any but the few thousands who heard him on the stump in a narrow territory, forbade an ardent following calculated to inflame the other side. Moreover, his own party was much divided and grudgingly loyal, was deficient in organization, and pursued no single, consistent, weighty line of attack upon the *status quo*, which has always in itself a strong rallying power. All these considerations lay upon the surface, and were a check on Republican anxiety and over-exertion.

They probably did not, however, enter consciously into the determination of the mass to vote as they did. Their minds were made up, and stood in little need of discussion or spectacular incitement. Their apathy was not mental, precisely, but moral. They had not the least desire to rebuke the Administration for its inherited policy, or for those original acts of national dishonor which have renewed the blush of patriots. Their side-taking was in the gross. They did not say, for example, while Judge Parker's renunciation of a second term was ringing in their ears, that they saw nothing indecent in President Roosevelt's proclaiming his intentions, while his predecessor was hardly cold in his grave, to seek reëlection, and coming to a friendly understanding with Odell that the latter would not go counter to this ambition. They did not forgive this indecency—they probably just forgot, if they ever noticed it. They passed over in the same way his active direction of the late canvass, and his free shuffling of his Cabinet in search of electioneering lieutenants. They in effect approved what we may question their readiness to cast an express ballot for on the ground of propriety, to say nothing of principle—his previous adhesion to Addicks in Delaware, his rigging of a dishonest compromise in the same State on the eve of the election, all with a view to consolidate his hold upon a majority in his own behalf. They accepted Pension Order No. 78, equally designed to propitiate a class of voters while intensifying the evils of the pension system itself.

On the subjects of Imperialism, of an overgrown army and navy, of the mode in which we acquired the Isthmus, the majority of Northern voters have proved not less compliant. They are either indifferent, or they assent in varying degrees, or they condone with a plenary indulgence. They have cast a blanket ballot covering the entire Republican creed in its latest form, the acts of the Administration as a whole, and of Mr. Roosevelt in particular. They have done so tranquilly and emphatically. They have not borne even the testimony of abstinence from the polls. In augmented numbers they have silently marched up to the urn, with more emotion on learning of their enormous victory than they experienced from any contemplation of the principles at stake.

In such a picture there is much discouragement for those whose hearts are set on higher aims. They witness no such revival of tone as attended the two Cleveland successes, but a falling off profoundly significant of moral deterioration. It is small consolation that the Independents did not stand together, and that such of them as mounted with the wave that bore Mr. Roosevelt once more to the White House, may four years hence return to their proper ranks. The verdict just rendered is, all deductions made, a logical prelude to still lower depths of national self-satisfaction and torpidity of conscience—subject to the unexpected, which has, in our American history, more than once seen the hour of triumph of the Worse succeeded swiftly by that of the Better.

IS IT NOT TIME?

The marked increase in the distinctively Socialistic party led by Debs, as evinced on November 8, may portend local rearrangement and disturbance of party lines, with a natural legislative truckling to Socialistic demands. Exactly what took place in Massachusetts is still a matter of debate, though the fortunate Democratic candidate for Governor thought he was conducting the fight for tariff reduction through reciprocity. He appears to have had a large Labor backing, so that the full dinner-pails were guilty of the inconsistency of voting with the one hand for Douglas and lower duties, with the other for Roosevelt and the highest tariff on earth. His opponent, the present incumbent, Governor Bates, had incurred Labor's animosity by vetoing an Overtime bill not to be commended; and it is likely that this act of manly independence accounts more for his defeat at the hands of trade-unionists than any comprehension on their part of tariff iniquity.

Both the Socialistic and the Labor movements, which have a bond of union in the protectionist principle, must be reckoned with, no doubt; but they do not yet bulk sufficiently at the polls. The South offers by far the most interesting problem growing out of the re-election of Mr. Roosevelt. That section has been eaten into on the northern border, till now of the old slave States Delaware, Maryland, West Virginia, and Missouri are so far detached that they cannot be counted upon to make common cause in national policy with the rest of the once united territory. Mr. Roosevelt could even have dispensed with these accessions, which are likely to multiply with changes in Southern population through industrial growth; and the coherent South is fairly to be regarded henceforth as a negligible quantity. Mr. Roosevelt erased it from his thoughts, for hope or fear, when it turned upon him for controlling his own hospitality, nominating a few black men to Federal office, and standing by those persecuted by the mob. The disfranchisers have virtually become disfranchised in their Federal aspect, and more and more it must be difficult to call out a full vote south of Mason and Dixon's line—south of the Potomac, as we may now say. There is little pleasure in voting with a cooked and inevitable majority, especially when it has no effect on the national show of hands. The composition of President Roosevelt's electoral vote postpones indefinitely the chance of a Southern man—*i. e.*, a native of the South, with Southern princi-

ples—securing a nomination for the Presidency.

The solidity of the Southern remnant in isolated and futile support of Judge Parker points to the opportunity of leaving in its hands the name and style of Democratic party, and of forming a new combination with a few definite purposes, or even with one, under another designation. The position is this: At the South we have a population clinging to a fixed idea, white supremacy and negrophobia, which tinges their view of every public question even remotely bearing on the relations of the two races; which determines their collective action in Congress, and leads them to barter their miscellaneous principles for the withdrawal or defeat of obnoxious measures. At the North we have the Republican party, equally possessed with a fixed idea, Protection, and equally ready to traffic in human rights if need be. The Southern idol is a relic of slavery; the Republican is its legitimate successor as the greatest source of corruption the country has ever known. What is wanted is a third party (for the present) to put forth a clear, unambiguous programme that will not lose itself in the belly of a stump speech disguised as a party platform, and that has nothing to barter. Such a party can begin in the States, and can have for its function to force the issue upon public attention, and breed the politicians who will eventually argue its cause in Congress. To all appearances, Mr. Douglas—whose anti-tariff views spring from local conditions and necessities—might have succeeded in Massachusetts as the head of a party thus circumscribed and concentrated; the regulation platform on which he stood was perhaps worth no more to him than that of the Democrats of Missouri to Mr. Folk, who had made a sufficiently broad plank for himself and his fellow-reformers out of the crusade against graft and boodle.

For our own part we consider Free Trade the most promising and the most essential creed for a new political organization. With it no Imperialist can be in sympathy, and anti-Imperialism is implicitly contained in it. Civil-service reform likewise stands pat with opposition to special privilege. Freedom is what this country has gone on denying itself, till our daily relations have become a struggle for escape from the clutch of forces that would order us where to buy, what to pay, and whom to employ, what to do and what to refrain from doing with our own hands. These forces, whether Trusts or trade-unions, are intrenched in the tariff, or at least in the principle of protection and monopoly; the directest assault upon them is through discussion of that question in season and out of season. Let us start that discussion at the North, as educators, without ulterior aims, forsaking reliance at once upon the South and upon Tammany, abandoning the hope of immediate preferment, and trusting to the capacity of the American people to be regained not only to humanitarian idealism, but to recognition of their demonstrable material interest. Is it not time to drop the name of Democracy, as an effete shibboleth for practical ends, and to favor the disintegration of the party when left to the machine and the South, with the virtue gone out of it? Is there likely to be any more propitious hour than the present, amid the profound humiliation resulting from the latest attempt to restore the old landmarks of human rights, and orderly procedure by law, and international good-faith and brotherhood, through the instrumentality of a heterogeneous and discordant body of voters contending for divers issues, and "wanting wisdom," if not wholly "void of right"?

BEREA COLLEGE AND THE NEGRO.

When Berea College opened its doors this fall, it was forced, for the first time in nearly forty years, to admit only white students. By an act of the Kentucky Legislature, it had been decreed that no person, corporation, or association of persons should maintain or operate any school or institution with persons of both the white and negro races as scholars, under penalty of a fine of $1,000, and also of $100 for every day of operation. White persons attending such a school, or teaching in it, were to be fined $50 for each day. A colored branch of a white school may be maintained, but not nearer than twenty-five miles. In the eyes of the Legislature, twenty-four would mean contamination—a dangerous proximity of races that yet have to work and live side by side.

Although in the form of a general bill, this law was aimed exclusively at Berea—not, however, because of any scandals among its black and white pupils. Its offending may have been that its success in educating whites and blacks side by side was contrary to the doctrine of white superiority, and tended to disprove the theory that equality of scholastic opportunity would mean the degradation of the white race. At all events, Berea's colored pupils are now scattered far and wide. As the *Berea Quarterly* reports, they are now attending colored public schools, or have been sent to Fisk University and other reputable institutions. The arrangement, it is reported, is working as well as could be expected. The sympathy of the friends of the school has been won as never before, and it is needed, for the law amounts to a confiscation of a large part of the institution's resources, since it has had to assume extra expenses for the colored students by paying their railroad fares, part of their higher tuition, etc.

Naturally, this is only a temporary state of affairs. Berea, having brought a formal violation of the law to the attention of the State officials, a friendly suit to test the constitutionality of the act has been begun, both sides agreeing to obtain a decision from the highest courts as speedily as possible. On its face, the law appears wholly unconstitutional. As the *Quarterly* remarks: "It invades the sanctities of personal liberty, and, if allowed to stand, would curtail the inalienable rights and liberties of white and colored alike." The head of the law department in a Southern State school has written a private letter congratulating Berea's trustees upon their stand, denouncing the law as "outrageously unconstitutional," and declaring that their struggle is not for their own liberty, but "one for the liberty of every citizen." Moreover, the action of the Legislature was "ruthless and inconsiderate." Officers of the State circulated gross misrepresentations, and both House and Senate declined to send committees to investigate the college, which is the one important school in Kentucky open to the negroes, and which has done work of inestimable value in spreading knowledge among the pitifully ignorant mountain whites.

Highly significant is the fact that many members of the Legislature told President Frost that they were opposed to the bill, but that "the controlling element had determined to push it through, and that any man who voted in opposition would have the 'nigger question' brought up against him in all his future career." It was the old story of "bulldozing" good citizens by the politicians, who seek to make capital out of race prejudice. This explains why thousands of high-minded Southern white people who are opposed to attacks upon the negro, are silent in the presence of the ignorant, blatant, and violent portion of the community. In the case of Berea, the evidence accumulates that the attack upon it was due to instructions received from politicians further south.

It is possible that the Southern leaders will now deem it worth while to cease harping upon this one string, and that the better elements in their constituencies will see that attacks upon the negro are the greatest menace to the South's political and national influence. Whether the Tillmans, "Jeff" Davises, and John Temple Graveses can be muzzled or not, Berea's white students have no hesitation in expressing their view, independent of politicians or of those who are the victims of unconquerable prejudice. We take from their resolutions of sympathy just voted the following passages, which we commend particularly to the good but timid members of the Kentucky Legislature:

"Friends and Fellow-students: As we

meet for the first time under new conditions to enjoy the great privileges of Berea College, we think at once of you who are now deprived of these privileges. Our sense of justice shows us that others have the same rights as ourselves, and the teachings of Christ lead us to 'remember them that are in bonds as bound with them.'

"We realize that you are excluded from the class-rooms of Berea College, which we so highly prize, by no fault of your own, and that this hardship is a part of a long line of deprivations under which you live. Because you were born in a race long oppressed and largely untaught and undeveloped, heartless people feel more free to do you wrong, and thoughtless people meet your attempts at self-improvement with indifference or scorn. Even good people sometimes fear to recognize your worth, or take your part in a neighborly way, because of the violence of the prejudices around us.

"We are glad that we have known you, or known about you, and that we know you are rising above all discouragements, and showing a capacity and a character that give promise for your people. . . . And you will always have our friendship, and the friendship of the best people throughout the world. We hope never to be afraid or ashamed to show our approval of any colored person who has the character and worth of most of the colored students of Berea. We are glad that the college is providing funds to assist you in continuing your education, and we are sure the institution will find ways in which to do its full duty by the colored race."

THE HOPE OF PEACE.

Lord Lansdowne's speech at the Guildhall on November 9 covered much of the ground of Mr. Balfour's recent Southampton address, but with a notable difference of tone. Mr. Balfour, while advocating a judicial settlement of the controversy with Russia, took almost a belligerent attitude towards her and treated her admiral's story with cavalier scorn. Lord Lansdowne, on the other hand, pleaded for universal arbitration. Upon the terrible spectacle of the death struggle in the Far East, and upon the responsibility of those who lightly plunge a nation into war, he dwelt with real eloquence. "We can," he said, "conceive no more terrible punishment than the remorse of any minister or body of ministers who, from loss of temper or desire of popularity, bring upon a country the scourge and calamity of needless war." Do not these words express the very temper of the conscience that brought Mr. Balfour, and with him the British Empire, safely out of the most perilous imbroglio diplomacy has recently known? To prove the point that arbitration is now *à la mode*, Lord Lansdowne reminded his audience that he had signed no less than five treaties of this sort. He might have added that M. Delcassé, from the Quai d'Orsay, was pressing the British record hard, and that Mr. Hay is likely to be a formidable rival in the future.

Lord Lansdowne uttered a pious hope that Japan and Russia may seek an umpire of their quarrel. If we could put national passions and hurt pride aside, every argument of common sense as well as humanity would dictate a reference of the whole ensanguined controversy to arbitration. Something of the kind will finally be necessary, in any event. Not if either Russia or Japan should prove completely triumphant, could the Powers leave the victor to make terms of peace alone. The motives which led to the revision of the treaty of San Stefano by the Congress of Berlin, and to the denial to Japan of the fruits of victory in her war with China, would be of redoubled weight in preventing a one-sided adjustment in the Far East. The interests involved are too vast. There is the whole question of the future of China. Is it to be broken up territorially? Is it to be put under military tutelage, and made to equip a huge army at once to crush still lower its swarming millions and to add another threat to the world's peace? Or is China to be neutralized like Belgium and Switzerland, and to be left to run its own course of development without fear of aggression, or of having its territory still further nibbled away piecemeal?

These high problems of world-statesmanship would, in any case, have to come before either the Hague Tribunal or a congress of the Powers. To take them up now, instead of waiting for the war to drag on into new miseries, would be the aim of mediation. That the United States should be so generally indicated as the most eligible mediator, is due to the fact that this country occupies the most disinterested position. It is known that we have no territorial ambitions in China. We are prepared to go far for equal opportunities of trade in the Orient, and for all necessary guarantees of religious freedom, but would not stir a step to gain a foot of soil there. Standing thus for no privileges in which all would not share, the United States is peculiarly fitted to take the lead in proposing a cessation of bloodshed in the East, and in inviting the nations to sit down in friendly counsel for the peaceful settlement of the complicated and enormously important questions affecting the fate of Eastern Asia. It is a magnificent opportunity for President Roosevelt. King Edward has been called "the lightning conductor of Europe," on account of his labors for peace; but if Mr. Roosevelt could safely discharge the war clouds in the East of their death-dealing electricity, it would be in order for some orator to apply to him Mirabeau's praise of Franklin. A mediating offer by America would be certain to have the cordial support of both France and England. M. Delcassé's utterances and activity, with Lord Lansdowne's speech, remove all doubt on that point.

If the war goes on in spite of all, it will be a melancholy reflection upon the impotence of civilization. It will be as if humanity stood by, wringing its hands helplessly, while thousands of men went to cruel and needless deaths. The Japanese Minister in London states but the general conviction when he says that neither of the nations at war has any prospect of conquering the other. In these circumstances, for the terrible destruction of life to go blindly forward, would be to invite a repetition of Fox's burst of savage satire upon the rejection of Napoleon's peace overtures in 1799. It was said that more time was necessary —a "pause," in order to see if France would be "reasonable." Fox pictured a spectator at a needless battle, and the explanation of it that would be made to him:

> "You are quite wrong, sir. You deceive yourself—they are not fighting. Do not disturb them—they are merely pausing. This man is not expiring with agony, that man is not dead—he is only pausing. Lord help you, sir, they are not angry with one another—they have now no cause of quarrel; but their country thinks there should be a pause. All that you see, sir, is nothing like fighting—there is no harm, nor cruelty, nor bloodshed in it whatever—it is nothing more than a political pause—it is merely to try an experiment—to see whether Bonaparte will not behave himself better than heretofore."

Every humane man must pray that no such wanton prolongation of a fruitless war may now occur.

STERNE IN THE DICTIONARY OF NATIONAL BIOGRAPHY.

NEW HAVEN, November 1, 1904.

On receiving a copy of the 'Errata' supplement to the Dictionary of National Biography the other day, it occurred to me that it might be worth while to test the work in various places as it now stands with the errors corrected. Among the articles chosen was that on Laurence Sterne, the author of 'Tristram Shandy.' In the errata to this article we are told to read—in their appropriate places—Riston for Ritson, Charters for MSS., and Tollerton for Totteston. This is all. The sketch of Sterne was written by the editor-in-chief, Mr. Sidney Lee, and was based to some extent upon unpublished Sterne MSS. in the British Museum and elsewhere. Copies of some of these MSS. have recently passed through my hands on their way to a publishing house that is about to bring out a new edition of Sterne. Hence, I am able to follow the author of the article in question rather closely. Some of the results of the pursuit may be of interest. The double numerals placed in parenthesis after quotations refer to page and column in the fifty-fourth volume of the Dictionary of National Biography.

"A large second edition of 'Tristram' was published in April [1760] . . . In the same month there appeared fifteen 'Sermons of Mr. Yorick' " (207, 2). The 'Sermons' appeared on May 22 (*London Chronicle*, May 22-24).

"He [Sterne] preached in the cathedral on the 18th [May, 1760] . . . At the same date he had the good fortune to receive from his old friend Lord Fauconberg an offer of the perpetual curacy of Coxwold" (208, 2). This statement, to say the least, is loose, for the Coxwold living was offered to Sterne in the middle of the preceding March. See the seventh letter to Miss Fourmantelle (Bickers Edition of Sterne), and the letter of John Croft to Caleb Whitefoord (Whitefoord Papers). The present-

ment to the curacy was formally announced among the ecclesiastical preferments in the *London Magazine* for April.

"The three volumes [the last volume of 'Tristram Shandy' and two new volumes of sermons] appeared in January, 1767" (211, 1-2). The date is correct for 'Shandy,' but this instalment of the sermons was published one year earlier, on January 18, 1766 (*Lloyd's Evening Post*, January 17-19). The volumes themselves bear the date of 1766, to say nothing of Sterne's referring late in 1765 to the forthcoming publication.

It is said that at the end of August, 1767, Sterne's wife and "dear girl" arrived at Coxwold from France (213, 1). They were expected on that date, but they did not reach York till September 30, or October 1. They planned to set out from York for Coxwold on October 2. (Letter to Panchaud, dated York, October 1, 1767.)

It is stated that Sterne first met Mrs. Draper, the famous Eliza, at the Jameses,' in Gerrard Street, Soho, London, "late in December, 1766" (211, 2). At that time Sterne was still in the North. He wrote from Coxwold, on December 20, to a Mr. W. in London that he was going to York to recruit himself before setting out for London. It is not probable that he reached London until some time in January. The acquaintance with the Jameses, at least with Mrs. Draper, thus seems to date from the middle of that month.

"In June, 1775, the widowed Madame de Medalle arrived in London, and published, as a substitute for a biography, her father's letters" (215, 1). The dedication bears the date of June, but publication was delayed until October 25 (*London Chronicle*, Oct. 24-26).

"Her [Mrs. Draper's] pride in her relations with Sterne revived, and in 1775—the year in which Sterne's daughter published some of his correspondence without making any reference to her—she authorized the publication, under the title of 'Letters of Yorick to Eliza,' of ten letters that Sterne had addressed to her between December, 1766, and April, 1767" (215, 2). It is implied here that Mrs. Draper's volume appeared after the publication of the general correspondence under the editorship of Sterne's daughter. Indeed, this is the order given in the Sterne bibliography (219, 2). The contrary is the fact. The 'Letters from Yorick to Eliza'—not 'Letters of Yorick to Eliza'—were published in February (*Lloyd's Evening Post*, February 20-22). The date given by Mr. Lee for the first letter from Sterne to Mrs. Draper has already been shown impossible, for Sterne was not to meet her for a month or so yet. The letter evidently belongs to the last week in January, 1767, just after the appearance of the last volume of 'Shandy.'

Of the three series of letters that appeared under Sterne's name in 1775, the volume entitled 'Twelve Letters to his Friends on Various Occasions' is placed third in order of publication (219. 2). It should come second. It was published on July 12 (*London Chronicle*, July 11-12). This would seem a small matter, did not Mr. Lee make critical use of the order in which Sterne's letters appeared.

We are informed that in the 'Seven Letters Written by Sterne and his Friends,' edited in 1844 by W. Durant Cooper, "one only is by Sterne" (219.2). The collection contains two letters by Sterne.

"The unpublished Journal to Eliza was for many years in the possession of Mr. Thomas Washbourne Gibbs of Bath, who lent it to Thackeray in 1851, when he was lecturing on Sterne. Thackeray made no use of it" (220.2). The Journal was lent to Thackeray before he gave his lecture on Sterne and Goldsmith. Thackeray thanked Mr. Gibbs on May 31 for the offer to send him the MSS. It is to be presumed that the MSS. arrived the following week. The lecture on Sterne and Goldsmith was first read at Willis's Rooms on July 3 (*Times* for July 4). On September 12 Thackeray wrote Mr. Gibbs a letter of some length, giving his impressions of the Journal. Thackeray "made no use" of the Journal only in the sense that it was not mentioned in the lecture. In "Notes of a Week's Holiday," a "Roundabout" that appeared in *Cornhill* for November, 1860, Thackeray made the Journal the basis for a terrific attack on Sterne. (Thackeray's letters to Mr. Gibbs are in the British Museum with the Sterne MSS.)

It is said that to the MSS. of the Journal to Eliza are attached "draft letters from Sterne to Daniel Draper and to the Jameses" (220.2). The letters to the Jameses—dated respectively August 10 and December 28, 1767—are not drafts that were afterward elaborated. They are the very letters that were sent to the Jameses. One of them is franked by Lord Fauconberg, Sterne's patron in the North, and the other has passed through the mails. The corresponding letters in the printed collections, which Mr. Lee regards as the finished forms, are nothing but mutilations of these originals attached to the Journal.

"The earliest biographical notice of Sterne is that by his friend Hall-Stevenson prefixed to the spurious continuation of the Sentimental Journey" (221.1). The first biographical notice of Sterne came from the pen of Dr. John Hill, a literary hack and quack doctor, widely known in his time for various herb tinctures, "excellent beyond parallel." It appeared in various London newspapers during the first week in May, 1760, while Sterne was in London enjoying his fresh fame. Sterne himself refers to it in a letter from London to Stephen Croft, dated May, 1760.

In this list of mistakes I do not profess to be exhaustive. Indeed I have passed over minor slips of the kind that are corrected in the 'Errata.' For example, the date given for Hédouin's translation of the 'Sentimental Journey' into French should be 1875 instead of 1895 (220.1). See the 'Catalogue de la Librairie Française' (1866-75). Likewise, the *Magazine of Indian Art* (220.2) must be intended for the *Journal of Indian Art*. At any rate I can discover no *Magazine of Indian Art*.

WILBUR L. CROSS.

BARON HUEBNER'S SOUVENIRS.—II.

PARIS, October 23, 1904.

It was Hübner's fixed idea that the Imperial régime had its strongest support in the army. When a decree of Napoleon concerning the reorganization of the French troops divided them into five great commands, each confided to a Marshal of France, and having their headquarters at Paris, Nancy, Lyons, Toulouse, and Tours, he says:

"The army is more and more considered at the Tuileries as the only and true basis of the Imperial régime. To assure himself of the army by its chiefs, and of the chiefs by means which are at the disposal of the sovereign, is evidently the inner thought of the Emperor Napoleon. After all, it is in conformity with the situation. France is the *Bas-Empire* in its beginnings; as for the future, *qui vivra verra*."

Hübner did not attach much importance to the opposition of the salons, and did not think they would have any influence on the course of events.

"They nourish themselves with memories more than with hopes, sometimes with epigrams; but politically, in reality, they do not count. They are not wanting in brains, nor in elevated sentiments, still less in grand manners, which are nowhere better preserved than in this noble *milieu;* but it is their enforced detachment from the affairs of the country for two generations which weighs heavily on the greater part of the French aristocracy."

Hübner used to spend much of his time in these salons; he found their feelings more in harmony with his own. This was not unknown at the Tuileries, and there was a sort of armed neutrality between him and the official world. Hübner was well aware of the divisions among the ministers. One day, Fould, the Minister of Finance, tells him:

"I am not Minister of Foreign Affairs, and it is not my place to talk to you of outside matters. However, for my part, I cannot conceal from you that I detest the cabinet and the policy of Cavour. He is a little Mazzinian, who, if necessary, would be our enemy as decidedly as Mazzini. The Emperor does not understand him yet, he is still a little liberal; but such is my conviction, and I do not conceal it from him."

There were constant rivalries in the entourage of the Emperor, and the ministers seemed to take Hübner as a confidant. Drouyn de l'Huys does not hesitate to tell him, on leaving the Foreign Office, that he absolutely condemns the foreign policy of his master. "What a flow of words," says Hübner in speaking of him; "what cataracts of thoughts, often original, sometimes deep, always calling for reflection, if only sufficient time were given to reflect! But how would it be possible to follow them? Such is his wealth of ideas that he often finds with the greatest facility arguments for the most opposite views. After all, he persuades more than he convinces." Many such portraits are drawn by Hübner; they denote great power of observation as well as talent for writing. He often shows exceptional capacity for irony; for instance, when speaking of the trial of Orsini, he says: "All the great ladies, Russian and Polish, who thronged the benches of the court, are in love with him; they admire his beauty, his courage, his resignation. The Empress also lost her head for this assassin, who wears straw-colored gloves." Orsini makes a political speech in favor of Italy and against Austria. His lawyer, Jules Favre, read a letter which Orsini had written to the Emperor (who, says Hübner, ought not to have authorized the reading of it), in which was this phrase: "Your Majesty must remember that as long as Italy is not independent, the tranquillity of Italy and of your Majesty will be a mere chimera." "Is that clear enough?" asks Hübner. Yes, it was clear, and the Italian question became the question of the day. Its development, the intrigues connected with it, the vicissitudes of the negotiations, the waverings of the Emperor, the divisions

among his advisers and ministers, are, as it were, a preface to the greatest events of the Second Empire.

Hübner often got his best information from his diplomatic colleagues. Lord Cowley, the English Ambassador, once gave him an account of a conversation with Napoleon:

"The Emperor regrets to have been obliged to consent to the execution of Orsini, for he greatly admires the calm and coolness with which this bandit died. The Ambassador combated these sympathies. . . . Lord Cowley thinks, as I myself do, that the influences of the national Italian party, in which the Emperor reckons many personal friends, have agitated his Majesty, temporarily turned his attention towards Italian affairs, and renewed his ill humor towards Austria, because he feels that it is impossible for him to realize the hopes of the national Italian party so long as Austria keeps the Lombardo-Venetian kingdom, and that it is equally impossible for him to turn us out of it."

In speaking of the affairs of Rome, the Emperor said to Lord Cowley:

"You have no idea how difficult it is to treat with the Pope. Before bringing him back from Gaeta to Rome, we wished to make some conditions. He answered us: 'Leave me on this rock, expose me on a desert island, I will always remain Pope.' In the end, we found ourselves obliged to beg him to return to Rome, under the protection of our soldiers, but without any conditions."

The Emperor seemed to regret being obliged to leave troops in the States of the Church: "It is a bad policy, but the Pope needs some support in Rome, and if not myself, it would be Austria." At a dinner at the Duke Decazes's, Hübner meets the Duchess de Dino, "still preserving, at the age of seventy-seven, traces of her beauty." (The publication of the letters of the Duchess de Dino in the Letters and Correspondence of Barante shows her to have been a very able person.) He meets at the same dinner Count Kisseleff, the Russian Ambassador, and Drouyn de l'Huys, who again gives him his opinion of Napoleon:

"He has immense desires and limited faculties. He wants to do extraordinary things and does only extravagant things. He plays with England and Austria, and treats them as he did the Parliamentarians before the *Coup d'État*. He asked Austria to change the circumscriptions of Italy; on your refusal, he turned towards Russia and asked for impracticable things; then came the turn of England. As he gets negative answers everywhere, he is tempted to go somewhere else, and meanwhile he is coquetting with Cavour."

Hübner was not yet quite aware that Napoleon had his own secret diplomacy; he understood this better afterwards, and wrote:

"The man least initiated in the views of his master was generally his Minister of Foreign Affairs. Nobody ever was so little so as Count Walewski. I will cite only one example. One day, the Prince de la Tour d'Auvergne presented himself at Cavour's, in order to have him read, by the injunction of his chief, a dispatch, approved by the Emperor, which contained rather strong complaints of the conduct of the Sardinian minister. 'My dear Prince,' said Cavour, with a smile, 'don't take the trouble to read me this dispatch. The Emperor has written to me. His letter is in this drawer. I know what to think about it all.'"

Cavour had an interview with Napoleon at Plombières. A profound mystery long surrounded the conversation, which took place in that little watering-place in the Vosges. The Italian war was there resolved on, as is clearly shown by a letter of Cavour to Victor Emanuel, written from Baden on the 24th of July, 1858, and published in the second edition of the 'Lettere di Camillo Cavour' (Turin, 1884). All possible eventualities were foreseen. The Emperor admitted that the Austrians were to be turned out of Italy. The valley of the Po, the Romagnas and the Legations were to constitute the Kingdom of Northern Italy under the House of Savoy. The Pope should keep Rome, with the surrounding territory. Tuscany, with some of the Papal States, was to form a Kingdom of Central Italy. As for the sovereigns who were to be placed in Florence and in Naples, the question was left in suspense. "However, the Emperor did not conceal the fact that it would give him pleasure to see Murat reascend the throne of Naples." The Emperor, having decided the future state of Italy, asked Cavour what would be the gain for France; would Victor Emanuel make a cession of Savoy and of Nice? Cavour said his King was ready to make this sacrifice, though he would abandon with reluctance a country which was the birthplace of his family and had given it so many proofs of affection and devotion. Everything was foreseen—the number of the troops which were to enter Italy, the financial question. At the end of the conversation, the Emperor asked what were the intentions of Victor Emanuel with regard to the marriage of Prince Napoleon with Princess Clotilde. Cavour could give only an evasive answer, but he advised his King to accept this family alliance, though it was not made a *sine qua non* of the political alliance.

We now come to the famous reception at the Tuileries which was, in one sense, the first signal of the Italian war. On the 1st of January, 1859, the Emperor received as usual the diplomatic body. He first spoke, according to an old rule, to the Papal Nuncio, and said to him: "I hope that this new year will only cement our alliance for the happiness of the peoples and for the peace of Europe"; then, arriving before Count Hübner, he said, with an air of *bonhomie*. "I regret that our relations should not be as good as I could desire, but I beg you to write to Vienna that my personal sentiments for the Emperor are always the same." These words were like a thunderbolt from a blue sky, and were immediately repeated all over Paris. The ambassadors themselves were reticent, and tried to explain the imperial words in a favorable sense; their secretaries were less prudent. In the evening, Paris was in a sort of panic, and the next day the Bourse was thrown into the wildest confusion.

Hübner met Thiers in the Champs-Élysées and had a walk with him. "He told me that he had just left M. and Madame Walewski, and that he had tried to make them understand that it would be insane to separate from Austria and to reform the Holy Alliance. "I have," he said, "given them reasons for the maintenance of peace —reasons which I cannot give to you, a foreigner." After a confused period of hopes and fears, of proposals and counterproposals, war was decided on. At the beginning of March, Hübner received orders to leave France and to ask for his passports.

Correspondence.

MONEY IN THE CAMPAIGN.

To the Editor of The Nation:

Sir: Though in the late election we stood on opposite sides, you ought to be as glad as myself at the phenomenal majority given to Mr. Roosevelt in the thirty-four States outside of the Southern Confederacy —altogether over nineteeen hundred thousand; his carrying Maryland and Missouri, and thus breaking up the solid South, while in Kentucky he loses by only ten thousand, and even thus only by reason of two acts which you approve as much as I do—the lunch with Booker Washington and the stand he took as to the Indianola postoffice.

These overwhelming figures are proof of one thing: the victory was not bought, either with the money of the Trusts or with any other money. There was one election in which money laid out in bribing voters played an important part, namely, that of Garfield and Arthur in 1880. The efforts of the Republicans were centred on the Indiana October contest; the aim was to overcome the majority of between six and seven thousand given to the Democratic State ticket in October, 1876, and this end was attained, but not without filling the whole country with an outcry about "blocks of five" and about new, crisp two-dollar bills. If anything of the kind had been done this year the country would have known it. Or, again, we had in 1896 an exhibition of what the British call the legitimate influence of wealth—that is, the managers of all the railroads and great industries, particularly the iron industries, told their workingmen very emphatically: "Boys, under the secret-ballot law, we can never find out whether you vote for Bryan or not; but we can tell you, if Bryan is elected, we are bankrupt and we shall have to shut down." This course of the great captains of industry had its effect; but in this year there was nothing of the kind seen or heard of in any State of the Union.

Coming back now to the returns of this year's election, Roosevelt runs ahead of the Republican candidate for Governor everywhere—by 150,000 votes (counting both ways) in Massachusetts, 16,000 in Rhode Island, 100,000 in New York, 50,000 in Michigan, more than 100,000 in Minnesota, 40,000 in Missouri, 20,000 in Colorado; also in Michigan and in Washington, but the exact figures in these States are not yet at hand. Bribed voters do not scratch; they put straight tickets into the box. It could not be bribery of any sort which led to these wide preferences within the party for the Electoral over the State ticket.

Again, if the campaign committee had been furnished with millions for buying voters, directly or indirectly, why would it put its money into States like Maryland and Missouri, which were not needed; or like Iowa, Minnesota, Ohio, Pennsylvania, which would have chosen Republican electors without the outlay of a single dollar? There is no doubt that the colossal majorities, which in every State that was carried ran far beyond those for McKinley in 1900, were as much of a surprise to every man on the Republican campaign committee as they were to the country at large.

The voters may have been mistaken in

their approval of Mr. Roosevelt's policy, but they certainly were not bought, and it is very unfortunate that such a proposition was ever injected into the campaign which has just come to an end.

Respectfully, L. N. D.

LOUISVILLE, KY., November 10, 1904.

TO THE EDITOR OF THE NATION:

SIR: While in sympathy with President Roosevelt's indignation at Judge Parker's charge concerning the funds of the Republican National Campaign Committee, we must bear in mind that the Judge was doing what he could to discredit the Republican Committee, while the President, although in part defending himself against accusations, was doing what he could to discredit the Democratic Committee. Neither was making a judicial inquiry nor acting in a judicial frame of mind.

It is not a question whether any pledge or promise or understanding has been entered into as to future benefits to be conferred in consequence of contributions from "Trusts, corporations, associations, combinations, partnerships," etc. The real question is, Why do these business concerns make these contributions, why do they make them sometimes to the committees of both parties, and why do they keep them secret?

Of course, such contributions are not purely gratuitous. People do not engage in business and make contributions to political committees "for their health." They are engaged in business to make money, and they pay money to political committees because they expect to get back more than they pay out. They expect to do this through legislation that will favor their particular business interests. There is no need of any understanding, implicit or explicit. The thing takes care of itself, for the successful political party, whichever it may be, knows that these contributions will cease unless the parties making them get what they want, at least approximately.

All payments thus made for the purpose of procuring the election of men who will secure legislation that will favor such business interests, are wrong and should be stopped. The first step towards stopping them is *publicity*.

The sources of supply of both our great political parties are now carefully kept secret, and this is in itself evidence that both those making the contributions and those receiving them are doing wrong, and know they are doing wrong. Of course there are legitimate campaign expenses, such as printing, postage, hall and office rents, clerks, stenographers, typewriters, stationery, telegraphing, translating, travelling expenses, expenses of speakers, etc., etc., but there is no reason for keeping them secret. There are also legitimate contributions, and there is likewise no reason for keeping them secret. It may be accepted as a general rule that all receipts and all expenditures of political committees that are kept secret, are illegitimate and should be prohibited by law. The remedy lies in legislation requiring all committees of political parties to make sworn statements showing their receipts and disbursements in detail, and they should be required to be verified by competent auditors of recognized ability and high character of the opposite party.

That this suggestion is not utopian is proved by the fact that one political campaign committee has done these things, and this without any law compelling them. At the end of the campaign of 1884, the National Committee of Republicans and Independents published their treasurer's report, showing their receipts and their expenditures, which report was certified to be correct and true, after examination of the subscription-list, account-books, and vouchers by competent auditors; and the subscription-list was kept open to all subscribers. No national campaign committee, either Democratic or Republican, has ever followed this example, and it is safe to say none will follow it until compelled by law. Too many secrets would come to light that have no right to be secrets. The very fact that no campaign committee challenges its opponent to do this, first publishing its own treasurer's report, is convincing evidence that both are engaged in doing what is wrong to do, and therefore does not want to have known.

This issue was not met by either President Roosevelt or Judge Parker.

Yours truly, A. M. E.

PROVIDENCE, R. I., November 11, 1904.

ONE ELEMENT IN THE MASSACHUSETTS VOTE.

TO THE EDITOR OF THE NATION:

SIR: One of the contributing causes to the election of the Democratic candidate for Governor of Massachusetts has not been sufficiently emphasized. Mr. Douglas received the support not only of many Independents who supported Mr. Roosevelt, but also of straight-out Republicans who took this means of showing their disgust for Senator Lodge and the Republican machine. The Republicans are growing more and more restive under his boss-ship, and if it had been possible to vote directly for or against him last Tuesday, he would have been repudiated by a larger majority than that which buried Gov. Bates. Massachusetts did indeed repudiate Lodge's anti-reciprocity policy; and Lodge, like the coon, promptly came down. We may henceforth expect him to pose as the "original" champion of reciprocity.

That he and his machine understand the meaning of Tuesday's vote is evident from the fact that there is already talk of shelving Lieut.-Gov. Guild (whom the machine had slated for Governor after Bates's third term), and of putting forward ex-Gov. John D. Long, who, but for the intrigues of Lodge, would long ago have represented Massachusetts in the United States Senate. Lodge sent Mr. Long to the rear and had himself elected Senator; that in his present plight he should even hint of appealing to Mr. Long to redeem Massachusetts—and, incidentally, to repair Lodge's machine—shows how quickly our Republican boss has learned the lesson of the election.

SPECTATOR.

BOSTON, November 13, 1904.

CANDIDATE AND VOTER.

TO THE EDITOR OF THE NATION:

SIR: What Prof. H. Morse Stephens, discussing the French Constitution of 1791, rather aptly calls the "mania for election" is beautifully illustrated in a certain county containing a large city not a thousand miles from the head of Lake Michigan. In order that the citizens of this beloved county may be allowed to enjoy the manifold blessings of life, liberty, and the pursuit of happiness, they are called upon this November to fill some one hundred and six offices, legislative, executive, and judicial. The population of the county is about two million souls. There are seven tickets in the field, which should give the voters a choice of some seven hundred candidates. These are the facts; let us now consider the theory.

Theoretically, these seven hundred candidates are the best qualified persons for the various positions in the Government. Practically, we know that these seven hundred (or whatever the correct number may be) are most of them men who have succeeded by hook or crook, rather than by special fitness, in getting themselves nominated. Theoretically, these nominees are the spontaneous choice of the people. Theoretically, too, the voters know personally all the available candidates for each office, except perhaps local representatives; and, theoretically, the voters have selected from the fulness of such knowledge of the mental and moral qualifications the men best suited to govern the county and city. Practically, the average voter knows not one-tenth of the candidates he is called upon to decide between. Practically, the average voter, even if he were personally acquainted with the seven hundred nominees, is absolutely unfit to pass judgment on the candidates' qualifications for the office in question.

It is one of the commonplaces of human experience that, in order to select a fit man for a given position, the person who selects must know thoroughly both the duties and responsibilities of the office and the personal qualifications of the person applying for the position. No mercantile or manufacturing business could possibly be successfully conducted on any other basis. Yet it is inconceivable that any sane man, however much he may admire representative institutions, would for a moment maintain that the average voter has such knowledge of the duties of auditor of public accounts, recorder of deeds, clerk of the various courts, or county surveyor. It is conceivable that a small fraction of the voters may have become acquainted, by sight at least, with the various nominees for the Superior Court, but it is hardly probable that such persons have sufficient knowledge of law to decide as to the mental and moral equipment of such nominees, while the mass of voters know absolutely nothing about the office or the candidates.

As an example of our "mania for election," the student of political science is invited to chew the cud of reflection while studying the selection of a county surveyor by an electorate, the vast majority of whom could not at sight tell a theodolite from a cream separator. Of the seven candidates for this position, two occupy "clerical" positions in "mercantile establishments," and one is a negro teamster. Among other curiosities are the nominations of a machinist and a janitor for recorder of deeds; a machinist and a capmaker for Circuit Court clerk; a cigarmaker for the Superior Court clerk; a newspaper peddler for coroner; a knife-grinder for the Board of Review; a cigarmaker, a collector of a butcher, and "a student who has read law" for Superior Court

judge. "A sailor who has travelled in many parts of the world" is a nominee for president of the County Board, while tinsmiths, house painters, bricklayers, and plain laborers are other nominees for county commissioners. These nominees, it should be observed, are not poor boys starting life under adverse conditions, like Lincoln for instance, but are mostly mature men who have presumably now reached the station of life for which their natural ability fits them. Without impeaching their personal honesty, it is patent to most judges of human nature that they are no more suited to the offices they aspire to than they would be as captain of a war vessel, director of an astronomical observatory, or principal of a young ladies' seminary.

The present mania for election is undoubtedly a heritage from not very remote frontier conditions, when each man knew his neighbor, when life was simpler, and when there was no submerged tenth of city population. The significant feature of the present situation is the total lack of serious understanding on the part of a minority of the electors regarding the duties and responsibilities of public office and the necessity of special aptitude in candidates. Somebody has evidently been putting too literal an interpretation on the glittering generalities of the Declaration of Independence.

E. L. C. M.

HENRY GEORGE NO SOCIALIST.

To the Editor of The Nation:

Sir: Your Sydney correspondent, in your issue of November 10, does an injustice in saying: "Edward Bellamy, Laurence Gronlund, and Henry George purveyed the Socialist policy which New Zealand and the Australian States are carrying out."

What this policy is, your correspondent makes plain, and I admit that it is Socialistic; but no part of it has ever been taught by Henry George. I have heard him speak and have read his books. He condemns the very things your correspondent mentions as the policy of the Labor party in Australia. It would have been repugnant to him to have the Government purchase land, operate mines, and control tobacco factories. He would have the Government keep its hands off from private industry. He was such a radical free-trader that he advocated the abolition of custom-houses. His theories are opposed to arbitration laws, factory-inspection laws, and Government regulation of wages. He wanted all taxes to fall upon land values, because he believed that such values belong to all the people. He could see no way out of our troubles with the railroad corporations other than to have the Government own and operate the roads. There are many of his disciples who believe that it would be sufficient for the Government to own the tracks and highways and permit competition in carrying goods and passengers over them.

That is the extent of Henry George's Socialism. He was a great stickler for the rights of property, after a true ethical line had been drawn between mine and thine. His "single tax" rests upon what he considered a true theory of private and public property. He should be classed as an individualist rather than as a Socialist, for he believed that his plan of taxation would give a freer field for individual liberty and initiative than we now enjoy.

H. M. Holmes.

Detroit, November 11, 1904.

THE PLEASURE OF POETRY.

To the Editor of The Nation:

Sir: An article on "The Primary Function of Poetry," printed in the *Nation* for November 3, presents a view so attractive that one is vexed to find one's self unable to unite assent with sympathy. I have often been plagued by the use of the word "pleasure" in the place in which Mr. French so warmly reprobates its presence; I can feel no joy in defining the end of poetry by a term which might be used with equal fitness to designate the end of bonbons, dominoes, and parlor magic. A term which two people out of three are sure to misconceive is infelicitous even when it is exact, and poetry may suffer, in the minds of those whose sympathy is valuable, from the unmerited odium annexed to this unlucky substantive.

The term itself, if rightly grasped, is innocent enough. When we reflect that every instinct, high or low, can both enjoy and suffer, it is plain that the range of pleasure and the range of feeling are conterminous, and that poetry is free to minister pleasure to our instincts of worship, aspiration, heroism, and self-forgetfulness. The highest in us can be pleased as well as the lowest, and the arts which subserve pleasure as they run down to meet the grossness of human nature at one end, run up to meet its sanctities at the other.

It is alleged that it is the function of poetry to reveal, to teach, to exalt. But this cannot constitute the whole definition of the function of poetry; in that case, sermons and homilies, if sincere, would be poetical. Nor can it even constitute a factor in the definition; in that case the "Ode to Psyche," which is voluptuous, would have far less claim to the title of poem than the "Ode on a Grecian Urn," which is thoughtful and didactic. Yet who can hesitate over the "Ode to Psyche"? Who can hesitate over the Sapphic and Anacreontic lyrics, the odes of Horace, the songs of the Elizabethans, the work of Herrick and Carew, and countless other poems which would find it no easy task to demonstrate their edifying quality?

The source of the confusion seems to lie in the effort to make the distinction between the higher and lower forms of poetry identical with the distinction between poetry and other things. Let us grant, for the sake of argument at least, that the highest poetry lifts and teaches—nay even that it aims to lift and teach (see Matthew Arnold in relation to truth and seriousness as the groundwork of the *best* poetry—'Essays in Criticism'; vol. ii.; 'The Study of Poetry,' pp. 21, 22); still, even here we have a differentia, not of poetry itself, but only of the highest poetry. It is obvious that a definition which must be common to all the individuals of a class, cannot be based on the peculiarities of its better specimens. Love, insight, magnanimity are the weighty and the priceless things in human nature, the things which make it worth one's while to be a man; yet neither magnanimity, insight, nor love can find a place in the definition of humanity. We cannot turn our diameter into a circumference; we cannot circumscribe a genus by a line which merely separates its parts. All poems please, and the greatest edify; but for purposes of definition the superior characteristic must give way to the universal.

When we assert that the end of poetry is pleasure, we concede that the poet may have other ends. These ends may be higher than pleasure, may be dearer to the poet himself; but they do not stamp the work as poetry. A man may write a history or an essay with more zeal to amuse than to instruct his audience; but, nevertheless, it is his wish to instruct that entitles him to the name of an essayist or historian. Half, and the best half, of the world's humorists from Aristophanes down to Mr. Dooley have sought to instruct and reform mankind by ridicule; yet all this does not gainsay the plain fact that the end of humor as such is to excite laughter, and that the addition of other and better ends may raise its rank, but cannot fix its nature. The means to one end is liable to become at any moment the instrument of some other and higher purpose, but this has no effect on definitions. I present an opera-glass to a friend as a proof of my affection, but the function of an opera-glass is not benevolence, but observation.

May we not, then, affirm that the end and mark of all poetry is pleasure, but that the highest and most lasting poetry is distinguished by the inclusion of other functions—functions which have nothing to do with its poetical essence, but which have everything to do with its poetical supremacy? Even here we must bear in mind that delight and welfare approximate as they ascend—that the best poetry circulates in an air in which pleasure is benefit no less assuredly than benefit is pleasure. End and means coalesce, and prophet and poet are blended in the common *vates*.

O. W. Firkins.

Minneapolis, Minn., November 8, 1904.

GADDESDEN'S TREATMENT OF SMALLPOX.

To the Editor of The Nation:

Sir: The late Prof. Niels R. Finsen of Copenhagen, in an article on "The Influence of Light on the Skin," published in a medical journal in 1893, asserted that smallpox could be cured by putting red curtains at the windows of the sick-room; and this method of treatment was successfully used in the following year during the epidemic in Copenhagen. It is interesting to recall the fact that this method, like many others, was not an absolutely new thing, but was rather a re-discovery. John of Gaddesden, the illustrious fourteenth-century physician, who probably furnished the original of Chaucer's Physician, treated a son of Edward I., doubtless Thomas of Brotherton, Earl of Norfolk and Marshal of England, for smallpox, by wrapping him in scarlet cloth and putting him in a bed and room with scarlet hangings. The result was entirely satisfactory: in Gaddesden's own words, "Est bona cura et curavi eum in sequenti sine vestigio variolarum" (*Rosa Medicinæ*, ed. Venice, 1516, p. 41a). That Gaddesden could give a rational explanation of the phenomenon may be doubted; yet let us not dogmatize too far.

Dr. Norman Moore gives further interesting details of Gaddesden in the Dictionary of National Biography; see also Prof. E. E. Morris's interesting contribution to the Furnivall volume, 'An English Miscellany.' That this does not diminish the glory which rightly belongs to Finsen will be evident to any layman who reads Dr. Foster's article on smallpox in the latest edition of the 'Reference Handbook of the Medical Sciences,' vol. vii. (1904), in which no direct mention of Finsen's work or theory is made.—Yours truly,

CLARK S. NORTHUP.

CORNELL UNIVERSITY, ITHACA, N. Y.,
November 8, 1904.

Notes.

Methuen & Co., London, publish directly 'The Monk of Llanthony [Father Ignatius],' by the Baroness de Bertouch; 'Anecdotes of Soldiers,' by J. H. Settle; and 'Palio and Ponte: A Book of Tuscan Games,' by Dr. W. Heywood, with many illustrations.

A new and magnificent edition of the German classics is to be published by the Inselverlag of Weimar, and to be called the "Wilhelm-Ernst Ausgabe," in honor of the young Duke of Saxe-Weimar. A wealthy lover of art has set aside the sum of 10,000 marks for the publication of each volume, with the proviso that a certain portion of the income shall be devoted to the needs of the new Museum in Weimar. The beginning is to be made with Goethe and Schiller, and then to be followed by Kleist, Grillparzer, Hebbel, and others.

Dr. Edward Everett Hale's 'Memories of a Hundred Years' (Macmillan) has been reissued in a single volume, with three additional chapters, the first entitled "Eighty Years," so that the professed centennial period of reminiscence is better justified by two years. This chapter goes back to childish recollections and early days in the ministry, and contains as suggestive a sentiment as any to be found in the entire work (p. 317). "Speaking to a large audience of young men the other day, I told them that I wished some of them would undertake the serious study of the moral and spiritual effect which what are called mechanical or physical inventions have produced upon the world in the last hundred years. . . . Religion is on a higher plane because of physical invention and discovery." Another chapter relates the history of magazines with which the Everetts and Hales were connected. The last is a diffuse but not worthless comparison of the modes of public conveyance sixty years ago and to-day, as revealed by Dr. Hale's diary. It is a striking picture, not only of the consolidation of capital and industry, but of the enormous gain to the general welfare consequent upon the substitution of continuous for constantly interrupted travel, and (in accordance with the principle just cited) to the moral and spiritual elevation of the community.

General Grant is hardly more than an excuse for the inflated guide-book entitled 'Along the Nile with General Grant,' by Elbert E. Farman, LL.D., formerly United States Consul-General at Cairo (New York: The Grafton Press). Nearly all the references to him in the index are stations of the Nile journey. The most characteristic trait exhibited—that of taking all of a good thing that was offered him—appears in his decision to accept the Khedive's hospitality, "a palace, special trains on the railroad, and a steamer in which to make the voyage up the Nile." He first asked advice of the Consul-General, who reported the general opinion of the American colony in Cairo to be that he should accept, but that "Admiral Steadman, who was then on a visit to Egypt," thought otherwise. The sum of the ex-President's conversations as reported by Judge Farman is of the slightest value, except the revelation on page 270 of Grant's alternate plans against Lee on assuming command of the Army of the Potomac; and even this is fragmentary. There are numerous half-tone illustrations.

Another unconventional guide-book is 'Three Weeks in Europe: The Vacation of a Busy Man,' by John V. Higinbotham (Chicago: Herbert S. Stone & Co.). Its everyday experiences are what one might expect, related without literary skill, but doubtless profitable to somebody. The views are unhackneyed.

From Messrs. G. P. Putnam's Sons we receive a new volume in the "Our European Neighbors" series, viz., 'Swedish Life in Town and Country,' by O. G. von Heidenstam. A rapid geographical and historical sketch is followed by chapters on government, the capital, Stockholm, education, literature, art, industrial life, etc., treated in a competent way within the narrow limits of less than 300 pages. A chapter on "Beneficent Foundations" is given over, almost wholly, to an account of the late Alfred Nobel's foundation of annual prizes "for the reward of scientific discovery, of literary merit, and humanitarian endeavor." For the benefit of English readers, some of the space might perhaps have been better devoted to other matters of interest. By a slip, the country is made to extend over six and a half degrees of latitude, instead of thirteen and a half (about 55.20 to 69 N. latitude), and Venern (Wener) is said to be the largest lake in Europe. Lakes Ladoga and Onega in Russia are both larger, Venern coming third. We have noted a few other inaccuracies which, however, detract but little from the value of a work designed to acquaint the reader having little time to spare with a small nation which once played a considerable part in the history of Europe.

'The Garden of Asia: Impressions from Japan,' by Reginald J. Farrer (London. Methuen & Co.), is a guide-book in "colored words," as the author tells us frankly in his preface. During an eight months' stay, he gave himself to the attempt "to translate into hopelessly inadequate words some aspects of the extraordinary charm which Japan offers to the observant." His foil is "the three weeks' sojourner in Yokohama," and his audience in vision is a very English public. In the main, accurate as to his facts, historical, geographical, and sociological, though with some curious slips, he gives us a feast of rhetoric, but adds little to our knowledge of people or country. He visited most of the show places, and his repetitious exuberance of description takes the place of insight. He saw only the *geisha* and the *oiran*, but nothing of Japan's womanhood, yet he discusses forcibly and clearly "The Sphinx in Japan," largely from his knowledge of Mitford and Chamberlain. His sympathetic appreciation of the native religions shows that he can press beyond the symbol to the reality. He had a run into the Korea of seaports and capital, coming back to the Land of Beauty and Mystery with keener susceptibilities.

In reprinting in separate form as a book of some 550 pages his 'Life of William Shakspere' (Boston: Dana Estes & Co.), originally written to accompany the New Century edition of Shakspere's Works, Dr. William J. Rolfe has been well advised, for he thus makes more accessible a work of considerable merit, which may stand as a monument in an honorable career of labor devoted largely to Shaksperian studies. Dr. Rolfe's biography of the great dramatist impresses us as older-fashioned in many ways than the recent ones by Sidney Lee and George Brandes, less inclined to new conjecture and hypothesis-framing, but perhaps none the less meritorious on that account. We wish that of the eight pictorial illustrations the two which are mere fancy sketches had been omitted.

To a different class, namely, that of books of "Illustrations" of Shakspere, like that of Hunter, belongs 'William Shakespeare: His Family and Friends,' by the late C. I. Elton (E. P. Dutton & Co.). This is a work of miscellaneous, minute, and curious Shaksperian learning by an accomplished but retiring and unambitious English gentleman, scholar, lawyer, member of Parliament, antiquary, and bibliographer. The manuscript was not completed, and conveys the impression of full notes rather than a finished book; but the material collected was worth preserving. Considerable portions are but repetition of often-stated facts, but there is some new material, and tradition and evidence are sifted with lawyer-like sagacity. The facts bearing upon Shakspere's family and property relations are especially well grasped and analyzed. Other things treated by way of illustrations are Howell's Letters, Ward's Diary, and (*da capo*) the whole question of the date and circumstances of the production of "The Tempest." In both substance and style it is a rich and thoroughly attractive volume.

The scholar who has long labored in the paths of soberness and method cannot but feel drawn now and then to ease his mind in the lighter ways of popularization and the essay style. Professor Schelling has won a name for himself as a serious student of Elizabethan literature. 'The Queen's Progress, and Other Elizabethan Sketches' (Houghton, Mifflin & Co.) is an attempt to present in brief, readable, and unemphatic essays the twice-matured fruits of some of the writer's favorite studies. There are papers, neatly turned, on such subjects as the child-actors of the great age of our drama, on the Elizabethan song-lyric, and a half-dozen like themes. We must query the phrasing of at least one passage: "Edmund Spenser, the gentlest of poets and of men, *helped put to the sword*, save for a few officers, a band of surrendered Spanish invaders, at Smerwick in Ireland." It is a pretty book, and the publishers have given it a pleasing format, with paper, type, and a half-dozen excellent illustrations to match.

'The Courtesies,' by Eleanor B. Clapp, in "The Woman's Home Library" of Messrs. Barnes & Co., is a practical and on the whole trustworthy guide, designed for those who, not being to the manner born,

might commit the blunder, less pardonable than crime, of beginning with the wrong fork at a dinner or using ruled notepaper, or addressing a letter "Mr. and Mrs. Brown and Family." The etiquette of visiting-cards, of serving afternoon tea, of balls and calls and weddings, is here given in detail. The "divorced woman's visiting card" *(O mores!)* has a section all to itself. Miss Clapp is on the whole a guide who may be followed blindly by the unsophisticated. We have noted, however, at least one serious mistake. It is not true that in English society the newcomer "calls first on the residents of the place" (p. 25). If the path of the parvenu were thus made easy, what English county family would be safe? On page 51 Miss Clapp gives what she considers the correct form for that bugbear of the illiterate, a letter in the third person. Her model composition runs smoothly as far as the second sentence, and then comes the familiar lapse: "Enclosed find check for the amount." This is fortunately directed to a member of society to whom the check will seem more essential than good grammar.

Another volume of the same series, 'House and Home,' by Mary Elizabeth Carter, is addressed to that great class which in England would rank as "middle," and in France as the *bourgeoisie*. It deals with the routine of the home from the moment when you choose it or build it, to the moment when it burns down; and here we may observe that this very sensible writer, who has grasped the great truth that the home centres in the plumbing, the cellar, and the heating apparatus, wholly ignores the possibility of fire, and the precautions that should be taken by every careful householder. For the rest, we can only say that a household that should be run on the lines laid down in Miss Carter's little book would realize even the ideal of the Chicago millionaire who dreamed of home life without friction, and decided that to eliminate this would be worth, to him at any rate, a million dollars.

The publishing house of Clifford & Lawton, at No. 19 Union Square in this city, sends us a small portfolio "containing fifty-five views of the best contemporary American interiors, correctly classified by periods." One sheet at once bears the title, 'American Interior Decoration,' and the list of illustrations; and on the back a brief publisher's note, giving credit to the furniture dealers, decorators, and business houses which deal in matter of decoration, for somewhat less than half of the fifty-five pictures. The reader who will imagine a collection made up from the newly opened Hotel St. Regis and the only less renowned Hotel Astor, three or four stage settings, half a score of exhibits at St. Louis, several saloons made up in the shops of prominent furniture dealers, and "a Minneapolis decorator's version of Japanese," will be able to form a fair notion of the sort of book that we have here. Obviously, no one of the designs can be of any considerable artistic interest. Of course, in every such collection, there are hints of costly and carefully made-up interiors; and sometimes, as if by accident, a really interesting effect may be produced, as where, in the New York Building at St. Louis, a double colonnade of very florid design divides a large hall in a really effective fashion.

Longmans, Green & Co. publish 'An Attempt towards a Chemical Conception of the Ether,' by D. Mendeléeff, translated from the Russian by George Kamensky. There is nothing new in the idea that the ether may be a chemical body. Mendeléeff's turn of mind would naturally lead him to favor this view; but it cannot be denied that a review of the history of scientific hypotheses will show that it has been conceptions of this character—the realistic character—in favor of which experiment has usually decided. It is an interesting fact, too, that a man of Mendeléeff's surpassing sagacity should be so decided as he appears to be that, if the ether is a chemical body, it is an unmixed element of the helium-argon group. It has long been as good as known that coronium, whose spectrum was so magnificent in the eclipse of August 7, 1869, is a chemical element, considerably lighter than hydrogen. Mendeléeff says its atomic weight "will be not greater than 0.4, and probably less." This would make its density one-fifth that of hydrogen or one-seventieth of the air's. He makes it similar to neon, which, with little reason, he separates slightly from helium, argon, krypton, and xenon—that is, he separates it as much as sodium is separated from lithium, potassium, rubidium, and cæsium.

J. Clark Murray's 'Introduction to Psychology' (Boston: Little, Brown & Co.) is simply our old favorite, the same author's well-known and approved 'Handbook,' in a new dress. The author thinks that so many parts have been so completely rewritten that "it would have been misleading to describe it as a new edition of the old work." Many will hold quite the reverse opinion. We do not remark much retraction, and the enlargements amount, we should judge, to some 6 per cent. of the contents; certainly not to the double of that. The changes appear to be everywhere judicious, and in half a dozen cases, at most, important; but the original dress of the book was far more graceful and more likely to prove engaging to young persons. The new 'Introduction' is, however, welcome.

Prof. Florian Cajori's 'Introduction to the Modern Theory of Equations' (Macmillan) demands mention as the only small treatise in the language embracing the whole subject and showing how best to treat higher algebraic equations. The account of the Galvis theory is avowedly taken from Weber's algebra, but is for the first time brought within the comprehension of every student of middling capacity, by numerous examples. If the student goes through these and makes sure of perfectly familiarizing himself with every aspect of one point before going on to the next, and not fatiguing himself, we see no reason for his finding this doctrine, so useful as it often is, and so sure of enlarging the mind, at all beyond his grasp. We regret that the limits of the roots have not been more liberally treated.

The geographical section connected with the French African army has published a large chart in seventeen sheets covering the larger portion of French Africa. But as this is still defective, giving only the itineraries, it has been decided to prepare a large chart on the scale of 1:500,000, to consist of at least sixty parts. Special investigations are now being made for this purpose in the lower Senegal districts, in the peninsula of Cape Verde, Dakar, and elsewhere. It will take many years to complete the work. The next region to be undertaken is the neighborhood of Saint Louis, and an expedition is being prepared for the Ivory Coast.

Liberia is in an extremely primitive condition, judging from the account by our minister, Mr. Ernest Lyon, of a recent journey into the interior published in the Consular Reports. There are no roads, and the means of communication between the villages "in the dense forests or upon the tops of steep hills" are paths made crooked and labyrinthine to render access difficult. This is due mainly to the ceaseless tribal wars which are devastating the State—wars of which "women are invariably the cause." The land has great natural resources. The forests abound in rich and valuable timber. Mineral wealth is abundant. Cotton is indigenous, and the soil is peculiarly adapted to the growth of coffee. But these sources of prosperity and wealth are largely undeveloped, and in some instances, like that of coffee culture, the amount and value of the crop are diminishing. The whole foreign trade in 1902 was only about half a million dollars ($535,974), or one hundred thousand less than in 1899 ($646,646). It is a significant fact, mentioned in another report, which in some measure accounts for the lamentable decadence, that "almost every Liberian [meaning an American negro or his descendant] is a Government official."

—Little, Brown & Co., Boston, publish a new (fourth) edition of John Norton Pomeroy's 'Code Remedies,' by Prof. Thomas A. Bogle. The editor has added a multitude of cases (some ten thousand citations are given), and to obtain room has done much in the way of omission and condensation. Nearly a third of the book is new. Mr. Pomeroy was one of the last of the legal writers of what may be called the old American school—men whose aim was nothing more spectacular or novel than the plain exposition of the law as they found it. The system of code remedies was fortunate, in the days when the Code itself was still a novelty, in finding in him an expounder of the first order of ability, unprejudiced and lucid in a most difficult and technical field. On the first appearance of the book thirty years ago it was found to explain the newly introduced system so clearly and forcibly (Mr. Pomeroy's style was admirably adapted to his work) that it was at once welcomed by the bench and the profession, and accepted as an authoritative treatise, and it has held its own. Professor Bogle's conscientious and thorough revision probably guarantees it a prolonged life. He is, we believe, an acknowledged authority on the reformed Procedure, and his hand is to be seen on almost every page. Such a revision, if successful, redounds almost equally to the credit of author and editor.

—Another law-book, published by the same house, which deserves more than ordinary notice, is a work in one volume by Alfred G. Reeves on 'Real Property.' The author calls it a "treatise on special subjects of the law of Real Property," but this is too modest a title, for it contains an outline of all real-property law; together with more detailed treatment of those special subjects, such as fixtures, easements, tenures, uses, trusts, powers, mortgages and perpetuities, which occasion most controversy and litigation. Unless we are mistaken, the student and practitioner will find here in a single volume what it is dif-

ficult to get elsewhere in any number of volumes—a rationale of real-property law, with enough of history to make its development intelligible, combined with an exposition of its application to every-day questions of the knottiest kind. This often involves conflicting theories, and we have been struck in looking, for instance, at what the author says about mortgages, to see how clearly he manages to bring us through the confusion of the cases. Real-property law has at its base a rounded, logical system, but it is at the same time a branch of law developed historically, and much changed in the process of evolution. What is needed for its comprehension is just such treatment as Mr. Reeves's, but few writers have the skill, the time or patience for it. We can well believe that the treatise, which is sure to make its mark, is the result of years devoted to the instruction of classes in the subject.

—Philosophers as a body have always shown a strange indifference or covert hostility towards questions concerning the future life, and accordingly have contributed little to our reflections, and nothing to our knowledge, on the subject. With the glorious exception of Plato, few indeed among them could, at least until quite recently, lay claim to any serious interest or considerable achievement in this direction. It is therefore the more noteworthy that the richly endowed and versatile nature of Fechner made him one of the very few thinkers of the first rank who have found time for thought on such topics, and the translation of his 'Little Book of Life after Death' (Boston: Little, Brown & Co.) should undoubtedly be welcomed. Written so long ago as 1835, under the pseudonym of "Dr. Mises," by which Fechner emancipated his more humanly interesting writings from the restrictions of academic etiquette, it has now been agreeably translated by Mary C. Wadsworth. Prof. William James has helped the reader with ten charming pages of introduction to a kindred soul, calling Fechner "a Herbert Spencer, no less encyclopædic, and more subtle, . . . who mingled humor and lightness with his heavier ratiocinations." In point of content, nevertheless, it is hard to see how Fechner's notion of the future life rises beyond that of an "immortality of influence," save in respect of the poetic eloquence and prettily mythological form in which he enfolds it. The reader frequently encounters richly suggestive phrases, but in the end he has to ask himself whether he (as perhaps Fechner before him) has not fallen a victim to the seductions of a metaphor. It is, finally, worth recording that, later in life, Fechner, either because he was himself dissatisfied with his earlier line of reasoning, or because his "panpsychist" conception of the universe was elastic enough to admit the evidence, interested himself with Zöllner in spiritistic phenomena, and braved more than the usual measure of obloquy by testifying to what he saw or thought he saw.

—Dr. Carl Peters, the African explorer, has just published in 'England und die Engländer' (Lemcke & Buechner), the results of observations made during a ten years' residence in England. What he has to say is interesting and entertaining, and to his countrymen should be instructive. He makes frequent comparisons between Germany and England, not always favorable to the former. While he agrees that in the matter of army organization and of education the English are far behind the Germans, he considers that in many other fields Germany has much to learn from England. A good deal of statistical information of recent date he intersperses with many details concerning the daily life and the social customs of various classes of English society, referring always to corresponding conditions in his own country. In the main, his views show him to be a man of unusual intelligence and experience; but his career as a German colonizing pioneer apparently gives him a strong bias in favor of British imperialism, and leads him to express the opinion that Mr. Chamberlain's policy is bound to prevail as the only means of maintaining the supremacy of England. His forecast of the future seems to be a customs union of England and her colonies, with which he even believes the United States would be willing to join, and in opposition to which Continental Europe will be compelled to organize a central Zollverein of its own.

WADDINGTON'S SEVEN YEARS' WAR.

La Guerre de Sept Ans: Histoire Diplomatique et Militaire. Tomes II., III. Par Richard Waddington. Paris: Firmin-Didot & Cie. 1904.

With the publication of these two volumes M. Waddington carries his history of the Seven Years' War past its central point. The opening section of his work found its last great incident in the battle of Leuthen. Resuming his narrative with the retreat of the French from Hanover during the early part of 1758, he reaches at the close of his third volume the spring of 1760—that is to say, the moment when the first serious attempts to stop the war ended in failure. Within the limits of this period lie such celebrated battles as Crefeld, Zorndorf, Hochkirch, Minden, and Kunersdorf, besides the operations at Louisbourg and Quebec, the attempts of Lally to regain lost ground in India, and Hawke's defeat of Conflans. M. Waddington's aim is to depict this intricate and widespread contest in the light of its diplomacy. The whole action radiates from courts—unless the British House of Commons be called a distinct factor; and without following the flux of policies which depended upon court intrigue, the course of hostilities can be but imperfectly understood. Of course, the result of the last campaign was always a vital fact in the situation, but the progress of international negotiations furnishes the only safe clue through a labyrinth where five great Powers and several small ones are enmeshed, the issues being the maintenance or loss of French prestige, the defeat of Hohenzollern or Hapsburg, and the fate of two colonial empires. Diplomacy as affected by war, but still diplomacy, is M. Waddington's main subject, and the most valuable portion of his task has been done in European archives. We should, however, state that his study of the war itself has taken him to the battlefields of Germany, to the scenes of the chief naval engagements, to the valley of the St. Lawrence, and to the plains of India.

Considered from another standpoint, the main element in this book is furnished by the politics of France, while the leading personality is that of Frederick. It could hardly be otherwise, since Frederick has no rival among generals in the field, and M. Waddington, despite his ideal of impartiality, is bound to find his highest interest in the fortunes of his own country. If we were to offer a general criticism regarding the relative degree of prominence which is accorded each of the different Powers, we should say that the domestic politics of England might to advantage be given more attention than they receive. In view of the consequences, Pitt's difficulties with his opponents and colleagues assume an importance which is not altogether dwarfed by the relations of Madame de Pompadour to Bernis and Choiseul. On the other hand, the part of Austria, both military and diplomatic, receives its full due. For example, there are few more telling passages in the whole book than the account of the feeling which prevailed at Vienna on the close of hostilities in 1758, when the Austrians had been left victors in name, but vanquished in fact. The acknowledgment of Daun's virtues, the still keener recognition of his defects, and the absolute impossibility of discovering any one who could be dreamt of as a substitute—all these states of mind are graphically described. M. Waddington has hit upon few more entertaining sources of information than the correspondence of Montazet.

The course of French policy during 1758-1759 underwent no profound modification, but in point of detail it offers the historian several interesting features. Chief among these are the steadfastness of Louis XV. to his treaty undertakings, the fall of Bernis, and the stand taken by Choiseul at the time of the first proposals of peace. The King, though easygoing, was vain and petulant. He entered the war without any proper apprehension of what his promise to the Empress might cost France in blood and treasure. Yet, once engaged, he feared nothing so much as a representation from Austria that he was failing to contribute his share towards the common cause. The position of Bernis was far different. On the one hand, he owed everything to Madame de Pompadour, and was committed to the war by his part in bringing Austria and France together; on the other, he came to appreciate clearly the extent of the sacrifices which his country must make in a struggle not her own, and of which any possible advantages would not be reaped by the Court of Versailles. Thus placed under a cross-fire between his dependence on Court favor and the promptings of his better judgment, the French Cardinal succeeded no better than Cardinal Wolsey had done under similar circumstances. But there is this difference between the two cases, that Wolsey recognized the weakness of his position, while Bernis thought himself competent to direct an independent policy and outmanœuvre, if not actually flout, the Pompadour. According to the general opinion of Europe, he was sacrificed to the rancor of the war party at Versailles. M. Waddington, however, is unwilling to let this benevolent judgment become accepted without some modification. Bernis deserved his fall for the part which he had taken in cementing the bond between Austria and France, even though at a later stage he

would have saved his country from the abyss. In itself his disgrace was justified; one finds its sole flaw in the fact that it was inflicted by his accomplices.

As for Choiseul, M. Waddington acquits him of special guilt in the matter of the Cardinal's downfall. He owed much to Bernis, and had frequently expressed his sense of devotion in the strongest terms; but since he had no real means of averting disaster, he accepted the inevitable. His own policy as Minister was to extricate France from her chief dilemma by distinguishing between the two wars and effecting a separate peace with England. But in working towards this end he had, besides the opposition of Maria Theresa, to contend with the colonial ambition of Pitt and the suspicions of Frederick. For his address during the peace negotiations of 1760, M. Waddington has the warmest praise. He showed remarkable tact in his dealings with the Empress, and made proposals to the enemy in good faith. Finally, when all his overtures had been rejected, he took up the war once more, with energy and the determination to force a peace if France could secure any success in the forthcoming campaign.

In his first volume M. Waddington displayed Frederick triumphing among the glories of Rossbach and Leuthen. It now becomes his duty to describe the catastrophe of Kunersdorf and the King's suicidal despair:

"Our loss," wrote Frederick to Finck, "is very great. Out of an army of 48,000 men, I have but 3,000. As I write, the rout is complete, and I am no longer master of my own troops. It is a cruel reverse. I shall not survive it. The consequences will be worse than the affair itself. I have no further resources, and, to conceal nothing, I believe all to be lost. I shall not survive the ruin of my country. Adieu forever."

Such was his tone on August 13, 1759. Two days later he is planning to profit by the delays of the allies and save his dominions from the triumphant forces of Soltikoff and Daun. For the failure of the allies to profit by Kunersdorf, M. Waddington seems more inclined to blame the Russian than the Austrian commander. Although Daun by instinct remained faithful to his defensive tactics, the damage inflicted on the Prussians would have been immeasurably greater but for the ridiculous idea of the Russian staff that it was now the turn of the Austrians to do something. One sharp and well-directed advance after Kunersdorf would have placed Frederick, Silesia, Brandenburg, and Prussia at the mercy of the Empress. It was the inherent weakness of a coalition, seconded by the mutual distrust of two mediocre generals, which cost the imperialists all that had been gained by the indomitable valor of the Russian troops.

M. Waddington's account of the war in India is remarkable chiefly for a sharp criticism of Lally, but we must content ourselves with quoting his general comment upon that unfortunate commander:

"Le choix du Ministère et du conseil de la Compagnie tomba sur le lieutenant-général de Lally-Tollendal; il ne fut pas heureux. Le nouveau commissaire-général n'avait aucune expérience du milieu où allait s'exercer son autorité. Brave soldat, actif, plein de zèle pour le service, mais impatient, irascible jusqu'à perdre tout contrôle de lui-même, dépourvu de jugement, avec cela fantasque, méfiant, hors des gonds quand il aurait fallu du sang-froid, plaisantant sans ménagement et hors de saison, Lally n'avait pas les qualités voulues pour le poste difficile auquel il était appelé."

To the American campaigns of 1758-1759 considerable space is allotted, and here, as elsewhere, M. Waddington writes from first-hand materials. His capital omission is a neglect to have procured Mr. Doughty's work on the siege of Quebec, which contains documents essential to an understanding of important details in the duel between Montcalm and Wolfe. Among single passages in this portion of the book, the following is perhaps the most energetic:

"Que dire des acteurs secondaires du drame? À l'exception du brave Lévis, qui se révéla homme d'énergie et de caractère, tous furent piteusement au dessous de leur tâche: Vaudreuil, Ramezai, la plupart des officiers supérieurs s'abandonnèrent à un découragement qui dégénéra en pusillanimité morale frisant la lâcheté; chez eux, à peine une lueur de bon sens bien vite effacée par l'exagération du danger qu'engendre l'hésitation; pas une conception virile, aucun sentiment du devoir de tout sacrifier à la défense du dépôt que la France leur avait confié."

In the course of the four volumes which he has already published on the war and its preliminaries, M. Waddington clears up or illustrates many thorny points. One more remains, namely, the diplomacy attending the Peace. The skill and learning which he has abundantly shown entitle us to expect from him a masterly exposition of this intricate and difficult subject.

The Teaching of Sir Henry Maine: An Inaugural Lecture. By Dr. Paul Vinogradoff. Henry Frowde. 1904.

In recent years few academic appointments have awakened so much interest as the nomination of Professor Vinogradoff to the Corpus chair of jurisprudence at Oxford. The advent of a Russian who has made himself more learned than the English in important departments of English legal and economic history, is a notable event; and the presence of a foreigner in the chair of jurisprudence recalls the distant fame of Magister Vacarius. Recognizing, perhaps, the unusual character of his position, Professor Vinogradoff has used the opportunity presented by his inaugural lecture to make a certain profession of faith in matters relating to his function. A disciple of Sir Henry Maine, he finds himself filling the place which Maine used to occupy, and it is through an interpretation of his predecessor's doctrine that he explains his own attitude towards the problems of jurisprudence.

The reaction against a man's fame which invariably sets in as soon as he is dead, has not left untouched the intellectual reputation of Maine. To the tribe of detractors Professor Vinogradoff makes clever rejoinder when he says, by way of general reference:

"It is not unusual nowadays to talk in a rather supercilious manner of the lack of erudition and accuracy, of the allusiveness and vagueness of Maine's writings. Those who indulge in such cheap criticism should rather try to realize what accounts for his having been a force in European thought, a potentate in a realm where parochial patronage and a mere aptitude for vulgarization are not recognized as titles to eminence."

That Maine could not examine with the minute care of the specialist all the subjects which his suggestive and creative thought presented to the world is matter of course, and we shall miss the point if we look for the defects of his qualities in his treatment of detail. Common sense, which was his sovereign characteristic, prevented him from cramping his data to fit his system, and of no one could it be said with less justice that his idea of a tragedy was a deduction killed by a fact. He projected a few great ideas and left the outlines to be filled in by his disciples, but how far he was from being a dilettante those know best who have followed him on his own ground. Professor Vinogradoff gives a just idea of his sanity and earnestness when he says:

"Maine was certainly not one of those builders of systems as they are to be found among German scholars, who sometimes, in exaggeration of their unrivalled learning, seem to move away from reality and to dwell in a fantastic region of their own, where they accumulate and dispose their materials according to requirements of speculation, without much regard for the facts of life. Nor was he subject to the spread of formalism which represents the natural exaggeration of the lucidity and order so characteristic of the French school: he never sacrificed the complexity of organic evolution to unity of conception and clearness of exposition. Whatever his failings, he undoubtedly possessed the merits of an Englishman in his search for the meaning of life as it really is."

Leaving aside all account of Maine's personality, and confining attention strictly to his thought, Professor Vinogradoff discovers a single end toward which the master's purpose was directed. "To connect the earliest notions of mankind as to law with the results of modern thought" was the aim of those three illuminating books, 'Ancient Law,' 'Early Law and Custom,' and 'Village Communities.' At the middle of the last century, legal examination of origins was still hampered by what Maine himself terms "*à-priori* theories based on the hypothesis of a law and a state of nature." His reaction against the philosophy of natural rights is strongly accentuated in every one of his works, and connected with it was that violent antipathy towards Rousseau which, taking the form of a prejudice, may be seen from beginning to end of 'Popular Government.' Less strong, but still marked, was his opposition to the analytical jurisprudence of Bentham and Austin. The cleverness of these men he readily admits, and is even willing to concede the value of their efforts; but between them and himself he feels that a gulf is fixed, since their abstractions are framed with reference to a type of man who does not exist. For example, his attitude towards the utilitarian dogmas of Austin is tersely summed up in his criticism of a view "which seems to imply that the authors and expositors of civilized systems of law are constrained, by a sort of external compulsion, to think in a particular way on legal principles and on the modes of arriving at juridical results."

In sketching the positive elements of Maine's thought, Professor Vinogradoff emphasizes the affinity between him and such defenders of organic development as Burke and Sir James Stephen. A profound distrust of revolutionary ideals and methods alienated him from contemporary French jurists, at the same time that a study of

Savigny, Eichhorn, and Puchta placed him in debt to the historical jurisprudence of Germany. Hence may be traced to a considerable extent his belief that the progress made by a given generation is very slight when compared with its dependence upon inherited institutions. In the passage where he criticises Montesquieu for underrating the stability of human nature, he concludes:

"The truth is, that the stable part of our mental, moral and physical constitution is the largest part of it, and the resistance it opposes to change is such that, though the variations of human society in a portion of the world are plain enough, they are neither so rapid nor so extensive that their amount, character, and general direction cannot be ascertained."

This is the utterance upon which Professor Vinogradoff lays most stress when seeking to trace the development of Maine's ideas, and to mark him off from German Conservatives like Savigny in law and Hegel in philosophy. The appeal of Savigny is to history alone, and in general the demand for scientific interpretation of social changes opened up fresh issues. Maine, with all his conservatism, was able to see that social forces are subject to constant modification through intercourse, and that these modifications must be taken account of. Distinguishing clearly in his own thought between the majority and the remnant, he admits the possibility of progress through the efforts of the latter. The methods of science appealed to him, and he was impressed by the phenomenon of change. It follows that law presented itself to his mind under the form of an historical evolution rather than as a body of immutable and divinely appointed rules.

How Maine treated the questions of testament, contract, feudalism, family ties, and the ownership of land, is known to all students of modern thought, and we shall not attempt to discuss here his view of the relations originally existing between the individual and the community. More important for present purposes are the propositions which Professor Vinogradoff finds to be essential in his teaching, and which the lecturer states in set form not because of their novelty, but because he is ready to subscribe them. They are four in number, and deserve to be quoted as the central feature of this lecture:

"(1.) The study of law is not merely a preparation for professional duties and an introduction to the art of handling professional problems. It may also be treated as a scientific subject.

"(2.) Two methods of scientific investigation may be applied to the study of law: the method of deductive analysis on the basis of abstractions from the present state of legal ideas and rules, and the method of inductive generalization on the basis of historical and ethnographical observations.

"(3.) In the domain of inductive jurisprudence, law appears as one of the expressions of history, and history is taken in the wide sense of all knowledge as to the social evolution of mankind.

"(4) Insomuch as every science ought to be directed to the discovery of laws—that is, general principles governing particular cases—the historical method of jurisprudence is necessarily a comparative one."

The keenness of Professor Vinogradoff's criticism is admirably illustrated by the form and arrangement of these propositions. The spirit in which he undertakes his duties at Oxford is revealed with equal clearness by his concluding words:

"It has always been understood in this country that tradition, combined with definite aims, is one of the greatest forces of civilization: it lifts the efforts of man from the restrictions of individual insignificance to mighty collective power. Appealing to a noble tradition, which has to be kept up with reverence and zeal, I will ask you, in conclusion, to admit me to your celebrated university as one who wishes, so far as it rests with him, to follow in the footsteps of your great teacher and thinker."

Russian Affairs. By Geoffrey Drage. E. P. Dutton. 1904.

Russia: Her Strength and her Weakness. By Wolf von Schierbrand. Harpers. 1904.

Of the many books about Russia that have appeared in recent years Mr. Drage's 'Russian Affairs' is one of the best; in fact, to get anything as good of its kind in English we should have to turn to the translation of M. Anatole Leroy-Beaulieu's 'L'Empire des Tsars' or to Mr. Wallace's 'Russia.' Without being the equal of either of them, this new work is none the less really valuable, and bears the stamp of painstaking labor as well as of intelligent and sober thought. It is crammed full of pertinent facts, well digested and well handled. Throughout, the author remains master of his subject, which he treats concisely and effectively, even if not always with sufficient system.

After a short historical introduction, Mr. Drage in his first chapter takes up the subject of Russian ambitions. He does this by setting before us the views and characters of the Slavophiles, of Mr. Pobiedonostseff, Count Tolstoy, Prince Uktomsky, and others. In a few pages we thus get an impression not only of certain interesting personalities, but also of a number of widely different views, all of which have their partisans and their influence. Chapter II. is about Agriculture, and unfolds once more the sombre picture drawn by most recent writers of its present condition in the most fertile parts of the empire. Chapter III. is devoted to Industry. Here the writer states briefly the facts of the recent development and the existing crisis, but he rather avoids drawing general conclusions. This is perhaps wise, as the subject is very complicated, and the disturbance produced by the Japanese war may prevent posterity from ever being able to form a final judgment of what would have been the fate of Russian industry if peace had been maintained. Chapter IV. takes up Commerce; under Chapter V., Finance, Mr. Drage discusses the system of M. de Witte, and though he evidently admires the ability shown by the latter in his ten years of office, he is inclined to accept the criticisms of that statesman's system and to regard it as having broken down. Still, he does not express himself very positively on the subject, and, in the much debated question of the spirit monopoly, goes so far only as to say that his "impression is unfavorable." Chapter VI. is given up to Poland, Finland, and the Baltic Provinces; Chapter VII. to dependencies (*i. e.*, Northern and Central Asia); and there is a Conclusion, which is "not a summary of the book," but a number of miscellaneous observations. At the end we have appendices consisting of statistics, reprints of treaties, etc.

Everywhere Mr. Drage has striven, and usually with success, to maintain a tone of studious moderation. His intention has obviously been to write a work that should be judicial as well as interesting and instructive. In this, on the whole, he has succeeded. He has not, however, escaped certain faults. To begin with, careful as he is, he has not always avoided the danger which appears so peculiarly to beset writers about Russia—that of making very sweeping statements on insufficient evidence. Without exactly denying many of his dicta, we should like a good deal more proof before we accept them. In the second place, the authors that he freely cites are of unequal value—indeed, they are not infrequently inferior to himself, so that at times we are less convinced by his quotations than if he had put forward his own assertion. In his judgment of international affairs, too, he cannot be acquitted of partiality. While not violent or grossly unfair, like so many Russophobe declaimers, he still writes as an Englishman chiefly interested in "Russian encroachments" from the point of view of "British interests." This is a pity, for it prevents him from being an unprejudiced critic in the part of his book which deals with foreign politics. Perhaps this would be too much to ask under the circumstances; none the less, a partisan tone is a blunder in a work of this kind.

It must also be remembered that several of the facts quoted are capable of different interpretation, and here and there we notice a positive error in detail. For instance, it is far from true that (p. 462) "the retrocession of the Liaotung peninsula, on the mediation of Russia, France, and Germany, led ultimately to the loss of all the advantages which Japan had gained by the war." Besides acquiring a totally new position in the world and receiving a considerable war indemnity, which she has expended on fresh armaments, Japan also obtained the valuable island of Formosa and the small but strategically important Pescadores. Again, the railway from Chemulpo to Seul was not "built by a Japanese company" (p. 463), but by an American and sold to the Japanese. However, we have no wish to pick flaws of this kind, but prefer to congratulate Mr. Drage on having furnished the public with a decidedly useful book.

We regret that we cannot pay the same compliment to Mr. Wolf von Schierbrand. His title, 'Russia: Her Strength and her Weakness,' and the first sentence of his preface, seem to indicate a desire to be impartial, but this is not realized. Drawing his information from such works as Bruggen's 'Das heutige Russland,' which, at times, he paraphrases or translates almost literally (without acknowledgment), he has filled up some three hundred pages with diatribe as monotonous as it is unprofitable. We do not wish to deny a certain proportion of truth to his remarks even if they tell us nothing that is new; but empty tirades of this sort are seldom of the slightest value.

Songs of Motherhood. Selected by Elizabeth Johnson Huckel. New York: Macmillan. 1904.

This well-meant but heterogeneous collection ranges from Tennyson's famous passage in "The Princess," "The woman's cause is man's," to rhymes of the nursery; quotes from the Gospels, the Psalms, and the Proverbs, and takes a prose passage from Phillips Brooks. The metrical selections are divided equally between male and

female writers, and such poetic distinction as there is in them is certainly not preeminently on the side of the latter. A fairly discriminating florilegium, indeed, from the sum of English metrics would show that parentage has evoked a higher order of thought as well as of expression from the poets than parentage through maternity has from the poetesses. In other words, in a field of experience peculiarly their own, women do not seem to have been carried by emotion, introspection, or imagination to heights of poetic utterance unattainable by the other sex. This is at least curious.

Mrs. Elaine Goodale Eastman sings in her "Madonna" (p. 7):

"And yet to no eye save the mother's
Life's difficult secret is plain;
She has sounded the deeps of creation,
She has passed through the furnace of pain."

But has she made this secret plain to the other half of creation? Mary Felton (p. 86) kisses tenderly her baby's feet

"With thoughts which none but mothers understand"

—possibly; but some fathers' thoughts on a like provocation have been much more valuable, intrinsically and poetically. There is nothing within these covers to compare with that stirring "Christmas Carol" of Coleridge's, of which the third stanza reads:

"She listened to the tale divine,
And closer still the Babe she prest;
And while she cried, The Babe is mine!
The milk rushed faster to her breast:
Joy rose within her like a summer's morn;
Peace, Peace on Earth! the Prince of Peace is born."

One may compare this directly with the treatment of the same theme in Mary D. Brine's "The New-Born King" (p. 30).

Again to quote Coleridge, let us ask if the following extract from his Ode to the Duchess of Devonshire suggests his own sex, or is not as purely feminine as any woman could have made the same train of thought:

"You were a mother! That most holy name,
Which Heaven and Nature bless,
I may not vilely prostitute to those
Whose infants owe them less
Than the poor caterpillar owes
Its gaudy parent fly.
You were a mother! at your bosom fed
The babes that loved you. You, with laughing eye,
Each twilight thought, each nascent feeling read,
Which you yourself created. O! delight!
A second time to be a mother,
Without the mother's bitter groans.
Another thought, and yet another,
By touch or taste, by looks or tones,
O'er growing sense to roll,
The mother of your infant's soul."

The juxtaposition of the fly and the Duchess reminds us that science, or the perception of fact, is surmised to be at the bottom of what is called the present break in high poetical production. We may be sure it will not extirpate poetizing, and equally sure that the poets will find a *modus vivendi* with it, as Tennyson foreshadowed in his "By an Evolutionist." When that concord arrives, what will have become of the religious view of the child as a divine gift, or even of the formula, "The Lord giveth, the Lord taketh away"?

A Dictionary of the Drama. By W. Davenport Adams. Philadelphia: J. B. Lippincott Co. 1904.

This is the first of two volumes of which the purpose and general scope are tersely set forth in the preface—"to provide the student with a handy means of ready reference to the leading facts of the history of the theatre in the United Kingdom and the United States." In the list of subjects are playhouses and their designers, plays and play-writers, actors, critics, scenic and musical illustrators, theatrical terms and stage literature. In other words, the work professes to give, in alphabetical epitome, a digest of everything of importance contained in the vast extant body of British and American theatrical publications, whether inventive, biographical, or descriptive, together with special information not to be had elsewhere. This, plainly, is a large undertaking, even though the author expressly disclaims any attempt at an impossible completeness; and the comparative fulness, the compactness, and general accuracy with which it has been accomplished furnish conclusive proof of the most laborious and careful compilation. Beyond question the book will be an immense convenience, not only to contemporary writers about the stage, but to all earnest students of the literary theatre, who will find in it abundant clues to special and curious knowledge, especially concerning the characters and plays of the older drama, once famous, but long forgotten, except by the very few. Whether the book is likely to be in active demand by the public at large is another question. Certainly no theatrical library can afford to be without it.

A tolerably careful cross-examination of the six hundred pages of which this volume is composed, including alphabetical matter from A to G inclusive, indicates that the record of the British stage is remarkably full and correct and well up to date. Nothing of real importance seems to have been omitted, while a mass of matter of no imaginable consequence has been preserved. The main defect of the work, indeed, is due to the absence of judicious editing. There is no pretence, of course, of supplying an index to every actor, dead or living, or to every piece that has ever been played or entered at Stationers' Hall. Some principle of selection must have been applied, but the nature of it defies conjecture. Names of some of the most ephemeral farces, the silliest burlesques, and most worthless plays, as well as of actors of no repute or significance, occupy space which might easily have been used to better purpose. In the allotment of space to actors of the second, third, or fourth rate the same lack of proportion is manifest. The failure to make any mention of Sarah Bernhardt, Coquelin, or Duse, or other foreign players, is doubtless deliberate—in one sense they do not belong to the British stage; but surely the fact of their long and brilliant connection with it was worth a brief note. Other omissions are more strange. Charles Frohman is referred to as the manager of the Duke of York's Theatre, but there is not a word concerning his control of the Syndicate, which is one of the most portentous influences for the British theatrical future. Perhaps this may come later under "Syndicate." A curious slip is the description of Asia Booth Clarke, wife of John S. Clarke, as the daughter of Edwin Booth, who was her younger brother. The quoted dates ought to have revealed this error.

As a condensed record of American stage history, especially during the last twenty-five years, the Dictionary is less satisfactory. In all matters relating to the later part of the eighteenth and the first three-quarters of the nineteenth century it is well informed, but many of the theatrical books published during the last decade seem to have escaped observation. Here again the principle of selection is most arbitrary and puzzling. Some players of very recent date and very shadowy repute are carefully noted, while many long-established favorites are excluded. Thus, there is no mention of Nat Goodwin, or Henrietta Crosman, or William Faversham, Ethel Barrymore, Georgia Cayvan, or Viola Allen. Among favorite players of an older date whose names do not appear are George Boniface, William Floyd, Edward Eddy, Mrs. F. B. Conway, Effie Germon, Susan Denning, Ben de Bar, and Harry Edwards. Some of these, it should be noted, were known in London as well as here. A paragraph devoted to Kate Claxton does not refer to "The Two Orphans," one of the most successful plays of modern times, with which she was identified for thirty years. For an account of the Boston theatres the searcher is referred to W. W. Clapp's work, published in 1852. Among American dramatists there is no mention of T. B. Aldrich, although his masterly little "Mercedes" has been performed in London; of W. C. De Mille, Horace Fry, or Leonard Grover. The name of A. R. Cazauran appears, but without allusion to the inestimable work he did for the Union Square Theatre.

Other omissions could doubtless be discovered, but the book is, nevertheless, a very good one, and the investigator, in looking for slips, is constantly surprised by finding instead new evidence of thoroughness.

Modern Musical Drift. By W. J. Henderson. Longmans, Green & Co.

"Where doth dear music go?" asks Mr. Henderson in a prefatory poem addressed to Mr. James Huneker. "To the dogs," is the answer given by his book. Mr. Henderson has suffered many winters of discontent in the concert halls and opera houses of New York, and has now, apparently, reached a point where every entertainment seems to him a public nuisance, every player or singer an enemy of the republic. In the dim and distant past, when he wrote his Life of Wagner (1901), he still found much to admire, even in the despicable "Parsifal." The readers of that work were told concerning it that "its moving power lies in its grasp on the secret life of every man and woman who goes to witness its performance"; that "its musical plan is one of peculiar power, and its outward aspects are of great beauty"; that the second act is "rich in luscious melody, spontaneous, dance-like in form and color"; that in the whole work "the combination of the musical ideas is so subtle, the building of the large mood-pictures of which they are the elements so masterly, the effect of the general result so potent with the hearer, that," etc. In 'Modern Musical Drift,' on the contrary, we are told that "Parsifal" is "the child of Wagner's artistic decrepitude," "a most imposing pageant set to unimposing music"; that its poem is "almost utterly devoid of those great basic elements which make human life dramatic for men and women"; that the Klingsor scene is "cheap and paltry claptrap"; that the flower-maiden music is " 'Tannhäuser' and water, and very poor water at that"; that the last act is "a desert of tedium, with oases of musical verdure," and so on.

Which of these two Hendersons is the

bewildered reader to follow as a guide? And what is he to think of Wagner as a poet? For years Mr. Henderson has done good service by urging opera-goers to pay more attention to the Wagner poems if they would fully comprehend the music. In the biography he says (in the chapter on "Tristan"): "As is invariably the case, his treatment of the story draws together all the beauties of the original material and moulds them into a compact, consistent whole, instinct with dramatic force and poetic beauty." In the new volume he apologizes for his enthusiasm, and declares that Wagner was "just a dramatist, and nothing more." However, he kindly admits that he was a genius, after all, and proceeds to analyze the Nibelung poems in a quite friendly and sympathetic spirit, calculated to soothe the feelings of Wagnerites ruffled by his remarks on "Parsifal"—remarks, by the way, that are strangely similar to those made by Mr. Huneker a year ago and by the late Dr. Hanslick twenty-two years ago. There is nothing new under the sun (or in the *Sun*), and, in connection with this whole affair, it is interesting to recall the words of Saint-Saëns regarding one of Wagner's music dramas: "A thousand critics writing each a thousand lines a day for ten years would injure this work about as much as a child's breath would go toward overthrowing the pyramids of Egypt"; and the remark of the historian, Dr. Riemann, that "criticisms like those of Moritz Hauptmann on Wagner's early operas up to 'Tannhäuser,' or those of Hanslick on the later ones, may be left safely to their fate; they will provoke the pitying smiles of future generations."

The chapter on "Isolde's Serving-Woman" is excellent, and does much to break the force of Mr. Henderson's "confession." In the following section of eighty pages he parts company with Mr. Huneker; he does not particularly admire Richard Strauss. Why, then, give so much space to him? Why not devote chapters to the real men of genius of our time—to Grieg, Saint-Saëns, MacDowell, and others? Alas! our author would hardly rank them as men of genius. In this very volume he pokes fun at Saint-Saëns, and concerning even Liszt he says: "The abbé was something of a mystic, too, but he knew he was not a genius." Now, this is most reprehensible. Mr. Henderson has no right to mislead his readers on this point. Liszt's letters show, *passim*, that he believed in his own genius; one of his favorite expressions was: "I can wait." Richard Strauss, a mere imitator of Liszt and Berlioz, is now receiving the honors and the attention withheld from those men during their lifetime. This Mr. Henderson should have made clear in his lengthy and suggestive historic discourse on Strauss and his musical ancestry.

His final chapter, "Aux Italiens," is concerned with Italian opera of to-day and of the time when "Lucia" was created, which opera the author happily calls "the classic of the musically unprogressive."

An Irishman's Story. By Justin McCarthy. Macmillan Co. 1904.

This is intended as a personal rather than a political narrative, the author having kept it out of the current of the political business of his life as far as might be, endeavoring to make his account a simple autobiography. Nevertheless, he was, throughout his life, so steeped in politics that in the end we get a picture of a politician, or rather devotee of a political cause. Of the author as a novelist, as an historian, as a traveller, as a lecturer and as a journalist, we hear a great deal, but we cannot help feeling throughout that, pleasant reading as this part of the book is, the portion of the author's career on which it is based was all secondary to the great object of his life, the establishment of freedom in Ireland. Mr. McCarthy tells us that he has been dependent upon his pen, and he has worked hard with it; but he cannot be said to have played an important part in literature. His simple and direct style is admirably adapted to narrative, and if we were asked to pick out the piece of work by which he is likely to be longest remembered, we should guess that it would be the 'History of Our Own Times.' In the present volume, after all is said, we have found more interest in the chapters which relate to the Parnell Commission, the events which took place in Committee Room Fifteen, and our author's temporary headship of the anti-Parnell wing of the Irish party, than in anything else, except, perhaps, the reminiscences of his early youth in Ireland.

Mr. McCarthy's life—there is no boasting or egotism in these simple pages—has been unquestionably that of a patriot in the proper sense. Honor he has obtained, but no profit; and toward the close he had to go back to Ireland to be hooted and abused for daring to lend his efforts to keep his party to a sane course. Through his connection with the Irish Exhibition he became involved in pecuniary losses, with which, but for his altruism, he would probably never have been burdened; it was a case of *sic vos non vobis*, as we may say, "with a vengeance"; and one cannot but regret that the liability could not have been once for all lifted from his shoulders by those for whom he had labored so unselfishly. Throughout his life he had been distracted by that nightmare of generous spirits—the constant necessity of working at a career of drudgery in order to be able to devote himself to his beloved cause. A physical breakdown of some sort was to have been foreseen. The reader is relieved in the end to find that Literature has made an amends with a pension for the damage done by politics.

For many years, almost the working lifetime of an ordinary man, Mr. McCarthy sat in the House of Commons for Longford. He differed from many other representatives of Irish seats in being more cosmopolitan. He knew America, he knew England, he had some acquaintance with Europe; he was a citizen of the republic of letters. Parnell himself, great leader as he was, was provincial in being bitter, and it is curious to see how badly, when the great crisis of his life came, he gauged public opinion. Here Mr. McCarthy's mildness stood him in good stead.

This quality of mildness gives to the book a flavor of a rather odd sort. Where we might have expected violent opinions to emerge, we find ourselves in an atmosphere of complete serenity. Mr. McCarthy loves his country, but he does not hate England or the House of Commons. He has closed his career there with the good wishes of all parties, and his autobiography is a pleasant message of good will from one finally withdrawn from active life.

Heroes of the Storm. By William D. O'Connor. Boston: Houghton, Mifflin & Co., 1904.

This selected collection of records of wrecks on the coasts and lakes of the United States appeared in the first instance in various annual reports of our Life-Saving Service. The late Mr. O'Connor, an official of the Bureau, compiled them from memoranda of subordinates. In their present form he is designated as their author. The fact of these records having already been printed by the Government as official documents in no wise detracts from their interest. The worthy work of the Life-Saving Service on our coasts and lakes cannot secure too wide publicity. Under the above taking title, it is to be hoped these papers will meet with popular favor. The title, in many instances, applies with as much force to those who are rescued as to their rescuers. In a howling winter gale, with ice making with every break of a wave and encasing hull and rigging of a stranded ship, there is no more dogged heroism than is displayed by the benumbed or frost-bitten sailorman in hauling in the line shot across his ship by life-savers on the beach, and in setting up the hawser for the employment of the breeches buoy. Or what is more trying to the nerves or requires greater fortitude in the shipwrecked, in the same winter gale, than to be lashed aloft in the rigging of a ship, slowly freezing to death in full view of blazing fires on the shore, two hundred yards to leeward, while the life-saving crews stand helpless, unable to launch a boat on account of the raging surf, or to shoot a line into the rigging with any hope of the chilled castaways being able to secure it? Under precisely these conditions five men who had taken refuge in the rigging of a schooner stranded in a fierce winter gale on the south shore of Long Island a few years ago, dropped one by one, frozen stiff, into the boiling sea.

For the harvesting of wrecks our coast is a hospitable one. From Cape Cod to Monomoy Point, from two miles more or less west of Montauk Point on the Long Island shore, thence along the New Jersey and southern littorals to the coral reefs of Florida, our beaches are of sand, with an outer bar of the same material running parallel with them two hundred yards more or less distant. Yet on no rocky coast are so many vessels stranded or totally lost as on our great stretches of treacherous shoals; and nowhere is a Life-Saving Service more necessary or more effectively employed. Of details connected with the rescue of shipwrecked mariners and ocean travellers 'Heroes of the Storm' offers a copious supply.

The Voyages of Pedro Fernandez de Quiros, 1595-1606. Translated and Edited by Sir Clements Markham, K.C.B., F.R.S. London: The Hakluyt Society. Two volumes.

This fresh contribution to the notable list of the Hakluyt Society, the translating and editing being its president's, relates to the Spanish attempts at the close of the sixteenth and beginning of the seventeenth century to discover the great southern con-

tinent then supposed to exist at the antipodes of Africa and shown on many maps. Alvaro de Mendaña had discovered the Solomon Islands in 1565, and in 1595 made a second trip for the exploration of the archipelago of which they were thought to be a part, if not also of the continental land which it was generally assumed by cartographers must exist in the southern seas, to "balance," as it were, the land and water account of the universe. Quiros was his chief pilot on this second expedition, which resulted in nothing more than the discovery of a number of unimportant islands south of the equator, and in an ill-advised attempt at settlement on the island of Santa Cruz, east of New Guinea.

Quiros spent eight years in efforts which were finally rewarded by his being dispatched from Peru in 1604 for the discovery of the "Southern Continent," having worn out the Court of Spain by his importunities and having been aided by the authority of the Pope, eager for the redemption of the thousands, if not millions, of souls confidently presumed to inhabit the yet undiscovered realms. Quiros, had he kept on his course as originally mapped out, would have discovered New Zealand, and possibly the continent of Australia (which has taken its name, at any rate, from the grandiloquent title of "Australia of the Holy Spirit" that Quiros conferred upon his whilom settlement on the largest island of the New Hebrides group of Capt. Cook's later discoveries). By turning again toward the equator, he lost his great opportunity, and Australia was left to be discovered by another race in another century. Disaffection on shipboard had something to do with the failure, as it did with the tame ending of Quiros's voyages (for in the eight succeeding years he frittered away his life endeavoring to get another commission in the southern seas); but his discoveries were notable, nevertheless, and the journey of his second in command, with the two vessels from which Quiros became separated, resulted in the discovery of Torres Strait (named after this commander) and the exploration of the south and west coasts of New Guinea.

The documents presented in these two volumes dovetail, to some extent, into early Spanish history in the Philippines; for Torres steered from New Guinea and the Moluccas to Manila, as Quiros himself had in 1595 taken the mutinous and disease-ridden company on board the vessels of Mendaña (who died in Santa Cruz) to Manila through Guam. Quiros's account of this voyage, in particular, contains some few interesting data regarding the Philippines of the time. His own reports of the two voyages (published at Madrid in 1876) form the principal part of this work. They were probably written by Belmonte Bermudez, a young poet, his companion; and their descriptions of new fruits and animals, of the encounters with strange peoples, nearly always disastrous for the latter, and of the high-sounding formalities of taking possession of new lands, not to mention the human strifes and jealousies aboard, make reading for which one may well lay aside the modern "historical novel."

The volumes and the accompanying maps are put forth in the solid, but tasteful, manner one expects from the Hakluyt Society. The editing has been excellently done; the translation, it would seem, not quite so well.

Japanese Life in Town and Country. By George William Knox. G. P. Putnam's Sons.

For the American school of writers on Japan, it has been the congenial task to seek to understand and make known the workings of the Japanese mind. Others have dealt more with externals, these with psychology. True to the tendency of his fellow-countrymen, Dr. Knox has sought to know the inner, rather than the outer man of Nippon, and his charming pages are concerned with mind rather than matter. Keenly as the student will enjoy this rather scholastic work, rich in academic refinements of theme and style, the general reader will be disappointed in seeking a picture of life in its daily course and average routine. Both where dwellings mass and paddy-fields spread over the landscape, the author has dwelt long, but one would hardly guess this from his text, which smells too much of the lamp, and suggests pigeonhole accumulations emptied at the publisher's call. Perspective overpowers foreground. We have history rather than description. Nevertheless, text, illustrations, map and index make a delightful book, all the more welcome because the ablest scholar in Japanese Confucianism that America has yet produced, has here given us impressions of man and nature in the Archipelago.

Five chapters, in rapid, vivid picturing, tell of the point of view, the tradition, Asiatic civilization, the feudal wars and the awakening. A little more knowledge of economics and the forces of nature would have much enhanced the value of these clear, condensed and illuminating sketches. Yet they are such as only a scholar and a philosopher could write. In the four chapters on Buddhism, the religion of the common people; Confucianism, the religion of educated men; philosophy for the people; and the way of the "Samurai"—we have a master hand leading us into the world of Japanese thought. Few, indeed, of the many dwellers in Japan have examined the creeds, the evolution of thought, and the mental environment of the natives of Nippon with more penetrating discernment.

In two late chapers on the common folks, but hardly with the success of Hamerton, who brought France into our own homes, Dr. Knox portrays and philosophizes. In the three chapters devoted to the "Samurai" he describes the evolution, the status in old and the career in new Japan of these virtual creators and leaders of the militant nation. No pictures of Tosa, home of Itagaki and Kataoka, leaders of political progress and liberalism, out of whose mountains the ancient oracle declared freedom was to flow, can be found in literature like those given in choicest diction in this book. In this part of the work, including Arai Hakuseki's wonderful revelation in autobiography of eighteenth-century Japan, the author is at his very best. The charm of it all is that Dr. Knox writes from first-hand acquaintance with original documents. In telling us, for example, of language, literature and education, he is no echo, but a searcher. In balancing opposite opinions, while his judgments are clear, his sympathies are manifest and frankly confessed as being necessary to true interpretation.

Experimental Psychology and its Bearing upon Culture. By George Malcolm Stratton. The Macmillan Co. 8vo, pp. 331.

This book, scientifically of no great importance, is charmingly written, and is as thoroughly sound as it is popular. We are here introduced to the science of experimental psychology nearly as it appears to the researcher himself. We remark in the new science the failure of the extravagant hopes of forty years ago, without at all acknowledging that its present state bids us despair of greater things yet to come with profounder methods of reasoning, and without depreciating the few truths of real importance that have been ascertained. Perhaps Professor Stratton makes his subject appear less scientific than it really is by being a bit too fond of discussions. We will not say that he sets up absolute men of straw in order to afford his readers the instructive exercise of knocking them down; but it does seem to us that he has now and then withheld decisive silencers of sundry flimsy arguments for the sake of considering them from several points of view. For example, the question whether mental phenomena are susceptible of measurement, to which a whole chapter is devoted, could have been settled at once by the remark that the logico-mathematicians have demonstrated (as a moment's attention to Clifford's 'Analytical Metrics' would show) that number never can signify anything but relative order of succession.

Suppose there were no solid bodies in the world, but everything was liquid: that would not involve any alteration of the properties of pure space. Or suppose that the law of the displacement of bodies we called "rigid" were so different from what it is that while all parts of them that lay along straight lines should always remain in straight lines, yet the lengths, breadths, and thicknesses should be different according to their positions in space. To suppose that is not to suppose that pure space would be anywise different from the space of actual fact; the bodies in it would alone have different properties from those they actually have; and our present designations of lengths would have whatever truth to pure space they now have. But we should then, no doubt, make all our measurements with such "rigid" standards as we could then procure; and such measurement (so long as it was self-consistent) would be just as true to pure space as ours is. The truth is, that the relation of more and less is one thing, and a system of quantity quite another, and that quantity does not belong to space in itself, or to any continuum in itself, but belongs to one continuum (say our yard-stick) in its changing relations to another. Measurement has all the truth that it belongs to its nature to have if it represents the order of succession of parts, the "connectivity," as mathematicians say.

For example, when Ptolemy marked six grades of brightness among stars and numbered them successively, it was a mathematical necessity that those numbers and the fractional divisions of their intervals should be capable of being employed in useful computations (by least squares, for

instance), since they, at all events, expressed the *betweennesses* of the different amounts of light received from the stars, and Ptolemy's values necessarily must be some mathematical function of the amount of light. Those star-magnitudes had come to be traditional among astronomers, who had inserted intermediate "tenths of magnitudes" when photometry was first successfully applied to the light of the stars by Seidel. It then turned out that not only was there in fact such a law of connection between the values of the star-magnitudes and the quantities of light (as there necessarily must be), but, furthermore, that this law was no other than Fechner's psychophysical law. Ptolemy had made the differences between successive magnitudes such as appeared to him equal (though these differences were so large that he subdivided them, ultimately); and that mode of estimating the quantity of light-sensation was in sufficient accord with the principle that a given *ratio* of physical brightness between two stars gives the same *difference* of psychological brightness whether on a very clear night, when the stars shine bright, or on a night when they are not nearly as bright. The "photometric magnitudes" of the stars now universally employed by astronomers do not essentially differ from the magnitudes of Ptolemy, except for a small modification made for the sake of facility of computation.

Since we are always able, subject to more or less uncertainty, to arrange feelings in orders of succession, it follows that they are capable of being measured, with probable errors smaller or greater, such as belong to all measurements.

In like manner, the question of the nature of "subconscious" thought, which occupies two chapters, and concerning which much inconsequential talk is retailed, could at once have been put upon a scientific footing by first establishing certain incontrovertible logical principles resting on mathematics, which show exactly what ought to be our attitude in view of the given facts—an attitude substantially the very same that Professor Stratton adopts, but which his discursive treatment may lead readers to deem less scientific than it really is.

The author naturally makes those parts of his science the most interesting in which he has himself made important advances; as, for example, in regard to the enjoyment of sensations. The contrast between the graceful form of a Grecian vase and the horrid crooked path of the eye as it contemplates that form is curious indeed. But to a catalogue of the volume's interesting points there would scarce be an end.

BOOKS OF THE WEEK.

Abbott, Arthur Vaughan. The Electrical Transmission of Energy. D. Van Nostrand Co. $5 net.

The Inferno of Dante

Translated, with notes, into English verse.

By MARVIN R. VINCENT, D.D., LL.D. $1.50 net (Postage extra)

A translation into the English ten-syllable line, without rhyme (which has a very close affinity with Dante's verse) and is at the same time an accurate and almost literal rendering of the original text without sacrificing the just claims of the laws of rhythm and accent of English verse.

The Italian Poets Since Dante

By WILLIAM EVERETT. $1.50 net (postage 14 cts.)

Considers Petrarch, Ariosto, Alfieri, Tasso, Leopardi and others, not only leading figures, but lesser lights, such as Parini and Monti. A scholarly and popular consideration of a subject heretofore neglected in English, and calling loudly for treatment.

Great Englishmen of the Sixteenth Century

By SIDNEY LEE

With 6 portraits, $1.75 net. (Postage 16 cents)

Mr. Lee has been said to have "something like a genius," for biography. The remark was made apropos of his Lives of Shakespeare and of Queen Victoria, but these chapters illustrate it as forcibly.

The lectures with which Mr. Sidney Lee made so great a success in his extensive tour of American Universities a year ago, are here collected, with his revision, in a group of biographical studies which admirably illustrate his exceptional power in this direction.

CONTENTS

The Renaissance in England
Sir Thomas More
Sir Philip Sidney
Sir Walter Raleigh
Edmund Spencer
Francis Bacon

Ready Saturday: HENRY JAMES'S New Novel!

THE GOLDEN BOWL

Two volumes, $2.50.

This international story is a thoroughly dramatic work. It will make a distinctively popular appeal, and is sure to attract the wider audience as well as the elect whom Mr. James always interests more than any other living writer.

HISTORY of ANDREW JACKSON

Pioneer, Patriot, Soldier, Politician, President

By AUGUSTUS C. BUELL

Author of "Paul Jones," now in its Eighth Edition

Two volumes. Illustrated, $4.00 net (expressage extra)

"The most casual reading of his work is sufficient to show what pains he took to sift all the evidence on disputed points, and to secure accuracy at every step. But no one is likely to rest content with a casual reading, for the quality which chiefly distinguishes the volumes is that of enthralling interest." —*Newark News.*

Gainsborough

And His Place in English Art

By SIR WALTER ARMSTRONG

Director of the National Gallery, Ireland, and author of "Sir Joshua Reynolds." With 48 full-page illustrations in half-tone and 4 in photogravure. $3.50 *net.*

FETICHISM IN WEST AFRICA

Forty Years' Observation of Native Customs and Superstitions

By Rev. ROBERT HAMILL NASSAU M.D., S.T.D.

Illustrated, $2.50 net. (Postage 16 cents.)

"Every page he writes, from the modest preface outlining his missionary labors to the two long chapters of fetish tales at the end, is full of information and more exciting than any novel."—*N. Y. Sun.*

TALES OF FRANCE

Edited by **Arnold Guyot Cameron,** A.M., Ph.D., Woodhull Professor of French in Princeton University.

Cloth, 12mo, 351 pages, with portraits.

Price, $1.00

THESE tales illustrate both the north and the south of France, as well as some of the conditions of its capital. They reveal the love of the martial in the nation and give a better understanding of its spirit. Carefully chosen from the best of the short-story writers, including Jules Claretie and François Coppée, they correlate and contrast some of the factors which compose the French character by the editor discusses the *Conte* in its reter. An extended and scholarly introduction lation to the history and development of the country. The stories themselves are most interesting in their subject-matter, and well representative of the best of French literary style. A complete vocabulary is included, and numerous notes explain all historical and literary allusions.

THE GREAT AMERICAN CANALS:

THE CHESAPEAKE AND OHIO; THE PENNSYLVANIA; AND THE ERIE CANALS.

BY

ARCHER BUTLER HULBERT

With Maps and Plates

2 vols. Crown 8vo, cloth, uncut, gilt tops, $5.00 net. Express prepaid.

These two important volumes are just issued in the Historic Highways of America series.

Life in the heyday of the canal boats, when canals were the great immigrant and freight routes. Portage Railways and the lock navigation of rivers. Special reference is made to the influence of canals in directing trade and immigration in the days when they were controlling factors in our national development. and attention is given to the study of the early plans of western irrigation of George Washington.

"In interest and suggestions the two volumes may well tempt many an engineer to add somewhat to his library, particularly as good books dealing with the history of early American engineering works are few and far between."—*Engineering News.*

"It is needless to say that Mr. Hulbert has made an interesting work of his subject and set forth much useful information—a worthy addition to this valuable series."—*Chicago Inter-Ocean.*

"His style is graphic and effective . . . an invaluable contribution to the makings of American history."—*New York Evening Post.*

NEW BOOKS SCRIBNERS

By THOMAS NELSON PAGE

THE NEGRO: THE SOUTHERNER'S PROBLEM

Presenting a Conservative Southerner's Views on the Present Relations of the Two Races in the South, with an Account of the Steps by which those Relations Have Come About

To the great value and interest of the work in itself much is added by the author's pre-eminence as the sympathetic depictor, the historian, as it were, of the old relation between master and slave, and of the mistakes that have been made since the war; in short, this book presents the matured opinions, to-day, of the author of "Marse Chan."

12mo, $1.25. (Postage 13 cents.)

CONTENTS

Slavery and the old Relation between the Southern Whites and Blacks
Some of the Difficulties and Fallacies

The Story of Art Throughout the Ages *An Illustrated Record*

By SALOMON REINACH

The translation by Florence Simmons. With 600 miniature reproductions of famous works mentioned in the text. $2.00 net. (Postage extra.)

A work which is remarkable scarcely more for its mastery of the subject than for its lucid, terse and piquant style, and which is destined to recognition as a standard. M. Reinach has a genius for selection and coördination, and the work may be termed a masterpiece of condensation. While addressed to the amateur, the student will find his needs cared for.

The Strategy of Great Railroads

By FRANK H. SPEARMAN

With nine maps, $1.50 net. (Postage 14 cents.)

The story of the extraordinary struggles of the last five years for supremacy in control among American railroads and of the development and rebuilding of the transcontinental systems. A work of striking and dramatic interest.

CONTENTS

The Vanderbilt Lines
The Pennsylvania System
The Harriman Lines
The Hill Lines
The Fight for Pittsburg
The Gould Lines
The Rock Island System
The Atchison
The Big Granger Lines
I. The Chicago, Milwaukee and St. Paul
II. The Chicago and Northwestern
The Rebuilding of an American Railroad
The First Transcontinental Railroad
The Early Day in Railroading

Great Englishmen of the Sixteenth Century

By SIDNEY LEE. with 6 portraits. $1.75 net. (Postage 15c.)

CONTENTS

The Renaissance in England
Sir Thomas More
Sir Philip Sidney
Sir Walter Raleigh
Edmund Spenser
Francis Bacon
Shakespeare's Life
Shakespeare's Works

The Italian Poets Since Dante

By WILLIAM EVERETT. $1.50 net. (Postage 14 cts.)

Considers Petrarch, Ariosto, Alfieri, Tasso, Leopardi and others, not only leading figures, but lesser lights, such as Parini and Monti. A scholarly and popular consideration of a subject heretofore neglected in English, and calling loudly for treatment.

The Temper of the Seventeenth Century in English Literature

By BARRETT WENDELL, Professor of English at Harvard College.

8vo, $1.50 net. (Postage, 16 cents.)

The First Book on the War in the Far East

With Kuroki in Manchuria

By FREDERICK PALMER, with 24 illustrations from photographs, and new maps. $1.50 net. (Postage 14 cents.)

Gainsborough and His Place in English Art

By SIR WALTER ARMSTRONG. With 48 full-page illustrations in half-tone and 4 in photogravure. $3.50 net.

"If the 'Great American Novel' must not be of necessity a whole library of novels we should say that in THE UNDERCURRENT Judge Grant had come perilously near to writing it."—*N. Y. Times.*

NEW POEMS BY DR. VAN DYKE

Music and Other Poems

By HENRY VAN DYKE

"In whatever medium of expression he works Dr. van Dyke goes straight to the mark. Whatever he does bears the stamp of vigor of thought, clear-cut purpose, and deliberate and thorough workmanship. The facility he has acquired is 'the result of forgotten toil.'"
—Hamilton W. Mabie in the Century Magazine.

$1.00 net. (Postage 10 cents.)

"The Golden Bowl," by Henry James, is a thoroughly dramatic work, and its pathos constitutes an element of so much emphasis and relief as sharply to singularize the book among the author's productions.

HISTORY of ANDREW JACKSON

Pioneer, Patriot, Soldier, Politician, President

By AUGUSTUS C. BUELL

Author of "Paul Jones," now in its Eighth Edition

Two volumes. Illustrated, $4.00 net (expressage extra)

"The most casual reading of his work is sufficient to show what pains he took to sift all the evidence on disputed points, and to secure accuracy at every step. But no one is likely to rest content with a casual reading, for the quality which chiefly distinguishes the volumes is that of enthralling interest." *—Newark News.*

John Bunyan

The new Volume of "Literary Lives."

By W. HALE WHITE

Illustrated $1.00 net.

(Postage 10 cents.)

FETICHISM IN WEST AFRICA

Forty Years' Observation of Native Customs and Superstitions

By Rev. ROBERT HAMILL NASSAU M.D., S.T.D.

Illustrated, $2.50 net. (Postage 16 cents.)

"Every page he writes, from the modest preface outlining his missionary labors to the two long chapters of fetish tales at the end, is full of information and more exciting than any novel."—*N. Y. Sun.*

CHARLES SCRIBNER'S SONS, New York

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Chemical Synthesis of Vital Products and the Inter-Relations Between Organic Compounds

By RAPHAEL MELDOLA, F.R.S., V.P.C.S., F.I.C., etc., Professor of Chemistry in the City and Guilds of London Technical College, Finsbury, Member of the Faculty of Science, University of London, and of the Teachers' Registration Council. Volume I. Large 8vo. $6.00 *net.* Postage additional.

CONTENTS:—Hydrocarbons, Alcohols, and Phenols. Aldehydes Ketones, Carbohydrates, and Glucosides, Sulphur and Cyanogen Compounds, Camphor and Terpenes, Colouring-matters of the Flavone Group.

The Becquerel Rays and the Properties of Radio-Active Substances

By the Hon. R. J. STRUTT, Fellow of Trinity College, Cambridge. With 27 Illustrations. 8vo. $2.40 *net.* Postage additional.

*** While the author has not found it possible to avoid assuming some elementary scientific knowledge on the part of the reader, this has been reduced to the smallest limits, and probably a great part of the book will be intelligible without it. The author's object has been to give as clear and simple an account of the phenomena of radio-activity as the subject admits of without sacrificing accuracy.

An Introduction to the Theory of Optics

By ARTHUR SCHUSTER, Ph.D., D.Sc., F.R.S., Professor of Physics at the University of Manchester. With 180 Diagrams, and Figures in the Text. 8vo. $4.00.

The Electric Furnace

By HENRI MOISSAN, Membre de l'Institut, Professor of Chemistry at the Sorbonne. Translated by A. T. DE MOUILPIED, M.Sc., Ph.D., Assistant Lecturer in Chemistry at the University of Liverpool. With over 40 Illustrations 8vo. $2.75.

Laboratory Studies for Brewing Students:

A Systematic Course of Practical Work in the Scientific Principles Underlying the Processes of Malting and Brewing.

By ADRIAN J. BROWN, M.Sc., Director of the School of Brewing, and Professor of the Biology and Chemistry of Fermentation in the University of Birmingham, Examiner in Biological Chemistry to the Institute of Chemistry, etc. With 36 Illustrations. 8vo. $2.50.

Mechanics Applied to Engineering

By JOHN GOODMAN, Wh.Sch., M.I.C.E., M.I.M.E., Professor of Engineering in the University of Leeds. With 714 Illustrations and Numerous Examples. FOURTH AND ENLARGED EDITION. Crown, 8vo. $2.50.

English Estate Forestry

By A. C. FORBES. 8vo. With illustrations. $3.50 *net.* Postage additional.

Astronomical Discovery

By HERBERT HALL TURNER, D.Sc., F.R.S., Savilian Professor of Astronomy in the University of Oxford. 8vo. With Diagrams. $3.00, *net.* Postage additional.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

PUBLISHED THIS WEEK

The Vambéry Autobiography

The Story of My Struggles

The memoirs of Arminius Vambéry, C. V. O., Professor of Oriental Languages in the University of Budapest. With illustrations. 2 volumes, 8vo, cloth, $5.00 net.

IN this book Professor Vambéry, than whom no Hungarian is better known to the English-speaking world, gives a full and detailed account of his career. His life has been, indeed, an extraordinarily romantic one. Fatherless, lame, and almost penniless, he was compelled, when a mere child, to shift for himself, and up to the age of eighteen his life was a constant struggle against starvation. Yet by the time he had reached his twentieth year he had become one of the most accomplished linguists in Europe. Vambéry's most famous feat was his great journey through Central Asia. For this he adopted the dress of a Dervish, and travelled to Khiva with a herd of fanatics, who, had they discovered him, would have torn him to pieces. He visited Bokhara, Samarkand, and all the Oxus country in complete safety.

Few men have been so closely connected with leading men and women as has Vambéry. His personal friendship for the last three Sultans of Turkey and the last two Shahs of Persia is as much a matter of notoriety as the high respect in which he was held by the late Queen Victoria, a respect which is fully shared by her son, King Edward, who has conferred upon him the Victorian Order.

William Shakespeare His Family and Friends

By the Late CHARLES I. ELTON

With a Memoir of the Author by ANDREW LANG. 8vo, $4.00 net.

"He has treated Shakespeare from the antiquarian and legal point of view, with a wealth of erudition and illustration in his own particular field which can scarcely be paralleled elsewhere."—*N. Y. Evening Post.*

A History of South America, 1854-1904

By CHARLES EDMOND AKERS

With Maps, Portraits and other Illustrations. 8vo. $6.00 net.

"At last we have the pleasure of meeting an intelligent book on that blindest of all tangles, South America. . . . It will make the reader understand what is going on."—*N. Y. Sun.*

Elizabethan Sonnets

With an introduction by SIDNEY LEE. 2 vols., 8vo, $2.50 net.

These two volumes complete the set of the reissued "Arber's English Garner." Mr. Lee's research continues his investigation, of which the first results appeared in his "Life of Shakespeare." This is the first detailed examination of the foreign influences at work on Elizabethan literature.

Cambridge and Its Story

By CHARLES WILLIAM STUBBS, D.D., Dean of Ely

With 24 Lithographs and other Illustrations. By HERBERT RAILTON. 4to cloth, $8.00 net.

"With his whole soul the artist has responded to the appealing loveliness of ancient tower and oriel, of stately gateway and airy pinnacle, and the results are of the most satisfying nature. Dean Stubbs' recital is careful and scholarly."
—*N. Y. Tribune.*

Uniform with the above

Oxford and Its Story

By CECIL HEADLAM, M.A.

With 24 Tinted Lithographs and other Drawings by HERBERT RAILTON. Uniform with the Dean of Ely's "Cambridge." 4to, $8.00 net.

This beautiful volume is as valuable for the text as for Mr. Railton's beautiful illustrations, which are drawn on stone by the artist himself, giving the effect of an orginal drawing.

Studies in Prose and Verse

By ARTHUR SYMONS

With Portraits in Photogravure. 8vo. $2.50 net.

ESSAYS ON CONTEMPORARY WRITERS

By one of the ablest of the modern critics.

E. P. DUTTON & COMPANY, 31 West 23d St., New York

The Nation.

NEW YORK, THURSDAY, NOVEMBER 24, 1904.

The Week.

Secretary Shaw's call for $25,000,000 of Government funds deposited in the banks was expected, and is necessary. It is the readiest way of covering the current deficit in the Treasury. One can imagine, however, the sinister comments that would have been made had Judge Parker been elected and such a call followed so promptly. "There," people would have said, "you already see what havoc a Democratic Administration is going to work with the business of the country." And there would have been dire talk of an increasing Treasury shortage, shrinkage in commerce, and prospective panic. Such pessimistic words would not have been justified then any more than they are now; but it is remarkable that what, under Democratic auspices, would have excited grave concern, now passes without causing a ripple. At the same time, the problem of making both ends meet in national housekeeping remains the same; and this Treasury call is the first reaping of the harvest of unskilful Republican financiering during the past few years.

Nothing has been more astonishing than the number and variety of "vindications" given to political leaders at the last election. With Odell and Littauer vindicated in New York, and Grosvenor's book-operations approved in Ohio, we have had approvals of "stand-patters," tariff reformers, and men who stood for still higher duties. Congressman McCall, in the Eighth Congressional District of Massachusetts, has received, however, a remarkable vote of unmistakable confidence. Mr. McCall has been licensed for some time to run amuck among Republican doctrines precisely as he saw fit. His campaign review of the Republican party in the *Atlantic Monthly* read, as one newspaper remarked, like a most earnest plea for the success of Judge Parker in its advocacy of Philippine independence and tariff reform. Yet 21,551 of his constituents voted for him, while only 18,626 cast their ballots for Roosevelt. Recognizing the inevitable, the Democrats did not take the trouble to put up a candidate. The Socialists did, however, but their man received just 2,623 votes. If it is a rare occurrence that a Congressman should run ahead of the President's vote, Mr. McCall's success is all the more striking since many Democrats plainly took pleasure in aiding a representative of great ability and usefulness, who despises the party lash and is entirely indifferent to the wishes of the party boss in Massachusetts.

The official statement of election expenses filed by Mr. W. L. Douglas in Massachusetts shows that the successful candidate for Governor spent about $35,000 on his canvass. As he is elected for a term of one year at a salary of $8,000, the figure is somewhat startling. But it is most creditable to Mr. Douglas that he regards the spirit as well as the letter of the law for publicity of campaign expenditures. Rich men nominated for office have a perfect right, if they choose, to contribute liberally to the committees in charge of their campaigns. Yet, from fear of misconstruction or other motive, they often prefer to help out the campaign fund indirectly. An obliging brother or confidential friend may become a liberal contributor. It is very rarely indeed that a sum so large as that spent by Mr. Douglas appears in the official statement of a candidate's expenses. The returns of Govs. Morton and Flower in this State, for instance, showed that only very modest sums were contributed by those rich men to aid their canvass.

The old guard of Dingleyism, the Boston Home Market Club, may die, but it will never surrender. In its defence of the beleaguered citadel of protection it occupies a strategic position where the enemy's forces are already massed and walls have begun to crack. Such men as Sereno E. Payne and Nelson W. Aldrich publicly express the view that while the election was a magnificent victory for a stand-pat policy, the tariff may nevertheless be revised, and this is trying for the men who assert, in so many words, that the specific schedules of the present law are sacred. Only a stern sense of duty compels an organization professedly devoted to the upbuilding of Massachusetts industry to rebuke the president of the Boston Chamber of Commerce for advocating tariff revision. Yet the secretary's report interpreting the election results brought out some criticism of the Club for non-progressiveness. "I think," said ex-Congressman Walker, "that, instead of saying that no change in the protective tariff should be agitated, and that all changes should be resisted, we ought to take exactly the opposite position—namely, that if any one can point out any change that can be made in the protective tariff that will be of advantage to this country, we will gladly welcome it." That, of course, is sense—and therefore repugnant to the Home Market Club. But even if it should see fit to alter the tone of its public expressions, the real feeling of the ultra-protectionist will still be that of the man "open to conviction," but who expressed great curiosity to meet the logician who could convince him.

Less than a week after Pennsylvania had rolled up its unexampled Republican majority, good citizens in Philadelphia were preparing for an organized movement against election frauds. This is to be modelled after the efficient Voters' League of Chicago, but is to be independent of the old Philadelphia Municipal League. The two demands to be pressed upon the State Legislature are for a law requiring personal registration for voting, and one permitting the grand jury to investigate abuses without waiting for the initiative of a district attorney or court. As things now go in Pennsylvania, a Republican victory at the polls is just about as certain as a Democratic victory in Texas. It is an axiom everywhere else that when the election is purely a formality, the total vote falls off. Yet the Pennsylvania returns indicate on their face as much interest as most States display over a hard-fought election. The Philadelphia *Ledger* publishes some figures which help to explain. The six wards of the old city of Philadelphia, owing to the movement to the suburbs, had long been known to be decreasing in population. The census of 1890 gave them 104,154, that of 1900 showed 95,734 population. The vote, too, fell from 20,622 in 1890 to 19,666 in 1900. Yet this year it jumped to 27,828, an increase of 41 per cent. The census of 1900 indicated that there were only 33 475 males over twenty-one years old, including aliens, yet the registration of 1904 was 4 402 more than this, or 37,877. In the Seventh Ward there were 1,310 more names registered than there were men of voting age four years ago, and in the Tenth Ward 1 846 more. These things might be explained by blaming the census enumerators or assuming a return of residents of the suburbs; but the Philadelphians themselves have a simpler if less flattering explanation.

The tendency of city and country to divide on party lines appeared in the late election mainly in the almost complete submergence of rural Democrats in the Northern States. In the present Congress there are seventeen Democrats who represent constituencies in Northern States outside of the great cities. In the next Congress there will be only five such. The Legislature of New York shows almost exactly the same drift on a smaller scale. In the State Senate this winter there will not be a single Democrat from outside this city. In the Assembly there will be six Democrats from up the State, four of them

from counties containing large cities—Erie, Albany, and Rensselaer. Last year there were three Democratic Senators and nine Assemblymen elected outside this city.

Ex-Gov. Frank S. Black seems to be the storm centre of New York State politics. Mr. Depew wants to be reëlected to the United States Senate and Senator Platt is seconding the wish. Governor-Chairman Odell, though professing high regard for Mr. Depew's transcendent abilities, is disturbed by misgivings over Mr. Depew's "lack of assertiveness." Presumably, Mr. Odell would prefer as Senator a man who exhibits this divine quality, with which, it may be added, he himself is so richly endowed. Should he hesitate about taking the place for which he is thus eminently fitted, he would very naturally turn to Mr. Black. The latter has been accused of lacking various things, including a delicate moral sense; but assertiveness is not in the catalogue of his deficiencies. For this and other cogent reasons Gov. Odell is supposed to favor the movement for Black. Some genius in the gentle art of reconciling irreconcilables suggests that President Roosevelt remove the cause of difference between Odell and Platt by taking Black into the Cabinet as Attorney-General. This would be a happy way out, but for the possibility that both Roosevelt and Black may object to the plan. Then, too, the withdrawal of Black from the contest would simply be dipping a drop from the ocean of pretexts for a quarrel that rolls between Platt and Odell. The root of the trouble is not Frank S. Black, but the fact that both Odell and Platt want to run the Republican machine in this State, and only one can do so. It is the old problem of two bodies occupying the same space at the same time.

Every day brings out a new touch of *bouffe* in the Panama Republic. A year ago we were recognizing it and lauding it, and promising to protect this new "sister among the nations." To-day, it appears mainly as a joke among the nations. The larger part of the army has "resigned," and the police are vigilantly guarding the remnant. The latter is very much in the position of the Irish patriots who would have risen and swept the English tyrants into the sea, but for the fact that the police wouldn't let them. It is now clear that the Panama revolutionists of 1903 could not, we will not say maintain themselves against Colombia in 1904, but could not be prevented from flying at each other's throats were not our military forces on the spot to make them behave. The truth is, that we have christened a lot of chronic conspirators and betrayers of conspiracy a "republic," and must now take the consequences. The ridiculous antics of the men whom we were but a few months ago acclaiming as heroes and patriots, are indeed a laughing matter; but the laugh is distinctly at our expense.

No one of England's unofficial ambassadors to this country has come with better credentials than John Morley; and the warmth of his reception at the dinner of the Chamber of Commerce last week was characteristic of the welcome he has received everywhere among us. He stands peculiarly as the inheritor and upholder of that great Liberal tradition—the tradition of Cobden, and Mill, and Bright—which has closest knit the aspirations of the United States with those of his own country. In his speech, Mr. Morley ingeniously threw himself on the mercy of his audience as a hardened free-trader, obstinately unconverted even by the common argument of bidding foreigners just look upon this great Babylon which protection has builded. Moreover, he had the audacity to say, right on the heels of an election which was supposed to prove that all we are and have and hope for depends upon a protective tariff, that we should have been just as great and strong without it. And this heresy was cheered to the echo by the representatives of American commerce! In the deep note which he struck when on the theme of Anglo-American relations, Mr. Morley passed instantly beyond the cheap talk, common to such occasions, about the two fleets side by side and a united front to the common foe, and spoke in a high strain of the union of the two nations in the diplomatic pursuit of the noble end of spreading freedom and peace and a humaner spirit wherever our influence may carry them.

The monstrous battleship of to-day had a hard time of it between the attacks of Mr. George W. Dickie, the manager of the Union Iron Works of San Francisco, and Mr. Anson Phelps Stokes, at Thursday's meeting of the Society of Naval Architects and Marine Engineers. The former spoke his mind very freely, describing the eight-million-dollar battleships as "complicated combinations of compromises so involved in structure and function as to be quite incomprehensible even to the experts themselves." To keep these leviathans of the deep in good condition is a task, Mr. Dickie thinks, "beyond the ability of the officers and men in charge of this modern puzzle." There was, of course, prompt objection to this view, but the essential facts upon which Mr. Dickie based his statements are unchallenged. The battleship is crammed full of the most elaborate mechanical devices, not merely for offensive purposes, but in order to make life on board a possibility. There are thousands of intricate devices, and the auxiliary machines run into the hundreds. And, as Mr. Stokes pointed out, contact with a mine in one portion of the vessel, if not directly fatal, is likely to produce a dangerous change of trim by flooding a single compartment. The length and shape of these ships make them dangerous to their friends, and their heaviest guns do not permit of their getting near enough for effective work if a harbor is protected, as is Port Arthur, by mine fields and strong fortifications. It will be a subject for thankfulness if, as these speakers predict, the modern battleship give way to cheaper and simpler vessels, or to floating batteries when it comes to coast defence.

At the end of last week the Japanese mined and blew up Sungshu Hill fort, in the centre of the main perimeter of Port Arthur's defence, and one of the Urlung forts near the eastern end of the semi-circle. Whether these positions were occupied or not, the dispatches do not state; in any case, the breach has been made, and the capture of these points commanding the other fortifications from behind is now only a question of the number of lives Gen. Nogi is willing to sacrifice. Suggestive in this connection is the report that a thousand fresh troops a day are landing at Dalny. Everything points to an assault in the next few days, for the pressure of the Baltic fleet, though still several weeks away, is already felt at the seat of war. While the news from the besieged city is scattered and indefinite, it appears that Stoessel has had a crippling blow in the loss of his powder reserve. His guns also are reduced by a quarter in number, if the report of a correspondent who saw more than a hundred captured, at Dalny, may be credited.

The sailing of Admiral Rozhestvensky's ships from Dakar, Cape Verde, and the news that the second division of seven cruisers and five destroyers which sailed from Libau on November 16 is to go through the Suez Canal, reveal the plans of the fleet pretty clearly. This second division, which is composed of faster vessels than the first, is evidently to meet the more ponderous first division in the Indian Ocean, perhaps near Ceylon, and the combined armada will then proceed towards Port Arthur. Despite the delay, owing to the North Sea incident, Rozhestvensky's ships have made fair progress. If, as has been reported, they will coal so far as possible only in French settlements, their next port should be the rocky harbor of Loango, in the French Congo country. Should their coal capacity permit so long a run, their next port should be Madagascar, at which island colliers are known to have been waiting for some time. If unable to keep the sea for this distance, their only refuge

will be an English harbor with a very frigid welcome. It is not surprising that a state council has already been held at Tokio, with the Mikado presiding, to determine the best way of opposing the Russians. Off Formosa would be the natural meeting-ground, if the Japanese fleet is foot-loose by that time; if not, it would have to await an attack in its home waters. Obviously the Japanese longing to hear of Port Arthur's fall will wax in intensity from day to day as the Baltic flotilla approaches.

Russia's refusal to join in the proposed Hague Conference is precisely what was expected. Neither the Czar nor the Mikado, in all probability, would be represented if the Congress were to be held at once. Hence the assembling of the delegates is likely to be deferred for some time to come—until the close of the war. This fact is another strong argument for ending the fruitless hostilities in Mantchuria as soon as possible. The situation there grows worse and worse, it even being admitted in the dispatches that were an attack of one side or the other to succeed, it would have no other result than to expel the defeated force from the miserable holes in which they seek protection from the cold and the enemy's cannonade. It bids fair, indeed, to parallel in some respects the winter in the Crimea, which was so fatal for the allied forces. Meanwhile, the desire of the other nations to take further steps in the direction of international comity is indefinitely balked. For consolation it is well to note that hardly a week passes without the signing of a new arbitration treaty. Even Switzerland is to have such agreements with all the leading nations and join in the latest and best international "fashion."

Prince Mirsky has conjured a greater spirit than he imagined. The delegates of the popular local assemblies have declined to restrict their debate to matters of minor policy; these representatives of the Russian people have begged protection against a tyrannical bureaucracy, and against imprisonment by extra-legal process, demanding freedom of speech and of the press, extension of suffrage for the zemstvos, confirmation of their original powers, and, finally, a national legislative body. In other words, they ask to-day what Alexander II. was about to give them freely when an assassin cut short his reign. The challenge to the bureaucracy personified in the fanatical Minister Plehve could not be more complete. No wonder, then, that Prince Mirsky lost courage, and that the presidents of the zemstvos, who had been officially invited to the City Hall, were smuggled off to private quarters, their deliberations characterized as private, and kept out of the newspapers. But as such an assemblage is well-nigh unprecedented in all the history of the Empire, its programme, once published, becomes a bill of rights, and its voice that of a States-General. And history will record this of the zemstvos presidents, whatever the immediate fortune of their plan.

The Prussian Government's latest plan for a Rhine-Hanover canal and for the canalization of the Lippe River has passed the first reading in the canal committee of the Prussian House of Representatives, and may thus be looked upon as certain of adoption, after a hard fight lasting several years. A compromise was arrived at as soon as the Government promised the Centre and certain members of the Conservative party that it would make a Government monopoly of the canal-towing business. This proposal had the warm support of the Agrarians and the National Liberals, as well as of the Conservatives, and is thus another step towards the national ownership of industries. The defeat of the Government's attempt to secure the Hibernia coal mine has in no way checked this strong tendency in Prussia. That so conservative and centralized a Government should actually lead the way in the direction so earnestly advocated by Socialists and Communists, is remarkable. Why should not the next move be ownership of all shipyards, on the ground that they are necessary to a proper system of national defence? There seems to be no good reason why this and other steps should not be taken if it is the Government's duty to purchase the improvement of its waterways by such means or to fight the Trusts by creating *cartels* of its own.

General André's resignation of the office of Minister of War was inevitable. It had been fully shown that he conducted against his own officers a threefold espionage, filing in the War Office reports from the Masonic Lodges, from tale-bearing subalterns, and from anonymous accusers, and treating all these rumors as cause for retarding the promotion of officers in any way connected with the Church. General André has defended this system: by these covert methods he found it necessary to oppose a clerical conspiracy. Yet of this assertion not the slightest proof has been produced. To realize the enormity of the system, one has only to remember that the blacklisted officers were, in most cases, proscribed simply for allowing their wives and children to attend the Roman Catholic Church. From these army revelations may be inferred whither M. Combes's anti-clericalism really tends. In the name of liberty, the devout are to be attacked as such. Already one hears from General André's lips the sinister phrase that his army is full of "enemies of the republic." A little common sense would shatter that bogey of conspiracy, but, in the present anti-clerical fervor, the lesson of General André's dismissal may be lost.

With the student riots at Innsbruck, the Italian-German dispute assumes a more serious aspect, and the experiment of establishing an Italian faculty in a wholly German town is thoroughly discredited. Three years ago the attempt was made to give law lectures in Italian at Innsbruck. It failed, because of the threatening attitude of the German students, and the Government weakly discontinued the courses. Various proposals were made to set up the Italian university in provinces largely peopled by Latins, as the Trentino or Istria. Indeed, Trent and Trieste are cities in either of which such an institution would have been welcomed. But the Austrian Government let itself be deterred by the dread of Irredentism, and last October, finding that more than a hundred Italian students at the Innsbruck law school must be provided for, it resumed the Italian lectures without warning of any kind. The natural result was that the Italian students were attacked at their first *Kommers* by their German associates, defended themselves with revolvers, and finally were roughly handled by the police under the Pan-German burgomaster, Herr Greil. The whole incident illustrates the vacillation and hesitation of Austria towards her ally. It would have been hard to make a worse mess than this race-rioting provoked by what was intended as a conciliatory measure. It seems time for the Austrian Government to transfer the school to an Italian-speaking community. Such a settlement would be made easier by the praiseworthy moderation of the Italian press.

The abortive mutinies at Verona and Genoa prove how serious the propaganda of the extreme Socialists has become. Just as our own unionists have striven to cripple the militia, the Italian "reds" find their most formidable enemy in the army. No one can deny that their sentiment is well founded. The army is their foe, not only because troops under arms have repressed Socialistic riots, but also by reason of the existence of an invisible army of reservists, who are subject to call to the colors. Nearly two years ago the Government thwarted the great railroad strike by mobilizing that class of the reserve, and, after the recent general strike in Northern Italy, Giolitti's reprimand took the form of a call to the reservists of the disorderly territory. Naturally, the Socialists would be glad to nullify so ready a means of repression. Their failure on Friday, in what was apparently to have been a general military strike, is reassuring to friends of Italy, though the attempt itself is ominous of difficulties to the present Government.

TARIFF REVISION.

Tariff reform is thundering all around the Republican horizon. Even the *Tribune*—which it is a pleasure to find again clothed and in its right mind—is in favor of "readjustment" of the Dingley tariff; "and the quicker it comes with the least political debate the better." It declares that the latest tariff act was "faulty from the beginning"; that "the iron and steel schedules have certainly been outgrown and need revision"; that there was a strange "miscalculation" about the leather duties, which were "intended to protect cattle-raisers," but have simply hampered our export trade and made leather goods "unnecessarily dear at home." We must be excused for rubbing our eyes as we read. Yet all this is only a strict fulfilment of the prophecy made by John Sharp Williams last winter, that if the Democrats did not take up and push the tariff-reform issue, the Republicans would.

Ex-Gov. Washburn of Minnesota asserts that "nine-tenths of the thinking Republicans in this country, particularly in the Western portion of it, demand a business-like and just revision of the present tariff schedules. . . . The party cannot stand sponsor for the creation of gigantic Trusts or the building up of great home monopolies." This is the kind of sentiment which President Roosevelt's "feelers" are encountering or evoking almost everywhere. Republican Senators and Representatives who visit the White House in these halcyon post-election days, congratulate the President on his smashing defeat of the Democratic party, only to find him bent on carrying out one of the leading Democratic principles—reduction of the tariff. When even Senator Aldrich admits that tariff revision is not impossible, we may infer with all certainty that Mr. Roosevelt regards it as not only possible, but highly desirable.

We are told, however, with fine scorn, that the thing is wildly chimerical. Indignant letters reach us: "Don't you *know* that the Republican party is as incapable of revising the tariff as a manacled prisoner is of escaping from a platoon of police." Our answer is, That depends. It all turns on the question of wise handling—more narrowly, on the question of wise naming. In politics, everything is in a name. We have a fine illustration from a contemporary political movement in England. The Conservative party, after having shuddered at Irish Home Rule and fought it as next door to treason, is preparing to accede to it in principle, and to grant a large measure of it in practice. But the gross mistake is not made of calling it Home Rule. No; the Conservative augurs look gravely at each other, and say, without a wink, that what they are aiming at in Ireland is a "devolution of imperial powers." Convey the wise it call. And, similarly, it is quite possible that the Republican party may knock out the keystone of the protective arch and call it "strengthening the principle of protection."

Senator Cullom does not appear to be quite awake to what is going on. Some recent remarks of his imply that he is not aware that the election is over. His words read like a warmed-up hash of one of his campaign speeches. He starts and shies like a skittish old horse at the thought of a Republican Congress revising the tariff. It might "endanger the established prosperity of the country." It might cause "widespread nervousness." In short, the Illinois Senator recoils in theatric horror at the thought of any "sweeping cut in the tariff," just as if he were still witching audiences from the stump. But the process will not be at all what he imagines it. Properly presented, the matter would be only one proof more of the high governmental capacity of the Republican party. The Democrats had fumbled and blundered at the tariff knot, and now the Republicans would show them how to unloose it familiar as their garter. Party pride would thus be enlisted; and thereafter a careful selection of names to make tariff reduction smell sweet would help all to go smoothly. Slicing off the steel duties could be called making protection "more symmetrical." Abolishing the duties on coal and iron ore and hides could be declared "intensified protection," or "enlarging the sphere of the giant manufactures which are the sole creation of the tariff." Lowering the rates on textiles could be described as "the great compensating law of protection," while making books and works of art free might be pictured as a sagacious "broadening" of the definitely established principle of the high tariff. And as for the people being made nervous, or business thrown into qualms, by any project of Republican tariff revision, that could all be met by quietly assuming that nothing Republicans may do can possibly disturb anybody—unless it be Democrats who see their issue coolly appropriated.

A conservative party is, historically, the one to do radical things. The radical party talks about them, frightens the country by its violence of language, entrenches its opponents in power; and then the latter proceed to dish the Whigs by stealing their clothes. This is one way in which political progress is made. The Opposition cannot win office, but forces its ideas upon those who can. The Government is in office, very often, while it is the Opposition that is truly in power. This may be thought hard, politically, upon the radical party. It would doubtless prefer "the fruitful task of administration to the spent candor of criticism." But it may find consolation in the reflection that, after all, it is ideas alone which count and live in politics; and that to have got a political idea made militant and put in practice is the great thing, no matter what the party or the personal instrument in the work may happen to be.

It will be awkward for Mr. Chamberlain if the Republican party, under the President's lead, actually puts through a measure of tariff reform in this country. In England, "tariff reform" means just the opposite of what it does with us. There the reform contemplated is a higher tariff; and in urging the establishment of protective duties, Mr. Chamberlain has continually harped on the example of the United States. It is not merely that he accepts all the tales about protection having made our soil rich and our laborers skilful; he has continually pointed to our high tariff as a menace to England. To strike back at us has been one of his professed aims. So, too, Premier Balfour has defended his own policy of retaliation as one that the protective system in America has forced upon him—so far has he wandered from the maxim of Sir Robert Peel, that the way to meet our protective tariffs is by making your own trade still more free. But if English statesmen now perceive that the business sense of the United States is insisting upon reforming our tariff down (since we cannot take Hamlet's advice and reform it altogether), they will be less disposed to set about reforming their tariff up. That would be a good thing for them and for us.

THE VOICE OF DISCONTENT.

The Socialist vote in the national election was large enough to excite general comment. The exact figures cannot yet be given, but the estimates put the total at 600,000 in round numbers. This is about six times the vote of four years ago. The rapid growth of the party is shown by a table prepared by Jack London, himself a Socialist, who speaks, so far as any one can, with authority:

1888	2,068
1892	21,512
1894	30,120
1895	34,869
1896	36,275
1897	55,550
1898	82,204
1900	98,424
1902	225,903
1904 (estimated)	600,000

This last figure, impressive in itself, is doubly significant when it is compared with what precedes.

Where did these votes come from? For a detailed analysis this is neither the time nor place. The results in a few States, however, are worth considering more fully. California gave the Socialists 7,572 in 1900, and 35,000 in 1904; Iowa, 2,778 in 1900, 6,421 in 1903, and 11,236 in 1904; Illinois, 10,350 in 1900, and 150,000 in 1904; New York, 25,491 and 48,000; Rhode Island, 1,423

and 1,909; Massachusetts, 10,510 in 1900, 29,812 in 1903, and 15,494 in 1904. In explanation of these figures it should be said that the totals for 1900 and 1903 generally lump the vote divided between the two small socialistic parties, and those for this year are estimates. The statements are accurate enough to afford a basis for some general observations.

The first is that in Massachusetts and Rhode Island, where the Socialist vote has been jealously watched for several years by the other parties, and where the Socialists have been openly spoken of as the gravest menace to the old alignment, the movement shows singular weakness: only a slight gain in Rhode Island and a heavy loss in Massachusetts. Many people had expected that these large manufacturing communities would remain the strongholds of Socialism; but, through their candidates for Governor, the Democrats made a successful assault upon the so-called labor vote, from which the New England Socialists draw their main support. Gov. Garvin has always had the labor vote of Rhode Island, and he had it this year, for, though he was defeated by a plurality of a few hundred, he ran thousands ahead of his ticket. Mr. Douglas also attracted the labor vote. Ever since the election the Massachusetts papers have been trying to explain why; and, moreover, why these same wage-earners also voted for Roosevelt. The mixed motives that sway large masses can never be satisfactorily analyzed. Yet this much is true: Mr. Douglas is a large employer, popular with his men; Gov. Bates had offended the wage-earners by one or two vetoes; and President Roosevelt exercises the same potent influence in New England as in the rest of the country. When Douglas and Garvin broke up the straight Socialistic ticket, the remaining fragments were swept into the Republican whirlpool.

Notwithstanding losses in New England, the Socialists are justified in venting their exultation; for the first time they have succeeded in making a perceptible impression upon the American electorate. Their spokesmen now recall a remark attributed to the late Senator Hanna, "The next great issue this country will have to meet will be Socialism"; and they assert that this issue is now confronting us. They recite the history of the development of the Republican party from the Free Soil party, and prophesy like successes for their cause. Prediction is a hazardous business. The Socialists may be right; but, again, they may be snuffed out like the Populists, who a decade ago seemed even more formidable, but who succeeded only in teaching the country that it is easier to be weary of the Government we have than to mend ourselves by a change. We venture to doubt whether the Socialists ever secure a majority for their present rather nebulous programme.

Nebulous, we say; for though many Socialists are out for definite things, such as Government ownership of all public utilities—say, railways, lighting plants, and waterworks—the party is as yet a confused babel of voices, in which the most strident note is the cry of the discontented. There is the mild Socialist, who would begin with the railways and telegraphs, and thus slowly and peacefully pass from victory to victory, till he ushers in a millennium in which the capitalistic lion and the oppressed lamb lie down together. There is the extremist, who scorns compromising and temporizing; with the watchword, "Death to capital!" he would offer no quarter, but would go to the limit, and go at once. His banner, he shouts to us, "is blood red [symbolizing the blood of man], and it preaches the passionate gospel of the brotherhood of man." The plan "is to confiscate, with or without remuneration, all the possessions of the capitalist class which are used in the production and distribution of the necessaries and luxuries of life"—that is, practically everything. As to ways and means he is somewhat hazy.

He does not grapple with the question much more definitely than that valiant Republican, William Allen White of Kansas. Mr. White, on the morning after election, assured us that "the problems facing Theodore Roosevelt are the problems concerning the distribution of wealth." Mr. White is convinced that the poor man does not get his share of the good things, while "the promoter, the capitalist, and the captain of industry reap rich rewards." Mr. White presses upon "Theodore Roosevelt, the man for the hour," the following brief sketch of a reform movement:

> "Laws to regulate and control Trusts; laws to regulate and control railroad rates and service; laws to regulate and control public utilities—street railroads, telephones, public heating plants, telegraph companies, water companies, lighting companies, and all corporations which serve the people with necessaries and comforts of life."

Mr. White also assures us that "laws to regulate and control the man who unbridles his greed behind corporate organization to oppress the people or to swindle them, must be made in the next generation if the country is to maintain its integrity as a liberty-cherishing people." With all this accomplished, many moderate Socialists would rest fairly satisfied. If the Western Republicans can carry with them in such a crusade the capitalists of the Eastern wing of the party, they will cut the ground from under the feet of the Socialists. Furthermore, a Democratic alliance which may also modify the demands of the extremists is within the range of possibility. But a forecast is futile; for these things lie in the lap of the gods.

BURDENS OF A BOSS.

As the young American passes through the several stages of boyhood, his ambitions expand. The lad of five thinks that to be a policeman is the height of earthly glory; at eight he prefers the career of a bareback circus-rider; at ten, that of a soldier; and at fifteen, that of the President of the United States. But when he becomes a voter and begins to comprehend the richness and fulness of the perfect life, he aspires to be a political boss. Far be it from us to discourage these lofty aims: our purpose is merely to point out that, in present conditions, the boss does not find it all beer and skittles. Hercules had many things to keep him busy. Atlas is the commonly accepted type of a man with his hands full. St. Paul, after referring to his journeyings and perils, his weariness, pain, and watching, complained to the Corinthians that he had also "the care of all the churches." But, as those who read the remarks of Gov. Odell reported in Thursday's morning papers must admit, your modern political boss may without boasting assert that he has laid upon him at once the labors of Hercules, the burden of Atlas, and the cares of St. Paul.

To enumerate the duties of a boss in the brief space of a single issue of this journal would be impossible; we mention merely a few of the more conspicuous. First, he must teach all his subordinates, from the President of the United States down to the humblest ward-worker, to know their places. The workers are comparatively easy to handle. Like the dog, they lick the hand that feeds them, whether it strikes or not. A few crumbs at reasonable intervals, accompanied by appropriate kicks and cuffs, will keep the rank and file of minor henchmen quiet as kittens and bursting with gratitude. Ordinary legislators and Congressmen are also fairly manageable. Like the horse, they demand more kindness than the dog, and they occasionally kick over the traces. But if they are kept well fed and held with a firm hand, they make little or no trouble. For years Senator Platt drove the New York Congressmen, the State Senators, and the Assemblymen exactly as he pleased; single or double harness, tandem, hitched to racing sulkies, broughams, drays, ploughs, or garbage carts—they never balked. The secret of his success was plenty of oats. Gov. Odell, we regret to note, though firmer than Platt, frequently mixes sawdust with the bran.

Governors and Presidents offer a difficult problem. They often get puffed up with notions of their own importance; are, in short, swayed by delusions of greatness. They talk so much about their duties to the people that they begin actually to imagine they are no longer responsible to the boss. They like to

pose as independent executives; they develop a canine appetite for popularity that makes them hesitate to perform the simple and obvious duty of licking a boss's boots in public. Platt found Roosevelt as Governor too often intractable, and to render him harmless forced him into the Vice-Presidency. Odell was worse yet, for he choked the old boss black in the face and seized the place and perquisites for himself. He is now experiencing the vicissitudes of fortune, for he has had to listen with a forced smile while Higgins declares himself "no man's man," and he is making little or no headway with the President. A few days ago he tried to take down the President's pride by telling reporters that the result in this State was not wholly due to Roosevelt's popularity, but the effort was such a ghastly failure that Odell is now visibly perturbed.

Besides treading his subordinates under foot, the boss must fill a thousand offices, and win the undying hatred of the ten thousand hungry seekers who are crowded out. Throwing such chicken-feed as clerkships to the small fry becomes a daily pastime, but the election of a United States Senator demands time and skill. Generally, you cannot settle the matter between courses at luncheon. Gov. Odell fully realizes the magnitude of the task, and he approaches it with proper humility. He does not commit himself to Black, and he will not speak harshly of poor old Depew, for whom he evidently feels sincere pity. He has, however, said frankly to Senator Platt, "The matter must be left in my hands to be worked out." "Work" is the very word. Some men have time for meals; a few multi-millionaires and manual laborers can afford an eight hour day; but the toils of a boss are never ended. When Sunday comes round, and J. P. Morgan and Edward W. Bok can rest with a light heart and an easy conscience, the jaded boss must turn out of bed bright and early for Sunday-school at the Fifth Avenue Hotel. Well may he envy the galley-slave his ease and freedom.

Worse than all, the boss must rule single-handed; he can "bear, like the Turk, no brother near the throne." Brother Odell near the throne was the undoing of Thomas C. Platt; and that experience has not been forgotten, for even the blessed "Tapewormers," Littauer and Ward, are not allowed within ten feet of the dais. The Kaiser knows that all his steps are divinely guided. The President has Cabinet advisers, and he is checked by the legislative and the judicial departments. A Governor's power is also bounded by law and precedent. But the boss is an absolute sovereign. He is responsible to no one but himself in the heavens above or the earth beneath or the waters under the earth. His rights transcend those of legislature, court, and executive, which are the mere instruments of his pleasure.

This is a hard ordeal for a man of delicate conscience. He is bound by an unwritten but inflexible code to secure all the plunder he can for the machine and for himself. And yet if he takes everything in sight, the voters, who are singularly stupid about mastering the rules of the game, are likely to turn his heelers out of office. The dilemma is painful. If he complies with the exacting demands of boss honor and lives up to his rights, he suffers at the polls; if he makes a show of dividing even with the people, he might as well not be boss. Pleasant enough it is to be able to say with Governor-Chairman Odell: "In my opinion a majority of the Legislature of New York will do what I may advise in party matters"; but what shall the advice be? Is it safe to carry away everything that is not nailed down? How soon will an affront to public sentiment be forgotten? How bad a man is it possible to nominate and still win? How far must one go in pandering to the decent element? These are the perplexing questions that a boss must answer, and answer alone, conscious that, if he guesses wrong, the jackals are waiting to glut themselves on his wretched carcass.

MUNICIPAL EXTRAVAGANCE IN ENGLAND.

While Englishmen are pondering the formidable increase of national expenditure, they receive, from time to time, uncomfortable reminders that the cost of local government is advancing at a portentous rate. The latest shock is administered by Mr. R. J. Thompson, who has made for the Royal Statistical Society a very comprehensive study of local finance in England and Wales. The results of his investigation may well give food for serious reflection; they demonstrate, indeed, that there are certain "parochial" questions which demand the attention even of men who are "imperially minded" and scorn the affairs of little England. They also suggest to the American reader the unpleasant query whether a similar study of conditions in this country would not disclose a state of affairs too much akin to that in Great Britain.

The chaotic condition of English local government a generation ago made it impossible to collect complete data concerning financial affairs, and to-day comprehensive returns are available only for the seventeen years extending from 1885 to 1902. During this period the aggregate local expenditures defrayed out of other revenues than loans increased from £44,054,000 to £87,377,000, or about 98 per cent.; while the outstanding debt of the local governments advanced from £173,208,000 to £343,417,000, the percentage of increase again standing at 98. Meanwhile the population of England and Wales has advanced not more than 20 per cent., so that both the ordinary expenditures of the local governments and their outstanding debts have increased about five times as fast as population. If Commissioner Wright and some other American statisticians could only have been set to work upon the problem, they would have proved, doubtless, that, although expenditures had outrun population, the wealth of England and Wales had advanced even more rapidly; and would have shown that the figures indicated nothing more than that John Bull had been living up to his larger income. Unfortunately, however, "prosperity statistics" are an undeveloped art in England, so that our unsophisticated cousins know perfectly well that their wealth has not kept pace with the growth of local outlay. Therefore, deprived of that consolation, they are unable to contemplate the situation with unmixed satisfaction.

At this point our friends, the champions of municipal ownership, will ask, Is it not true that the increased outlay has been due to the growth of municipal trading; and is it not counterbalanced, therefore, by the revenue derived from waterworks, gas plants, and tramways? Undoubtedly, some allowance must be made for this factor; but when this is done the result is not materially affected. Exclusive of "reproductive undertakings," so dear to the heart of the Fabians, local expenditures have risen from £38,924,000 in 1885 to £74,045,000 in 1902, or something more than 90 per cent.; so that, with municipal trading left out of the account, the outlay has increased four and one-half times as fast as population. And in the case of local indebtedness the situation is the same; debts contracted for other purposes have increased quite as rapidly as those incurred for municipal trading. Therefore, examine the figures as you will, a startling growth of expenditures is too clear to be mistaken.

When we inquire how the bills have been paid, the results are of equal interest. Of the total outlay for the seventeen years, no less than £170,209,000, representing the increase of local indebtedness, has been left for future generations to settle; and of this, less than one-half is represented by investments in municipal industries. Then, of the £43,323,000 of additional annual outlay, not defrayed by loans, only £13,648,000 is covered by increased receipts from "reproductive enterprises" and miscellaneous incomes; leaving £29,675,000 to be met by heavier taxation. In 1902 the imperial exchequer was charged with £8,900,000 of this additional weight of taxes, and local rates had to bear the remaining £20,680,000. From 1885 to 1902, grants from the Imperial treasury increased 240 per cent.,

while local rates advanced 80 per cent.; so that neither the national nor the local taxpayer has escaped the growing pressure caused by heavier expenditures.

The situation is made worse by the further fact that the increase of local debt and expenditure was more rapid in the later years under examination than in the earlier. From 1885 to 1890 ordinary expenditures advanced 9 per cent., and local indebtedness by 15 per cent.; from 1890 to 1895 expenditures increased 24 per cent. and indebtedness 18 per cent.; while from 1895 to 1900 the figures were, respectively, 27 and 25 per cent. And from 1900 to 1902 the returns indicate no tendency toward a slackening of the pace, so that the increase is not only continuous, but progressive. It is, moreover, confined to no one or two classes of local outlay, but is common to all. Some satisfaction may be found in the facts that expenditures for poor relief showed the smallest rate of increase between 1885 and 1902, and that the greatest advance was in the outlay for education; yet the first item can boast of an increase of 50 per cent., so that there is no reason for excessive enthusiasm even here.

The rise of local expenditures has been rapid, progressive, all-pervasive, and it is time for the subject to receive careful attention both within and without Parliament. It may be highly important to tax the laborer's bread, or to place a protective duty upon screws and other products of Birmingham industries, while the eternal salvation of South Africa may depend upon the introduction of coolie labor. But it is desirable also to pay some heed to those little-Englanders who have to bear the pressure of local rates; and some consideration should be given to coming generations that are to inherit the consequences of present-day extravagance. Some increase of local expenditures was, doubtless, inevitable, and for much of the money that has been spent both the present and the coming generation will have something to show. But the outlay cannot continue to grow five times as fast as population without producing the most serious results; and, through action of Parliament or in some other way, the local authorities must be taught to aim at the golden mean between parsimony and extravagance.

THE ITALIAN DIALECTS.

ALASSIO, October 15, 1904.

The Italian language, for all its accredited position as the language of the nation, has never been able to supersede the dialects. The traveller in Italy must be a long time in the country before he appreciates how firmly established these dialects are in the common usage. Everybody with whom he has to do speaks to him the best Italian at his command; he does not at once perceive that when his interlocutor—be he coachman, waiter, innkeeper, shopman, lawyer, or even professor or man of the world—turns to those of his own kith and kin, he talks in quite a different language, probably incomprehensible to the foreigner. There are indeed cities, like Bologna, where the language of the street is not admitted into the *salotto;* but, outside of these and that favored region in the centre of Italy where the common speech excites the admiration and the envy of men born in less fortunate regions, those who among their intimates speak Italian are exceptions—I cannot say to what extent they are rare. What is more, many cities have one or two newspapers—generally satirical and often very clever—wherein the local sentiments find expression in the popular tongue. The dialect theatres are sometimes of a high order; who that ever saw him can forget the inimitable Ferravilla of Milan, or who that has heard "Le Disgrassie de Monsü Travett" will deny that some of the best comedies of the modern répertoire are written in Piedmontese? And the Venetian plays of Goldoni, if not those of more recent writers, are famous throughout the world. But there is also noble dialect poetry, though I doubt if its fame outside of Italy is equal to its deserts. How many Americans know even by name the Milanese Carlo Porta, or the Roman sonneteer G. G. Belli, notwithstanding that he has been celebrated in these very columns, or the Tuscan sonnets of the author of the "Veglie di Neri"? It is only the student of the *Risorgimento* who has heard of the patriotic songs of the Turinese Brofferio, and of the part they played in the awakening of the modern Italy; and even among those who love the by-ways of XVIIIth-century letters there can be but few who have felt the charm of the anacreontic and pastoral poetry of the Palermitan Giovanni Meli, "so ingenuous and suave that there is perhaps nothing to equal it in the literature of the nation."

These writers mostly belong to times when they were Venetian, Roman, Lombard, or Sicilian first, and Italian only in a lesser degree. To-day, when the national feeling overtops that of the region, dialect literature is but a wider expression of the family feeling, and as such it is as flourishing as ever, or rather seems everywhere on the increase, and reveals that enduring attachment to the scenes, the habits, the tongue in which he was brought up, which is so beautiful a trait in the character of the Italian. It was but this morning that I was reading a comedy of Fogazzaro, written in the variety of the Venetian dialect that is spoken at Vicenza. And along with the play of Fogazzaro, there lies before me an example of a kindred variety in the 'Canzoniere Veronese' of Berto Barbarani, whose gentle muse charms by simplicity, tenderness, and melody. Both poems and comedy are samples of the dialects of the Venetian country *(il Veneto)* without being Venetian *(Veneziano)*. The dialects are more flexible and multiform than the national speech, which is itself, in the matter of fixity of form, at the opposite pole from the French. The dialect has been less dominated by its literature, has been beneath the attention of academies, and so, left to the processes of nature, has remained as fluid as the air that enters into every cranny and envelops and adapts itself to the myriad accidents of the earth's surface. Thus it is that, in the little community where I live, an Alassian can, blindfolded, tell from the speech alone whether persons brought to him belong to the east or the west end, or to the centre, of the town—to La Costa, that is, to Borgo Barusso, or to the Piazza.

It needs, however, one who is native and to the manner born to recognize the variations obtaining between places even more widely separated. No stranger, not even an Italian, I believe, could distinguish by the speech a Mantuan from a Veronese, though the difference would be immediately apparent to an inhabitant of either city. The same thing may be true of the towns of the Emilia, though the variations are so considerable that a play written in the Modenese dialect has to be translated in order to adapt it to the stage of Bologna. The popular speech undergoes modifications from town to town, until at Piacenza it is a mere cadence that, to the ordinary ear, links it with that of Bologna, though the dialects of the two cities are still of the same group. Thus, step by step, all over Italy, each city, each village, each hamlet possesses, with its peculiar physiognomy, certain ways, observances, traditions that are all its own, and, moreover, its own language. And how deeply rooted the local characteristics are, we understand when we see how much more difficult it is to permanently transplant the Italian than the native of other countries. Hard necessity may drive him from his home, but the moment he feels that he has collected enough to live, however simply, in the place of his birth, his return thither is determined.

To the foreigner there is a great difference between these dialects as regards the ease of reading them. Not only are some much further removed from ordinary Italian than others, but also the orthography adopted by a given writer may be either a help or a hindrance in the way of understanding. The Roman dialect, for instance —which bears somewhat the same relation to Italian that *eau rougie* does to pure water—presents perhaps as few difficulties as any to the Anglo-Saxon reader, and yet the spelling of Belli gives it at the outset a false air of ruggedness, wanting in the writings of some more modern poets. The Venetian of Goldoni presents a barrier soon surmounted, as is also that of Fogazzaro in "El Garofalo," while the Veronese of Barbarani renders a vocabulary occasionally useful even to an Italian. Indeed, of several of the dialects a dictionary exists: that of the Milanese, for one, fills a volume respectable both in size and in appearance. Without it one would scarcely make much headway with the poetry of Porta, and a similar volume would be equally useful if you would properly understand the comedies of the Piedmontese Bersezio—and you would need another for the pleasantries of "Ehi! ch'al Scusa" of Bologna. As for the Genoese, which might well puzzle the Evil One himself as Basque is said to do, its asperities hide no treasure of literature that the world is the poorer for wanting. It is a boast among Ligurians that they possess a language which, as it is spoken among themselves, is incomprehensible to other Italians; and, so far as I know, no vocabulary of it exists. It is, indeed, a sort of pariah among the dialects, so that there need be little shame in confessing that, after nearly a quarter of a

century of practice, I should shrink from being left alone for long with one who can speak nothing else. It is true that nowadays these are in the minority, and are confined to the generation that is passing away.

So, on the other hand, it is fortunate that the ever-delightful sarcasm of Belli is embodied in language that presents no serious obstacles to the foreign reader. And, as I have said, even such as exist are diminished, thanks to a simpler system of spelling, in the case of two poets of to-day whose acquaintance many Americans may be happy to make. In fact, I think I may introduce here a little fable, untranslatable in all that makes it charming, that is so nearly Italian that I scarce need to notify any one that *er=il, vojo=voglio, fa'=fare, mette'=mettere, annammene=andarmene, agnede=andò, pijà'=pigliare, so'=sono.* I beg pardon of any to whom the explanation appears too utterly superfluous.

ER PORCO.

Un vecchio Porco disse a certe Vacche:
—La vojo fa' finita
Di fa' 'sta porca vita.
Me vojo mette' er fracche,
Le scarpe co' lo scrocchio,
Un fiore, un vetro all' occhio,
E annammene in città,
Indove c'è la gente più pulita
Che bazzica la bona società.——

Fu un detto e un fatto, e quella sera istessa
Agnede a pijà' er tè da 'na contessa,
S'intrufolò framezzo a le signore,
Disse quarche parola de francese,
Sonò, cantò, ballò, fece l'amore.
Ma doppo du' o tre giorni
Er vecchio Porco ritornò ar paese.
—Che?—fecero le Vacche—già ritorni?
Dunque la società poco te piace. . . .
—No—disse er Porco—so' minchionerie!
Io ce starebbe bene, me dispiace
Che ce se fanno troppe porcherie. . . .

A few of the "Favole Romanesche" are old acquaintances made once in Æsop or La Fontaine, but modernized in dress and still more in spirit. If ever they teach the old lessons, it is in a whimsical, topsy-turvy way; in general, they laugh them to scorn. Of the modern fables it cannot be pretended that all are equal to the sample given above, but all are gay, and ease and the grace of naturalness are not wanting, while on occasion the acuteness and the neatness of the sarcasm are stimulating as good champagne.

The 'Favole' as well as two other slender volumes are by Trilussa, whose *nom de guerre* is but a simple anagram of his real name, Salustri. All three of them, indeed, may be called pamphlets rather than volumes, and all of them have met with an unusual degree of favor from the public, though I cannot but think them of unequal value. Perhaps it is that the contents rather are unequal among themselves in the 'Favole' and also in the volume 'Caffè Concerto,' which consists of about seventy-five sonnets, some of them, indeed, charming, while a few are simply trivial, and there are many that seem more or less good according to the mood in which one reads them. All, however, have the undoubted merit of being full of life. Like those of Belli, they are the artless talk of the uneducated poor, or of the small *borghesi*, given with such truth that one seems to see as well as hear the speaker. Of the third volume there can scarcely be two opinions. 'Er Serrajo' is the story of the strike of the beasts in a menagerie, and is brimful of drollery and sharp, though light-hearted, sarcasm from beginning to end. Indeed, it is the peculiarity of the sarcasm of Trilussa that, keen as are its shafts and certain in their aim, they seem directed in the purest spirit of playfulness. There is no bitterness in the laugh of the satirist, though occasionally his gayety, like that of Beaumarchais, deals a heavy blow. Occasionally, too, he indulges in a touch of pathos, though this is very rare. The 'Favole' were, one by one as they were written, the entertainment of certain Roman *salotti*, and were introduced to the general cultured public in journals, and perhaps chiefly in a triumphal series of readings in various cities.

The readings, by the way, have lately been frequent, and other poets have by their means become known even to the many who never buy a book. It was easy to understand, in the case of Trilussa, with whom the form is so light and the laugh comes so readily, that even the unlettered should be taken by his charm. The recognition accorded to another Roman poet, Cesare Pascarella, does honor to the quickness and delicacy of perception of his audiences. Some of his sonnets, it is true, concerned perhaps with the reflections of a bootblack or a newsboy, are to be distinguished from those of Trilussa only, if at all, by a certain superior closeness of fibre. His humor is apt to be grim, and his muse is altogether a more serious personage than that of his brother poet. It is not so easy to give an example of his manner as of that of Trilussa. I can find no single sonnet so completely representative of him as the fable I have cited is of the other. I, however, take at random one entitled "Li Principii," being the view of a man of the people as to freedom of opinion; it seems to me to demand no explanation.

Diceva bene Checco a l'osteria:
"Ogni omo deve avécce er suo pensiero."
Pensi bianco? Si un antro pensa nero
Rispetteje er pensiero e cusì sia.

Vor dì', si te ce trovi in compagnia,
Je pôi dì':— Tu te sbaji . . . Nun è vero . . .—
Ma sempre semo lì, vacce leggero,
Perchè ar monno ce vo' filosofia.

E scrivetelo drento a la ragione,
Che fra l'omo e er principio cambia aspetto.
Io defatti, si in quarche discussione

Trovo che dì' co' quarche giovenotto,
Quello che sia principio lo rispetto,
Ma quello che sia omo lo scazzotto.

But Pascarella, if all his sonnets were of this order, would be little more than a continuation of Belli. This is, to be sure, high praise for him, as it would be for any poet of to-day, only he deserves much more. In the little series of five sonnets entitled "Er Fattaccio," the satire is of a seriousness which shows him capable of taking a line that is all his own, while in "Er Morto de Campagna" and "La Serenata," as Mantovani has well said, "you are conscious of something tragic and grandiose, a breath of the higher poetry, that causes the style to shudder and flash, even while it is still marked by the most perfect naturalness." But Pascarella has attained to a still greater height in "Villa Gloria," the story of the ill-fated expedition against Rome in which the youthful brothers Cairoli were engaged. I cannot resist the temptation to give authority to my judgment by borrowing a few sentences from the eloquent tribute of Carducci:

"Everything here is true; it is not the poet who speaks; it is a *trasteverino* who saw and took part; therefore, the *epos* comes into being in dialect form naturally, and not by convention. The *trasteverino*, I repeat, is one of the seventy; . . . and, at the distance of eighteen years, the ardor of his generous youth, pondered over and animating him anew, illumines his account with the splendors of a chastened fancy; and in that account, . . . by the impulse of the firm and muscular language, the epic line is lifted and spreads itself monumental through the five and twenty sonnets. Never did poetry in an Italian dialect rise to this height. The art and the power of Porta and of Belli are very great, but in a poetry that denies, mocks, destroys; classic if you will the art of Meli, but outside of life in an upper Arcadia. To give shape to the heroic ideal of the Italians who die for their country, with the emotion of a great heart of the people, with the sincerity of a man of action, in dialect poetry—no one had thought of that; no one had dreamed that it could be done."

The little volume that contains all the published sonnets of Pascarella closes with a series of fifty, in which a humble narrator gives the story of the discovery of America. Here the poet descends from the epic height to the level of common life, but to my mind he has written nothing more delightful in its way. The first sonnet of the series contains perhaps the nearest approach he has made to the lightness and pure sportiveness of Trilussa. Here it is, that you may judge for yourself:

Ma che dichi? Ma leva mano, leva!
Ma prima assai che lui l'avesse trovo,
Ma sai da quanto tempo lo sapeva,
Che ar monno c'era pure er monno novo!

E siccome la gente ce rideva
Lui sai che fece un giorno? Prese un ovo,
E lì in presenza a chi nun ci credeva,
Je fece, dice:—Adesso ve lo provo.

E lì, davanti a tutti, zitto zitto,
Prese quell'ovo e, senza complimenti,
Pàffete!, je lo fece aregge' dritto.

Eh! ner vede' quell' ovo dritto in piede,
Pure lì più contrarî più scontenti,
Eh, sammarco! ce cominciorno a crede.

And the comic vein runs through the whole narrative, though the fun is not always so broad as in this first sonnet. The naturalness is unerringly such that one is continually recognizing the speaker as an old acquaintance, and is perhaps surprised that one should have found him so much less entertaining in real life.

And just because in general the language of literature is Italian, and even those who habitually talk in dialect seek to express themselves in the purest Tuscan at their command the moment that they put pen to paper, in print the dialect seems properly to belong exclusively to the people. The masters of Romanesque poetry have consistently recognized this. So that, when one finds a series of poems like that in the *Nuova Antologia* for August 1 of this year, entitled "A Fiumicino," delicate pictures of nature in the Roman Campagna, one feels that, charming as they all undoubtedly are, there is no special reason why they should have been written in dialect. The same remark has been made about the eighteenth-century poetry of the Sicilian Meli, as well as of that of the Venetians Buratti and Lamberti. The criticism is perhaps not justified, but in any case it is certain that the plebeians who talk in the sonnets of Belli, of Trilussa, of Pascarella, give them a dramatic or comic vigor that carries us along with it, and impresses itself indelibly upon the memory.

Correspondence.

WHERE WE STAND.

To the Editor of The Nation:

Sir: The difficulty I find in the political situation, as I now see it, is radical. The tariff seems to me to be at the bottom of the trouble, and the protective system runs naturally into the labor question. The result, as I see it, is that the political forces of the country are, unconsciously but rapidly, arraying themselves on the two sides of Plutocracy and Populism—which last is merely a phase of Socialism; the struggle being for the possession of the machinery of the Government, and what that implies.

In the elements composing the Democratic party, or the Opposition, I see no principle of intelligent cohesion. The Opposition is made up of odds-and-ends, presenting nothing but rubble to build on. The old cries of economy, individualism, freedom of trade, elicit no response. The crystallization is on wholly new lines; and they all lead up to some form of Governmental interference, whether for protection of favored articles of manufacture or bodies of organized workpeople. There is no recurrence to sound political philosophy or principle. The enunciation of anything of the sort falls on deaf ears.

The money interest, or what I have called the plutocracy, has, naturally, secured complete control of the Republican party and the United States Senate. For the Populist, or Socialistic, element to dislodge it therefrom is, in my judgment, practically impossible; nor do I sympathize with that element—its political action and tendency seem to me inherently selfish and unsound. On the other hand, the plutocratic power is perfectly willing to feed out pap to the Populist elements in the form of class and labor legislation, pensions, etc., etc. Pursuing this system of bribery, it has, therefore, under ordinary conditions, nothing to fear.

This being so, and taking into consideration the enormous mass of our community, any future change in the Administration of our Government will be merely skin deep. It cannot go to the essence of things. In my view of the matter, therefore, we have entered on an entirely new stage in the history of the United States. We have grown rich too fast, and must accept the consequences; the old theories and ideals have lost their hold. The simple issue, now and hereafter, will, as I have said, be for the control of the machinery of the Government, and the consequent distribution of its favors and patronage through class legislation. A change will, and can, work no radical benefit, inasmuch as there is no earnestness or grasp of principle in the attacking elements. The protective principle cannot be disestablished. As Mr. Roosevelt says, it is a cardinal article of public policy.

If I am correct in this diagnosis, there is absolutely no place for me in the politics of the future. I abominate the whole protective system, "Trust" or "Union." The principles and theories of the Protectionists and the Populists are, to my mind, equally objectionable. Under these circumstances, I have reached the conclusion that, for me, "the jig is up." This last election puts the seal of finality on the changes wrought through the Spanish war, and the new influences thereby introduced. They are part of the system of the future; but I belong to the generation the work of which was done between the year 1850 and the close of the century. I am neither part nor parcel of the present or the future. Its problems and conflicts concern the next generation, and not those to which I pertained. We have entered on a new order of things.

Burnham Wood.

November 12, 1904.

THE SOUTH AND THE VERDICT.

To the Editor of The Nation:

Sir: Your editorial note on the causes of the excessive Democratic overthrow embodies the essence of a letter I was about sending to you, and which may therefore seem needless. But as my views were elaborated at greater length, and are those of a Mugwump for three decades who would have preferred (though he knew it impossible) Parker's success on a balance of reasons, it may not be without profit to your Southern readers to know that others take the same view of the avalanche, and why even a non-partisan Northerner, deeply opposed to the Republican "machine," finds the result rational, and on one side making for progress.

More than to any other one cause, this great surge of anti-Democratic feeling is due to the Southern question, aggressively forced to the front by the leading classes of that section for several years—a trinity which may be conveniently summed up under the heads, lynching, disfranchisement, and Booker Washington—the last trivial in itself, but all the more significant and mischievous in its implications and reactions. All these have stirred up through the North a fast-growing spirit of wrathful opposition, and the third a bristling scorn therewith, which altogether have many resemblances to the Northern state of mind just after the civil war, that took shape in the Reconstruction legislation. Of course, the present conditions make an exact recurrence of such Northern action impossible; but our Southern friends will make a great mistake, nevertheless, if they think the feeling can or will have no effect and do them no harm. It will be felt in many ways, some plain on the surface and some not, which they will not like; and will strengthen the hands of the dominant party for some very ugly administrative and possibly legislative acts, if they do not profit by this advance lesson. It is not any one of these items which has built up the new sentiment that the South is the same old South and must be taught a new lesson, but the cumulative effect of all.

First must be placed the steadily increasing horror and disgust at the lickerish delight in slaughter and torture which has spread over so much of the South, not surpassed—and in respect of the slow, Indian-like tortures, not equalled—by the Roman crowds in the amphitheatres. This has long since left all the stock excuses for it hopelessly out of sight, mere pretexts for a gloating, craving thirst for the infliction of torments which are almost ludicrous in their irrelevance: protection of women—when not a fifth of them have any relation to sexual outrage, and some of them are of women themselves (do women ravish women in the South?); law's delay—when nowhere in the South is there ever any delay in putting a negro to death, and many of the atrocities consist in taking the victim out of the hands of the legal officers on their way to the gallows with him, or out of the prison where he is waiting almost immediate execution, in order to put him to death illegally and give the crowd a fête. Hideous murders of negroes for petty larceny, or even for being "disrespectful"—in one case a girl was savagely murdered for refusing to tell a mob the whereabouts of her brother, whom they were going to butcher for a trivial theft; in another the excuse was that the negro was "saucy"—do the Southerners think this is going on for ever and yet the rest of the country put power in the hands of a party of which they form the controlling element? They have been deceived by finding some Northern apologists and much Northern perplexity what to do; they share the frequent fallacy that people will endure in growing volume for all time what they endure for a while in hope that it will right itself.

Even more rankling, because felt as snatching from us the fruits of lavish blood and sacrifice still passionately cherished in memory, is the wholesale abolition of the civil rights of the negroes as negroes, without regard to intellect, conduct, property, or any other token of fitness; making them a permanent caste of aliens with no motive or prize for good citizenship. This has been done with open and exultant boasts (swelling of late into a noisy chorus which has incensed Northern classes whose friendship the South cannot afford to lose) that it has virtually abolished the Fifteenth Amendment and half the Fourteenth; and the demand has been openly made that the former be legally rescinded. Decoration Day is somewhat faded, but it is not so dead as that yet. This is the answer of the North and West to that demand. The Amendment will not be repealed; and the sooner the intelligence of the South stops playing with fire, stops looking back on and striving to repossess the fleshpots of reaction and obscurantism, the better for the section. This election shows that the Old Guard is doomed; there is no national footing for either a varnished slavocracy or a rebaptized Doughface element striking hands with it. The opposition factors are growing much faster in proportion. I do not say that the South may not maintain its disfranchisement laws to the full; but it will do so only by the utter sacrifice of any hope of sharing in the political control of the nation, of having its policy and its wishes again a part of the national programme; and its payments will not end with that. If it wants to be a partner with a voice, it must modify the laws and practice to allow the negroes to *earn* full citizenship if they will.

The capstone has been put to this structure by the Booker Washington incident; as to which it is enough to say that probably no Northerner, by any effort of intellectual sympathy, can put himself on the plane of even understanding what the hysterics are about. That the decencies of human intercourse to a great colored genius—Washington, Dumas, or Toussaint—involve opening your receptions to negro bootblacks and

plasterers, and approving the marrying of your children with the rabble of Darktown, seems to him as insane a piece of silliness as that the same courtesies to Li Hung Chang would presuppose a like extension to Chinese laundrymen or keepers of opium joints. The fact also that a guestship which would have been considered quite natural and proper by Queen Victoria, Lord Salisbury, President Loubet, or the Czar is felt as a burning disgrace by every Southern "cracker," and that the gentlemen join hands with the crackers, merely convinces him that it is the skin of a dead snake, and that the gentlemen ought to be ashamed of themselves and throw off crackerdom in mind as fast as possible, instead of nursing and cherishing it and making it a badge of superiority and a matter of pride. Mr. Washington is doing a far greater service to the Southern whites than even to the blacks; for as Southern society in its relations as part of human civilization must always be predominantly a white society, the man who is enabling it or helping it to have its energies free for its best work, instead of spending them in keeping down an upsurging tide of brutishness, who is helping to produce for their material basis a peaceful, instructed, thrifty, moral laboring and shopkeeping class instead of a herd of animals, is enriching the life of the upper ranks relatively more than those of the lower, because their pleasures and achievements are higher. It is hard to say whether the folly or the ingratitude of the wretched white beings who hound and libel him is the greater; both reach almost the highest attainable level. They ought to go on their knees to him, and compete for the honor of his presence at their dinners, instead of making themselves a spectacle to Europe and the rational part of America by fabricating national danger and dishonor out of having the ablest and most useful man in the South, and the greatest natural genius it ever produced, do his work in the usual human fashion of intercourse with his fellow-gentlemen.

Whatever exceptions may be taken to the truth of my views on the Southern side do not matter in this case; all I wish to do is to present, the more crudely and sharply the better, the truth that these are the views which are strongly held by the un-Southern sections, and, it would seem from the results, even in the more progressive parts of the South itself; it is these which have borne a large part in whelming the Democracy and its superior programme of Constitutional and foreign and tariff and Trust policies in such tremendous ruin for the time. I am sorry for the latter, and would have preferred to take chances on the negro question and put the others in the foreground; but I cannot say that I am much surprised at the mass of people doing otherwise. N. E.

November 13, 1904.

DISSENT AND ASSENT.

To the Editor of The Nation:

Sir: In gladly renewing my subscription to the *Nation*, I venture a few words, as an old subscriber and constant reader, representing a class of your subscribers—I do not know how many such there are—whose voice is rarely heard in your columns. I mean the "straight" Republicans of the older sort, who have not been and are not in sympathy with your political views. I have never been able to agree with you on candidates and platforms, much as I enjoy reading your vigorous editorials and robust attacks on candidates and principles. I have voted for every Republican candidate for President from Grant to Roosevelt, even for Blaine against Cleveland, and have the temerity to say that I have never regretted my vote. I believe most thoroughly in Theodore Roosevelt, and, although I am no idol-worshipper, I recognize in him a strong, pure, just, honest, brilliant figure in our American political life. Several million Americans agree with me that his character is humane and noble, and that he is intensely *genuine*, with a record of having made as few errors in the troublous times of the past three years as we may expect from any mortal, however gifted and exalted. His voice may be occasionally strident, and possibly he may be a little too dramatic at times; but he means right, and the people instinctively trust him.

But, notwithstanding our divergence in the equation of candidates and certain public policies, I wish to thank you for your undeviating, firm, and magnificent defence of liberty and human rights. No paper that I read has rendered better service against the rising tide of racial prejudice, against unjust suffrage laws, and the insanities of mob violence than you have; as well as against the insolent treatment of inferior races—even if they are what Kipling calls them, "half devil and half child"—by the so-called Christian nations. Your paper has ever been true as the needle to the pole for our common humanity and the rights of man. Here is one high plane on which you and your Republican readers can meet. Keep on in the noble work of opposing the recrudescence of ancient prejudice which our modern life ought to have outgrown. There is no room in America for a dominant and a servile race, or for inequalities, except so far as natural conditions create them. Every one admits the difficulties of the negro problem in our Southern States. But slowly the best sentiment of the Southern people, naturally chivalrous, noble, generous, will assert itself, and a consciousness of human brotherhood will emerge from the base hatreds of our day, largely engendered by crafty politicians. Industrial forces, economic principles, and evolutionary tendencies will gradually work the problem out, allied with the sense of justice natural to the human heart. Meanwhile, papers like the *Nation* must do the work of clarifying public sentiment and keeping the Northern conscience from being befogged. Questions of tariff and the extension of our territory are transitory and incidental; but the question of human equality will always be with us. It is not the politicians of the South—who have everything to gain by appealing to a perverted public sentiment—but its thinkers, moralists, and, above all, its business interests, that will gradually emancipate the public mind of that great and important section of our country from a misinterpretation of the basic principles of Republican government.

Your paper has also always stood for civic righteousness, for economy and purity in government. You have fought a great fight against that monstrosity in our modern political life, the boss. You have often touched with a needle the source of infinite corruption in American politics—the power of the boss in manipulating great masses of voters, under some absurd party label, in the interest of the schemes of some sleek, fat, corporate power seeking to loot a municipal treasury, often by an alliance with the basest elements which abuse the right of suffrage. Never do I read your paper with more interest than when you strike a sledge-hammer blow against political corruption, no matter under what party banner it masquerades.

But, after all, it is the literary side of your paper which is most attractive to me. What range of appreciation and criticism you furnish to us in your reviews of contemporaneous literature! Let me specially mention one article in a recent number which seems to me to strike a high mark—the review of the life and literary work of Walter Pater, an author whom some of us dearly love, but who is strangely ignored by many Americans who are fond of fine literature. I do not know, of course, who is the author of that most excellent article, which seems to enter into the deeper meanings and finer spirit of Pater's life and the intellectual charm with which his writings are redolent. Such a lucid interpretation of an author whose delicacy and æsthetic aloofness limited the number of his readers, is as rare as it is admirable. The function of literary criticism is not gone when a reviewer remains who can do such delightful work in interpreting so elusive an author as the gifted man who wrote 'Marius' and 'The Child in the House.'

Truly yours, Milton Reed.

Fall River, Mass., November 14, 1904.

THE RURAL LANDSLIDE.

To the Editor of The Nation:

Sir: I had occasion to spend some weeks in rural regions, and from my observations I am persuaded that to the political activity of the rural free-delivery carriers is to be credited a large share of the Roosevelt vote.

Yours truly, Robt. Williamson.

Baltimore, November 14, 1904.

THE LEPERS OF THE PHILIPPINES.

To the Editor of The Nation:

Sir: Not the least interesting of the problems presented for solution in the Philippines is that which concerns the separation and isolation of lepers from contact with other natives. The authorities are in possession of the names of nearly four thousand lepers, and there are probably many more scattered about in the native villages. The proportion of lepers to the whole population is not more than one-fifth that which prevails in the Hawaiian Islands. Some of the lepers are cared for by charity, but the greater part live with their own people, there being not above six hundred in the leper hospitals maintained by several provinces.

While leprosy is contagious, it is no more so than consumption. It is quite as possible for leprous parents to bring into the world healthy offspring as it is for consumptive parents to do so, and the children of the one have quite as good a chance to escape disease as the children of the other. It is contemplated that where both parents are

lepers they may not be separated during their brief and miserable existence, but that generally the males shall be kept entirely apart from females and intermarriage prevented.

For the best results in handling this problem the Insular Government has bought up the land on the island of Cullion, including the entire village of that name, and the former inhabitants have removed to other islands. The island of Cullion is mountainous, with an abundance of spring water and a fine climate. A pipe line has been laid to the old village, which is being rebuilt for the use of the women, and a new village for the men will be established about two miles inland, where there is good agricultural land. It is expected that the physically able among the men will perform agricultural labor to aid in providing food for the colony. It is intended that everything shall be put in order and the houses made ready for patients before any lepers are sent to the island. This is to prevent the workmen employed in putting the island in order from abandoning the place through the fear which might be generated by the arrival of lepers.

The island of Cullion is situated to the north of Paragua and to the west of the main group of the Visayan Islands. It is practically in the China Sea, and is therefore most favorably situated, for the waters of that locality teem with food fishes of the finest kinds. The native diet consists in great part of fish, and the ease with which it can be supplied at Cullion adds greatly to the chances of making the unfortunates contented during the period of their living death.

At one time, under the old régime, lepers were allowed to solicit alms on Saturdays, in common with the beggars who have the freedom of all towns on those days. It was finally recognized that the giving of coins to the unfortunate lepers was introducing a serious element of danger to the community. Generally speaking, there is not a large number of beggars in the islands. One seldom sees any native soliciting food or alms unless afflicted with blindness or some malformation. A very large proportion of blind natives show evidence of this condition having arisen from smallpox, which has prevailed more or less throughout the islands.

It is not unlikely that when the natives realize that the Government has made wise and liberal provision for the people afflicted with leprosy, many cases, heretofore concealed, will be made known. It is anticipated that the number to be provided for will not reach 6,000, which is not a large number out of a population of nearly 8,000,000, the greater part of whom live with but little regard for sanitation or health regulations.

C.

Manila, September 30, 1904.

A BILINGUAL DOG.

To the Editor of The Nation:

Sir: Having read the article "Dogs and Languages" in *Littell's Living Age*, taken from the *Spectator*, I venture to offer you my experience with a Dane that was born and raised in Strassburg, Elsass, where he heard French and German. Certain commands he understood only in French, as, *Donne la patte;* others only in German, as, *Such,'* or *Leg' dich hin.* I brought him home with me, but he was poisoned after a year, when he had learned only the English word *go. Sick 'em* he did not understand. He would give his paw only upon the French command, never in response to *Die Pfote* or *Give your paw.* He would never find or lie down except upon the German command. On these points he was often tested by incredulous strangers.

Now this was stupid of him. I feel sure that dogs and horses understand only single words, or, better, sound-groups. A whole sentence is unnecessary. When my fox terrier, fast asleep under the table, hears the word *mouse* or *squirrel* used in sentences not at all addressed to him, he is upon his feet. *Mouse* may be English or German. *Eichhörnchen* would make no impression upon him. As Faust says:

"Ich finde nicht die Spur
Von einem Geist, und alles ist Dressur."

H. C. G. Brandt.

Clinton, N. Y., November 17, 1904.

A CORRECTION.

To the Editor of The Nation:

Sir: In your recent notice of Mr. A. A. Jack's 'Shelley' you say: "The hundred-odd pages of his essay are compact of that sincere, reposeful scholarship of which Oxford seems to keep the secret still."

Why drag in Oxford? Mr. Jack is a Cambridge man, and his college was Peterhouse.—Yours very truly,

R. C. Lehmann.

Fieldhead, Bourne End, Bucks, November 7.

Notes.

Looking forward to the spring, Macmillan Co. announce 'Southern Writers: Selections in Prose and Verse,' from the earliest times, by Prof. William P. Trent.

An Oxford edition of Shelley's poems is nearly ready for publication, and will contain material hitherto unprinted; the early poems first published in Professor Dowden's Life of Shelley, but omitted from his edition of the poetical works, and all other poems which have appeared in any previous edition; and the important fragments recovered by Mr. C. D. Locock from the Bodleian MSS. The volume will consist of about 1,000 pages, with three collotype illustrations, one the Bodleian portrait of Shelley, the other two facsimiles of his handwriting. Mr. Thomas Hutchinson, editor of the Oxford Wordsworth, has seen the new Shelley through the press, and has supplied footnotes where the variant readings are important, in addition to a few longer notes and a general preface.

Some one hundred and fifty letters of Mme. de Staël addressed to Benjamin Constant have been collected and will soon be published. It is, however, known, especially from citations made in German translation by the deceased littérateur Adolf Strodtmann, in his 'Dichterprofile,' that this by no means exhausts the series, a number of which were formerly in the possession of the Baron von Marenholtz of Hanover. An appeal has been published by the Baroness Nolde, a daughter of Baron von Marenholtz, in Florence, for information as to the letters used by Strodtmann, as all traces of his literary remains seem to have been lost. These and other letters of the period will possess exceptional value for the forthcoming edition of the correspondence.

Dr. Griffis's standard work on 'Corea, the Hermit Nation' (Scribners) now reaches a seventh edition, enlarged by four additional chapters in which the origins of the present struggle in the Far East are displayed, and the map of Corea has likewise been brought up to date. The latter-day chronicle will be found handy for reference.

Those who are acquainted with Mr. Francis Newton Thorpe's 'Constitutional History of the American People' and 'Constitutional History of the United States' will find in his latest volume, 'A Short Constitutional History of the United States' (Little, Brown & Co.), many reminders of the earlier works. Indeed, the book now published may be regarded as a condensation of the author's more elaborate treatises. There is the same reliance upon documentary sources, particularly statutes, Congressional debates, and decisions of the Supreme Court, and the same attention to the much neglected field of Constitutional development within the several States. The criticism passed upon Mr. Thorpe's earlier works, namely, that Constitutional history seems to be to him largely the record of the formation and application of a certain class of documents, must be repeated here. Of the economic or political influences which, in all periods of our history, have markedly affected Constitutional progress and moulded Constitutional opinion, there is here little exposition. It is but fair to say, however, that in a brief work like the present this limitation seems to us less of a defect than it is in works cast in more elaborate form, and that the task which Mr. Thorpe has set for himself was worth performing. We fear that the manual is too advanced for students below the college grade; but for those who can devote themselves to Constitutional history in its strict sense, or who desire a compendious review of American Constitutional development down to the present time, it should prove decidedly useful. Mr. Thorpe works hard and painstakingly for his readers, and his writing shows marked gain in simplicity and ease.

In getting up her 'Portraits of the Seventeenth Century, Historic and Literary, by C. A. Sainte-Beuve' (Putnams), the translator, Miss Katharine P. Wormeley, has made selections from the 'Causeries du Lundi,' the 'Portraits des Femmes,' and the 'Portraits Littéraires.' Some passages have been omitted; "these relate chiefly to editions that have long since passed away, or to discussions on style that cannot be made clear in English." In some cases, also, two or more essays have been put together to avoid repetition. The result is a gallery of portraits belonging to a single period—the *grand siècle*—originally scattered through Sainte-Beuve's works, and made more effective and interesting by being brought together. The translator was very wise in reinforcing them with illustrations, most, if not all, of them very good; the English or American reader of French literature is often worried by not having before his mind an image of the living subject. Miss Wormeley's version, where we have compared it with the original, seems very satisfactory. Her author, in one sense, lends himself to translation, for his style is both simple and clear; he may be subtle in what

he says, but is never involved or fantastic, or eccentric in the way he says it. There is, of course, a French quality in everything he writes which is untranslatable into another language, but everything else Miss Wormeley gives us. Here and there we have noticed a phrase or a word which we might have translated differently, but the instances are not of sufficient moment to cite.

The Frederick A. Stokes Co. publishes a volume of Mr. Henry Haynie's reminiscences under the title of 'The Captains and the Kings.' It is a curious medley of odds and ends jumbled together in a slovenly, journalistic style. Mr. Haynie, however, takes himself very seriously. He says: "The importance of the mission that is confined [? confided] to writers of every class is very great"; and he follows up this delphic remark with the following gem: "The most glorious of all the discoveries on which Genius has ever laid his hand is the invention of printing." Having thus cleared the ground, as it were, and duly impressed those of his readers who are not writers, he proceeds with some three hundred pages of gossip, from which it would be difficult to extract anything of value. Some readers may be interested to learn that when Daudet received a visitor he gave him "a hearty handshake, pointed to an open box of cigars, and said: 'Asseyez-vous, comment ça va' "; but three hundred pages of this sort of thing is a little too much for the most indulgent of readers.

The Macmillan Co. present a new volume of the "American Sportsman's Library," containing Mr. J. Parmly Paret's views on the past, present, and future of lawn tennis, together with a chapter on Lacrosse, by William Harvey Maddren. In his preface Mr. Paret complains of the insufficient supply of lawn-tennis literature, and offers ten pages of bibliography in proof of the alleged insufficiency. This may be the natural view of one who has already contributed several volumes to the collection, and who may have others *in petto;* but while we admit the value of a good handbook to the beginner in this or any other sport, we think the field has been pretty thoroughly covered in recent years, and we fail to find a *raison d'être* in the book before us. Mr. Paret differs from the Dohertys and other authorities on some minor points, but we cannot discover that he has anything new or interesting to suggest. The illustrations are numerous and excellent.

In 'Old Love Stories Retold' (The Baker & Taylor Co.), Mr. Richard Le Gallienne has collected eight short sketches first published in the magazines. Nothing can take from the dignity of Dante's love for Beatrice, not even Mr. Le Gallienne's lapses of taste. It is one of the gravest faults of a self-made man of letters that he cannot for long keep up the language suitable to his theme. Mr. Le Gallienne, for instance, will write a few paragraphs in a style really exalted, and then, as it were, come down rather suddenly to breathe. After telling us that Beatrice was hardly more aware of the existence of Dante's love "than a new star has care of, or is aware of, its discoverer," he adds that she preferred "the attentions of the society young fellows of her set." However, we prefer Mr. Le Gallienne's low-ranging style to such a flight as "He loved her—yes!—and yet! Yes!" (p. 96). Though the woman still lives who was the cause of Lassalle's untimely death, Mr. Le Gallienne thinks the story old enough to be included with the classic tales of unhappy love, and he may be right; but we see no excuse for the allusion on page 122 to the more recent tragedy that closed the career of Parnell. It is obvious that if poets did not, as a rule, lack a sense of humor, we should have to do without a great deal of bad poetry and some very good. We have lately read Wordsworth's testimonial to his wife that she did her duty in ignoring "my affection for other women." Mr. Le Gallienne, too, considers that a poet's wife should be content to see her husband "subject to passing emotional possessions," and, while his fancy roves to others, should glory in being his "own heart's home." Perhaps she should. It may even depend on how good is the poetry that the other beauties inspire. But it is impossible to read without a smile the serious statement of the duties of a poet's wife on page 84. The illustrations that crowd the volume are a curious medley, partly reproductions of Rossetti, portraits, pictures of houses, and, running throughout, very poor, sentimental marginal vignettes.

'The Expert Maid-servant,' by Christine Terhune Herrick (Harpers), is addressed to the great army of American housekeepers who begin their married life with only one servant, and, in the natural course of events, double and treble their anxieties in the kitchen to keep pace with the nursery and the exchequer. These are they for whom the servant problem is most acute, and they will find Mrs. Herrick a useful guide. She wisely lays some stress on our duties to our domestics, not to be slighted if we demand that their duties to us shall be their first consideration. The housekeeper's reach should always exceed her grasp, and Mrs. Herrick's expert maid-servant is naturally one to dream of and not to see. The mere recapitulation of the duties of a maid-of-all-work during one single day, and the perfection implied, will kindle the ambition of many a young housekeeper. To the disinterested reader those seven pages beginning, "Rise at six o'clock and have clothing in readiness so as to be down stairs by six-thirty," and ending, "Finish putting the kitchen in order for the night," seem to furnish all a domestic needs to ask from what the old hymn calls "the daily round," and especially "room to deny herself." Some people prefer factories, and so should we, but the ideal servant of Mrs. Herrick's visions will no doubt delight in the artistic finish that has been lavished on every instant of her waking hours.

The Loan Collection of Historical Portraits which was exhibited at Oxford last spring has left as its permanent record a beautiful illustrated catalogue (Frowde). Since no one who died after 1625 was represented, the collection confined itself almost wholly to the Tudor period. Out of the hundred and thirty-seven portraits which were brought together, only eight precede the accession of Henry VII., while at the other end no one figures who was not born in the reign of Elizabeth. Although we have spoken of this collection before, the beauty of the catalogue brings us back to the subject. Of the forty portraits here reproduced the finest is Holbein's Archbishop Warham; but Holbein, though the most important of the Tudor portrait painters, is not the overshadowing personality of the present volume. The selection is very representative, including many unknown artists as well as unknown subjects. Next to Holbein, the artists who had highest place in the Oxford collection were Sir Anthony Mor and Federigo Zuccaro. Mr. Lionel Cust supplies an interesting preface, wherein among other things he discusses the methods of Tudor artists. Indeed, the whole collection should be studied with the following fact in view: "During the whole of this period, from Holbein downwards," says Mr. Cust, "the painter's practice was to make a drawing, probably at one sitting only, from the subject, with notes of the costume and accessories. The portrait was then completed on panel in the painter's studio, and when once completed was capable of being repeated many times, or even varied by the painter or his assistants." In all respects this catalogue is worthy of the Clarendon Press.

The elegant dress and seductive title of the late Charles Warren Stoddard's final contribution to the literature of the "Summer Isles of Eden," namely, 'The Island of Tranquil Delights' (Boston: Herbert B. Turner & Co.), together with his reputation for idyllic writing in the past, lead one to open it with high anticipations. Alas, that they remain unsatisfied! He might have given us tales of hot blood and tropic nights, of vengeance, love, or the mysteries of the *kahunas*. The elemental passions and ambitions of the most democratic of autocracies offer a rare field for the psychologist of the Henry James order. Musings, as of one lying on the sands, looking up at the blazing constellations, while the surf beats on the reef and the wild dove murmurs in the shrubbery—these, too, would have been in keeping with the theme. Perhaps these last are what the author planned; if so, his plan encountered shipwreck in the launching. One does not muse hopping on one leg; and there is a sensation of hopping, or at least of breathlessness, in all these chapters. The sentiment does not ring true, the execution is mechanical, there is no spontaneity. The elasticity of youth passes, mentally as well as physically; a vein of experience may be worked out; the vividness of early impressions may be blunted by much reiteration. We know not which of these misfortunes, if either, had overtaken our author, but the lack of reality, or even of verisimilitude, in the present collection is too evident to be ignored.

The admonition *De mortuis* may fittingly be applied in noting the appearance of the late Mr. Laurence Hutton's 'Literary Landmarks of the Scottish Universities' (G. P. Putnam's Sons). It is of the same type as its predecessors, a readable little book with a thread of history and a great deal of gossip, personal and otherwise. Mr. Hutton's vein of humor, essentially American in spite of his ancestry, hardly interprets the more complicated if less easy and polished Scottish mind. There are forty-two good illustrations from photographs and old prints.

That a presumably orthodox and historically conservative theological seminary like that of Bangor heard with pleasure the lectures making up Dr. John P. Peters's 'Early Hebrew Story' (Putnams) and urged their publication, marks a very significant change

within a few years. In this book Dr. Peters deals with Genesis, its myths, folklore, poetry, historical residuum, and moral and religious value. His treatment is trenchant, but it is very sympathetic, and has a certain soundness of literary and æsthetic appreciation which is too often lacking. These tales of the childhood of the world are human for him, and nothing human is alien. They are also abidingly significant. So, in the end, he swings round to giving them place and meaning not only as history, but as a continuously constructive influence. "To the child," he says, "Genesis is the most charming book in the Bible." That is true for many others besides children. But he adds: "To the child, also, Genesis is full of spiritual instruction." True again if, in the last phrase, the instruction is thought of as like the forces of nature—the sun and the rain working unsummoned—and is not packed in lessons. However it may be, in the tales of the Hebrews there lie a moral energy and a wealth of spiritual suggestion that elsewhere are rare. It is the great merit of such a book as this to bring that home very directly and without weariness of sermonizing.

Mr. St. Clair Baddeley has written for travellers an account of 'Recent Discoveries in the Forum, 1898-1904,' which is issued in convenient small shape, with attractive print and illustrations (Macmillan), and is considerably better in substance than the similar English book, of almost identical title, noticed in these columns a few months ago. It would be more agreeable yet if the author had allowed us to take him a little more for granted; but otherwise the book is a pleasant piece of writing by an intelligent and enthusiastic observer of the excavations, and will doubtless prove a useful pocket-companion to those who know the Roman Forum as it was before 1898, and do not care for more scientific accounts of the later work, like those of Hülsen and Vaglieri. The theories and identifications advanced are mainly, though not entirely, those of Boni (who is reverently cited as The Excavator); but Mr. Baddeley is evidently acquainted with other views.

Among the many ephemeral sketches of life in India a place of honor should be allotted to Herbert Compton's 'Indian Life in Town and Country' (Putnams), apparently the initial volume of a series designed to exhibit "Our Asiatic Neighbors." India as it is, from the point of view of a man who has lived long in the country and wields a facile pen, is here presented in a series of lively and graphic essays describing Indian native life on the one hand and Anglo-Indian life on the other. Without erudition and with some old-fashioned errors (such as the statement that women were not secluded in India till after the Mohammedan conquest), this little book yet gives a true as well as a vivid picture of Indian life as it is to-day. A future edition should modify the statement that music-halls and horse-races are "quite outside the genius of the people" (p. 92), in so far as to admit that the genuine Aryan Hindus celebrated horse-racing and built music-halls some thousands of years ago. To insist (pp. 31 and 94) on the spelling *chloradyne* is an oddity in an old campaigner, who probably was never without a bottle at hand.

Mr. G. E. Ward, whose Englished version of the Hindustani 'Bride's Mirror' was noticed in these columns last January, comes before the public again, in his laudable desire to arouse interest in modern Hindu literature, with the transcribed text and translation of 'The Quatrains of Hâli' (Henry Frowde). Hâli's real name is Saiyid Altâf Husain Ansâri. The Rubâiyât of this poet of the nineteenth century lacks the power of the more familiar Persian singer, but these *obiter dicta* are not without a charm of their own. Many of the stanzas are modern versions of old Sanskrit verses, such as that in regard to fate and free-will: "Cowards have always yielded to fate; those who have courage have exercised free will."

'Dirr's Colloquial Egyptian Arabic Grammar,' translated by Mr. W. H. Lyall (Henry Frowde), is a really excellent little introduction with very full and carefully arranged exercises. Marked "for the use of tourists," it may be doubted whether tourists will have patience to plough their way through it. Its level is higher, and lies between the generally useless phrase-book and the grammar in the grand style. The translating and the proof-reading seem both to be carefully done.

The 'American Jewish Year Book' (Philadelphia) continues its useful course. Prominent in the new issue is a series of biographies of Jews eminent in professions, etc., and a very full account, with extracts from state papers, of the negotiations with regard to Jews visiting Russia on American passports. In the story of the year many will be surprised to read of the appearance of anti-Semitism in Great Britain, up till now most tolerant, socially and economically. An outbreak at Limerick in Ireland is chronicled, evidently due to Jewish clothes-dealers demanding their pound of flesh, and another at Dowlais in Wales. Zionism, also, has some space, and the lamented death of Dr. Herzl. In this strange cross of an ideal and of economic necessities the temper of the Jewish race finds keen expression.

Mr. Herbert Putnam alluded, in his presidential address before the American Library Association, to the death, a year ago, of "the patient formulator of rules," Charles A. Cutter. It is, indeed, as the author of the 'Rules for a Dictionary Catalogue' that Mr. Cutter will be best and longest remembered. The book has been a recognized authority ever since its first appearance, in 1876, as part ii. of the Special Report on Public Libraries. The fourth edition, which the author was preparing for the press at the time of his death, has just been issued under the editorial care of his nephew and successor at the Forbes Library. It has been largely rewritten, to conform, as far as practicable, with the rules which have been under consideration for some years by a committee of the American Library Association of which Mr. Cutter was a member. The rules formulated by that committee will presumably be followed by a large number of libraries, especially by such as are using the printed cards of the Library of Congress. They are, however, very largely the result of a compromise and not always consistent; it will therefore be an advantage to the cataloguer to have at his elbow a consistent code of rules, made with a single purpose. This, more than anything else, will give 'Cutter's Rules' their permanent value.

While the preparation of the combined catalogue (*Gesammtkatalog*) of the libraries of Prussia is progressing favorably, an interesting innovation has been established in Berlin, at No. 5 Dorotheenstrasse, the headquarters for general information concerning the libraries of the Kingdom. Information as to where a book can be found is furnished for the sum of 10 pfennigs in stamps.

In *Petermann's Mitteilungen*, number nine, Dr. Karl Sapper gives an account of a journey in Guatemala and Salvador, the scientific results of which are to be found on two accompanying maps. The region affected by the earthquakes of 1902 showed few signs of recovery. A west-coast port had been rendered almost inaccessible, and a railway connecting it with the interior had ceased to be operated. The building of another projected railway had been given up. Quezaltenango, the second town in the republic and once the centre of a rich coffee-growing district, is being deserted by its inhabitants and its trade diverted to the capital. The industrial conditions of western Salvador, so far as growth and progress are concerned, are similar. Dr. S. Passarge describes Kanem, which lies to the northeast of Lake Tchad and is the oldest of the Mohammedan states of the Sudan. Its superficial features of steppe and valley he believes to be largely due to the fact that it was the resort in ancient times of vast droves of antelopes, zebras, and other animals. The editor, Dr. Supan, gives in a series of maps the geographical results of the Antarctic expeditions, and Prof. Bogdanovitch concludes his geologic sketch of Kamtchatka.

—Mr. Goldwin Smith's informal review of Morley's Life of Gladstone has been published in a small volume, with the statesman's portrait, by Unwin in London ('My Memory of Gladstone'). To Americans the most interesting revelation of personal intercourse occurs in the section dealing with Mr. Gladstone's attitude towards our civil war. "Gladstone's actuating motives, certainly," we read on page 43, "were his regard for the bread of the British artisan, and his sympathy with all who were struggling to be free. With a view, probably, to the satisfaction of mortified friends of the North in England, he wrote to me suggesting that, if the North thought fit to let the South go, it might in time be indemnified by the union of Canada with the Northern States. As the letter, on consideration, seemed unlikely to have the desired effect, and not unlikely at some future time to prove embarrassing to the writer, no use was made of it, and it was destroyed." As for the reviewer himself, the most significant expression of a changed or relaxing opinion pertains to Home Rule, in the contingency of political enmity to England in Ireland surviving "the equitable settlement of the agrarian question and the reduction of the population to the number which the island can maintain," when "there may be a sufficient reason for letting Ireland go. It would be folly to keep her as a mere thorn in the side of Great Britain. It would be more than folly to attempt to hold her in bondage." She might come back of her own accord; but "two parliaments, two nations" (p. 68).

—Gladstone's fiscal scheme is questioned;

and, in the particular of its resting so much upon the consumption of a few important articles—"Suppose tobacco, for instance, were to go out of fashion, as some sanitary authorities say it ought, there would be a serious gap in the Budget" (p. 25). Gladstone put questions to vote in his Cabinet, contrary to Peel's practice, and "allowed a member of the Cabinet to set forth on a political adventure of his own and proclaim a policy independent of that of his chief and his colleagues, as the same politician [Chamberlain] is now again doing." This ushered in a change by which the unwieldy Cabinet is directed by "an inner conclave, something like that which, in the reign of Charles II., was called the Cabal" (p. 46). In regard to Gladstone's theology, we read of his apparent yielding to the reasoning in Newman's 'Grammar of Assent'—"a sort of *vade mecum* of self-illusion" (p. 84). Though he had partially put off his Establishmentarianism, "his orthodoxy and belief in the inspiration of the Bible remained unimpaired. This deprives his theological writings of serious value" (p. 81). "He has left among his writings nothing of importance in the way of political science" (p. 38). As for his classical excursuses, "Readers of *Homeric Studies* and *Juventus Mundi* must wonder how such things can have been written and given to the press by so great a man" (p. 79). His diffuse style proceeded from his habit of extemporaneous speaking, "and no man can speak literature *ex tempore*." The final strain, however, is one of eulogy for Gladstone's character, and the review makes one hope that Mr. Smith may have other appreciations of his contemporaries in store for us.

—If the "Extra Volume" to the Hastings 'Dictionary of the Bible' (Scribners), contained nothing but its two hundred pages of indices, its existence would be amply justified. That of subjects (nearly 150 pages) makes the whole contents of the work accessible to a degree no other encyclopædia can boast. Not only is it of subjects, but the author of each article or paragraph indexed is briefly mentioned, and it is possible to tell at a glance what authorities have dealt with each problem or element in a problem. When, as happens very often, different and differing authorities have treated in different places, and often out of place, the same problem, we come to bless their discursiveness controlled thus by that blessedest of all inventions, the subject-index. On Deuteronomy, for example, we see that we can have the views of Ryle, Woods, Driver and Kautzsch, with Strong specially on its ethics, Margoliouth on its language and style, and Baudissin on its idea of the priesthood. On Decalogue, again, we can have Harford-Battersby, Driver, Kautzsch and Barnes. Such conspectuses and the care with which the weightier rubrics are analyzed go far to make it certain that somewhere, on every subject, matter worth reading will be found, and thus to annul, as far as may be, the weakness of certain contributions. The index of Scripture passages is also equipped with such author references, but only to a partial extent, those of Hebrew and Greek terms unfortunately not at all; yet it is certain that in these last is hidden much lexocographical material.

—As for the articles composing the text of the volume, they are throughout of a more uniformly high value than those in the Dictionary proper. Some very few are simply and unintelligibly inadequate, *e. g.*, Concordances. Some are in evident supplementation of articles in the preceding volumes, recognized as inadequate, too late; *e. g.*, Ships and Boats, Wages, Samaritan Pentateuch. But the great majority are carefully worked out treatises on subjects which enter properly into the view of a student of the Bible, but which yet are hard to place in a dictionary of the Bible. Many of these subjects have assumed a new importance within the last few years and even since this Dictionary was planned. So especially with the Apocrypha; with the apocryphal Gospels, especially that according to the Hebrews; with the Diatessaron; with the Sibylline Oracles. The textual criticism of the New Testament is moving now from year to year, and a supplemental article was needed even to the excellent one in volume iv., by Nestle. In this same connection there is a good, if short, article on the Agrapha of Jesus, and a long and most excellent one on a subject as yet little worked in English, the Greek patristic commentaries on the Pauline Epistles. Again, such a discovery as the Code of Hammurabi of necessity claimed attention, and meets it here very adequately from C. H. W. Johns. The ethnic religions, also, in contact or kin with that of Israel have risen now much higher above the horizon than they were only a few years ago, and must be reckoned with by the most conservative. Here the reckoning is surprisingly satisfactory. Professor Jastrow has over fifty pages on the religions of Babylonia and Assyria, Wiedemann has over twenty on that of Egypt, and W. M. Ramsay and L. R. Farnell have nearly fifty on that of Greece and Asia Minor. Curiously enough, it is left to this volume to offer an article on the religion of Israel. It is done and done well by Kautzsch in 122 pages. Similarly belated treatments are those of the Diaspora by Schürer, and of Roads and Travel in the Old Testament and the New by Buhl and Ramsay. On the rest of the thirty-seven articles details are unnecessary. All are timely and are of a uniform scholarliness. The volume, as a whole, if it does not show the sensational novelties of "Cheyne," is solidly useful, and with it the 'Hastings Dictionary' closes much better than it began. It is now for Dr. Cheyne to furnish a similar index, if not similar supplements, to his undertaking. The multifarious variety of the views of his contributors and their irrepressible vivacity of statement render some such balancing-pole of a key a simple necessity. As it is, 'Hastings' with this addition has fairly drawn ahead.

—'The French Noblesse of the XVIII. Century' (Dutton) is a series of translations made by Mrs. Colquhoun Grant from the work styled 'Les Souvenirs de la Marquise de Créquy.' The seven volumes of memoirs originally published in 1834 under this title are to be classed among the suspected or apocryphal memoirs with which the literature of France abounds. It is not only that the Marquise de Créquy makes herself out to be one thing in the alleged autobiography while she was another in fact, but that the narrative of her career, edited a good many years after her death by the Comte de Courchamps, bears manifest traces of embellishment by a masculine hand. At the time of its appearance, Croker attacked the book vigorously in the *Quarterly Review*, and one may doubt whether a line of it was written by the Marquise de Créquy. However, it has enjoyed much popularity in France as a picture of life under the Old Régime, and may be accorded some value quite apart from its authenticity. Mrs. Grant is under no illusions concerning the historical merits of these memoirs from which her chapters are drawn. By compressing seven volumes into one she does away with a great deal that is pure padding; and if much remains which is egotistical and shallow, there may be enough of local color to repay abridgment and translation. The author evidently tried to catch the style of the eighteenth-century memoir writers, and had some knowledge of court life. If the text were more authentic, it would deserve a fuller criticism than we shall give it. Gossip and scandal form the *pièce de résistance*, as in most court journals. In this case a thin veneer of fine phrases about loyalty to King and Church is made to cover a vast deal of spitefulness about one's neighbors. Whether or not the particular anecdotes are true, this kind of writing is fairly faithful to the spirit of aristocratic society in France during the eighteenth century. The privileged classes, as a rule, were not well educated, and their members spent almost as much time in repeating as in making scandal. Illustrious exceptions will at once suggest themselves, but the average intelligence of the *noblesse* was probably not much higher than from the Marquise de Créquy we should suppose it to have been. The pride of the great families and their contempt for upstart people like the Neckers is one of the most notable ingredients in this book. Mrs. Grant's selections seem to have been made with judgment, but a heavy restriction is laid upon any translator by the fact that sharp sayings read more racily in French than in English.

—In 'A Mediæval Princess' (Putnams) Miss Ruth Putnam takes for her heroine Jacqueline, Countess of Holland, Zealand, and Hainaut, who, after a stormy, melodramatic career, lost her possessions to Philip of Burgundy. This book is not a romance, but, as the title-page assures us, "a true record." Miss Putnam, by her translation of Blok's 'Geschiedenis,' and by her own 'William the Silent,' has shown a deep interest in the Netherlands, and her familiarity with their annals is obvious at many points in the present volume. Toward Jacqueline herself the ordinary attitude of historians has been that taken by Martin, when he calls her "belle et passionnée, altière et violente, sans frein dans ses amours et dans ses haines." Personally, the main interest of her career may be held to centre in her four marriages and the troubles in which she was involved by the second and third of them. Politically, the loss of her possessions is but an episode in the rise of ducal Burgundy. Her first husband was John, Duke of Touraine, at the time of his death the Dauphin; her second, John of Brabant; her third, Humphrey, Duke of Gloucester, the brother of Henry V.; her

fourth, a plain nobleman, named Van Borselen. The chroniclers differ hopelessly about Jacqueline's personality. She may have been beautiful and persecuted, or a dissolute vixen. From her second husband, at least, she received wretched treatment, and was forced to leave his court, finding refuge in her own Hainaut. After this she took steps to secure a divorce, but before Pope Martin V. had given her one she prepared a way for great troubles by marrying Humphrey of Gloucester. In the fifteenth century it was the natural destiny of an orphaned heiress to be intrigued for in the most shameful manner. Jacqueline's marriage with John of Brabant represents one intrigue to prevent her lands from passing outside the Burgundian zone. Her marriage with Gloucester was an unfortunate circumstance for the English, inasmuch as it alienated Philip of Burgundy from their ranks. The fear that an important section of the Low Countries would fall to the English line rather than to his own, cooled the desire to avenge his father's murder, and made him think of an alliance with France. On the most moderate calculation, his dispute with the Duke of Gloucester cost the Duke of Bedford three years' delay, and is thus more or less connected with the famous siege of Orléans and Jacqueline's contemporary, Joan of Arc. But Miss Putnam is not concerned to write a chapter in the history of the Hundred Years' War; and if the Dukes of Burgundy and Gloucester figure largely in her pages, it is because they have much to do with the life of the central character. Miss Putnam has mastered her sources, and writes of Jacqueline sympathetically, yet without exaggeration.

The Ragged Messenger. By W. B. Maxwell. G. P. Putnam's Sons.

A delicate moral question involved in the suppression of an important truth is discussed at length in Mr. Howells's latest novel. Jim Langbrith, "the Son of Royal Langbrith," had been allowed to grow up with false notions of his dead father's character and conduct, and the moment inevitably arrives when several persons find themselves embarrassed by the boy's innocent ancestor-worship. The family physician, Dr. Anther, after twenty years of friendly visiting, feels that he would like to marry Mrs. Langbrith, and she withholds consent because she fears her son, knowing that he would take high ground about insult to his immaculate, incomparable father implied by her contracting a second marriage. Anther cannot persuade her to cut the knot by divulging the truth, nor to let him do so.

The situation remains quite stagnant until Jim conceives the happy idea of presenting a brazen image of his parent to the public library (one of Royal's numerous gifts to the town of Saxmills), with a grand unveiling ceremony at which Royal shall be celebrated in oratory and his virtues recited to a new generation for the perpetuation of his sainted memory. Dr. Anther sees that the perpetration of such a monstrous folly should be prevented; but instead of facing Jim with the facts, he runs about seeking aid and counsel. Only two persons besides himself and Mrs. Langbrith know the infamous truth about Royal, one of whom, Hiram Hawberk, has found surcease of sorrow in the opium habit, while the other, John Langbrith, is too busy managing the mills left by his brother in a flourishing condition to bother about old scandals. Appeal to Mrs. Langbrith is vain. She has always been too feeble even to take a hand in making the bed in which she must lie; she can only remain prone and helpless in any sort of a bed that circumstance has made for her. Anther in desperation seeks advice from a judge and a clergyman. The judge points out luminously the wisdom of letting sleeping dogs lie, and the clergyman is of opinion that the question of concealment or disclosure is still, as it has always been, strictly the affair of God, who must not be forced, and who, if revelation is part of his scheme, will reveal at a fitting moment. The violent manner in which the revelation is finally made does not support the clergyman's confidence that mundane matters are best left to the management of a just and merciful God.

The interest of the tale is not meant to lie in action and incidents, but in characterization and discussion of the question at issue; and as the principal characters fail in energy of any sort, while the situation suffused by the question is exceptional, almost improbable, interest never rises to the point of agitation. Mr. Howells may have begun with Jim Langbrith in mind for the central figure, but as the story goes on Jim is side-tracked in favor of Dr. Anther; and his love affair with Hope Hawberk is plainly not the one that the author cares about. He is well aware that elderly lovers are poor stuff for fiction, and he associates Anther's hesitation and vacillation with his age; but it is difficult to imagine a man at any age wanting Mrs. Langbrith enough to force the pace. Decidedly, middle-aged lovers should be excluded from stories unless one of the pair has had in youth fire that lasts—inextinguishable fire. Moreover, the pair under consideration is afflicted with that general incompetence for dealing with life which naturally relegates people to an obscurity that should be respected.

So far as truth of representation goes, nothing could be more exasperatingly true than Mrs. Langbrith, but a real Dr. Anther would probably have shown more decision. A successful country doctor gets used to cases moral and sentimental, and the prompt treatment of such cases has much to do with his success. Jim Langbrith is not developed with the author's usual precision. The pretentious, rather unpleasant youth of the first chapters does not gradually, before our eyes, grow into the man who in the last passages accepts disillusionment in the finest possible way. Perhaps we are meant to infer that Jim inherited his father's nerve. Throughout the book we miss an assurance of Mr. Howells's mastery of his whole subject, and are obliged to be content with occasional inimitable scenes and sketches of minor characters. Jim Langbrith's ironical mentor, the German-American Falk, is vividly suggested, and John Langbrith makes a conspicuous addition to the author's gallery of typical Americans, one not flattering to national vanity. There is no one like Mr. Howells for ruthless fidelity in his national touch.

A common trick, not only of rubbish writers, but also of very good novelists, is to choose for representation a person endowed by nature with some rare gift. A star always draws, and if an author announces firmly and frequently that he is exhibiting a star, only a few discriminating readers stop to question whether he has made his assertion good. Most people take him at his word, and, as they follow the wonder's career, have a pleasant sense of being in exalted company. To secure popular favor for a novel, an irresistible beauty is almost a necessity, and a great singer, dancer, financier, statesman, criminal has always a chance of making a hit. A great poet is a more doubtful lure, partly because the public does not take much stock in great poets, and partly because the poorest as the best of novelists must have a respect for and even a fear of great poets, and therefore modestly shrink from appearing to identify themselves with such an infrequent and dazzling apparition.

The author of 'The Divine Fire' (an author hitherto unknown to us), relying on the conscious possession of at least a spark, boldly offers a great poet as the principal figure of a long novel of modern London life—a novel which describes many human activities not intimately associated with the production of great poetry. Her postulate is that the poet is born; that his genius is independent of conditions actual or precedent, which can do no more than temporarily develop or hamper it, and that though poetic greatness implies in its possessor the possibility of a comparable greatness of character, it does not assure perfect goodness, and may be regarded as inimical to conventional respectability. One can say without hesitation that the author makes good her assumption that the Divine Fire descended and dwelt in Savage Keith Rickman, the son of a second-hand bookseller; a youth who, though perfectly at home with the Greek dramatists, had but an insecure hold of the letter H and could not drink tea gracefully in the presence of a lady. Though Rickman's head is in the stars, his feet do not escape the mire; his passions are strong, his emotions fervid, his intuitions sensitive and subtle; his dreams have a compelling power on action, and his expression an imaginative quality that distinguishes even his common talk from that of common men. As a man he is extremely interesting, and one may feel glad not to have a certainty that he was a great poet disturbed by having to read his tragedies and sonnets.

There is nothing sensational in his story. His sorrows and joys, trials and triumphs, are all in the natural way of life for one essentially remote from the condition in which he was born, and yet superficially

closely bound up with it. These superficial relations are described with a vivacity and fulness of fact that denote first-hand observation. The writer appears to have worked in a book-shop, to have lodged and fed in Mrs. Downey's boarding-house, and to have most intimately associated with Miss Flossie Walker. The improper Poppy Grace could be drawn without acquaintance; but Dick Pilkington, the broker, Jewdwine, Rankine, and Maddox, gentlemen practising the profession of letters, are all very real and stick in the memory. Jewdwine is an elaborate study of a well-born, very civilized Englishman, full of high conceptions of public and private decency and honor, who nevertheless has his price and can never resist the just opportune temptation. Miss Lucia Harden is the vaguest figure in the book—perhaps properly so, because she is a vision of perfection seen through the poet's sensibilities; she is the dream that Rickman found indivisible from reality, feeling both to be divine—the dream that inspired alike his best poetry and his best behavior. The plan of 'The Divine Fire' is rather large and is handled with noticeable ease, while the drama is properly developed through the nature of men and women without recourse to accident or artifice.

Since Miss Murfree captured the Tennessee Mountains for use in fiction, many adventurers have climbed her lonely trails and faced the peril of death from the swift bullet of the hostile native or from the sodden corn-cake and whiskey of the hospitable. Miss Murfree had a romantic vision which cast a glamour over the mountains, a constructive imagination, and a keen eye for the significant. By selecting for emphasis certain common aspects of character, habits of life, and methods of speech, without misrepresentation, she created mountaineers so amazing and amusing that nobody cared whether they actually existed or not. Some of her successors have concocted readable tales of adventure, relying both for tragedy and humor on the local assumptions that whiskey is man's natural drink and that killing is no murder; but none has possessed her talent for bringing such primitive stuff well within the scope of human sympathy and converting it into literature.

The author of 'Dr. Tom' has looked upon the serious side of local traditions, and represented his hero as an active reformer. He is a perfect hero, beautiful, brave, and strong, skilled in arts, and ready at any moment to lay down his life for a friend or a cause. He is also wealthy and without relations save the Thompsons of Thompson's Cove, who, overlooking his civilization for the sake of the blood tie, permit him to share their corncake and whiskey and feud of thirty years' standing with the McCalls and McCandlesses and all their Scotch-Irish kin by blood, marriage, or adoption. Dr. Tom, while willing to participate in forced casual warfare, sets himself resolutely to harmonize and to preach the advantages of cleanliness, work, and thrift—advantages that cannot be enjoyed by persons who never drop a gun except to take up a whiskey-dipper or a snuff-stick. The situation is well taken, giving opportunity for exciting escapades and contrasting points of view.

Unfortunately, the author's method is very poor; he seems, indeed, helpless before the task of constructing a coherent and effective tale. He begins with a direct presentation, then takes refuge in letters (stilted, unnatural letters), constantly narrates what he should show in action or conversation, and handicaps his principal people by accounts of their comprehensive perfection. The best sketch is that of Sis Thompson, an explosive mountain maiden. In Cal Clay, sheriff of Brett, with the physique of a giant and simplicity of a babe, we recognize the traditional frontier sheriff, one who reduces his countrymen to order by calling them "galoots" and "shore skunks," who takes the highest view of official duty with plentiful assurance that he "don't care a damn." The tragic fate of Dr. Tom is unexpected, and appears to have been brought about for the sake of a death-bed marriage and prolonged affectionate farewells. It gives Major Brett a chance for florid rhetoric and a unique suggestion for a testimonial. He puts to the stricken multitude a resolution: "That as a fitting though trifling tribute to Dr. Tom Hendricks, we declare in convention here and now that the said Dr. Tom Hendricks is now and forever shall be coroner of Brett, and that succeeding deputy coroners, for all time, shall sign him such on all official papers." Brett County had always preferred a dead coroner to a living one, and the enthusiasm with which the resolution was carried may have been as much an expression of relief as of regret.

None of the 'Blazed Trail Stories' has the fine imaginative quality that raised Mr. White's novel, 'The Silent Places,' so far above the average tale of wilderness adventure. Separate incidents illustrate the life of a logger, a scout, or a cowboy, but the illustration is limited to the outward and physical aspects of such life. They probably give a truthful impression of the mass of men engaged in occupations for which a strong body is more useful than an interesting soul, and fidelity to the average could make no demand on the author's higher faculties. All are good of their kind—a kind long familiar to us, acceptable enough at intervals in magazines, but without the rarity either of episode or character that helps short tales to bear the strain of the collected form. "The Prospector" seems to us the best of the lot. The figure of a man not born for worldly success pursuing it from youth to age, always falling short at a critical moment, and never knowing why, is not new in fiction, yet it has a pathos that survives much manipulation. A human instinct for fair play goes out warmly to the victim of apparently preordained bad luck.

The tale of "The Farm of the Dagger" is full of gloom. John Newcombe and Roger Honeywell, neighbors and tenants of ancient Dartmoor farms in the early years of the nineteenth century, disliked each other naturally, and the dislike, fostered by trivial irritations, grew to hatred, until each lived but to fulfil a horrid dream of vengeance upon the other. The evil tempers of the elderly men affect the fortunes of their children, for Eve Newcombe and Quinton Honeywell inevitably fall in love with each other and remain steadfast, in spite of parental cruelties, long separation, and misrepresentations of a wonderfully ingenious sort. No situation appeals less to modern sympathy. We can still get angry, but we are not revengeful—we have no time. A long account of a mean vengeance, conceived and wrought out by two sordid men, does not shock us, does not interest us; only bores us. Mr. Philpotts's farmers are intolerable bores, and his peasants and "mechanicals" only less tiresome because they show occasional gleams of humor. The love story is pretty, only a little too consciously so. Eve is an idyllic figure, but she is not spontaneous; the lines are too carefully pruned and polished. Daniel Coffin of the United States frigate *Chesapeake*, taken by the *Shannon* and carried across sea to Dartmoor prison, is involved in the unhappy situation at Dagger Farm. He is a resourceful person, and speaks to perfection the American language as it conveys itself to the ears of English novelists.

Critics and other persons who contend that grown-ups no longer read Sir Walter Scott's novels will not be surprised to hear from Mr. Crockett that even children nowadays reject them unless they are specially prepared and dished up in modern fashion. Mr. Crockett has no sympathy with those who believe that Scott's influence on children is pernicious—on the contrary, he was most anxious that his children should make the acquaintance of their country's great romance-writer at first hand; but, finding them resolute in opposition, he adopted a device to lead them on to compliance—a device, which, according to his own account, made almost what the French call a *succès fou*. He undressed the novels, stripped them of the trappings of romance and chivalry, of all that is characteristically Scott, and presented the skeleton, the bare plot and action, to enraptured listeners. We are bound to believe in the rapture, but not to feel sure that it will be shared by children who get the 'Red Cap Tales' printed in a book. Children are not overfond of reading newspaper accounts of events, however exciting, and Mr. Crockett seems to us to have dealt with the Waverley Novels in a style similar to that of a conscientious, not a lurid, journalist reporting a fire or a murder.

The life of a fishing community in the northern seas of Europe, whether it be on the west coast of Ireland or on the islands that lie to the north of Scotland, or on the coasts of Scotland herself, is always the life of crofter-fishermen. Men must practise two trades—must go out with the boats in the herring and mackerel season, and, for the rest, cultivate the holding or the croft, sowing the thin, barren soil for their strips of oats and potatoes, and painfully saving, when they can, three harvests (turf for fuel, and hay and oats), besides the no less uncertain harvest of the sea. But the sea is the great fact of life for them all, the great danger and the great reward. From the sea, death may come to any one of them—"the gentlest death that may be," as Homer said; and on the edge of it they cluster, turning their backs on the unfruitful treeless land.

In 'The Reaper' Miss Rickert has described the life of such a community in one of the Shetland Isles. Here the blood of Norsemen has mingled with the Celtic strain, and many of the names are purely Scandinavian. Terval Saemundson, the crofter whose life is the main thread of the book, has inherited from a Celtic mother the tendency to dream and desire what he has not the will to obtain. He has a passion for study,

especially for Norse mythology, and has visions of what he might do in the great world beyond the islands. But there is always some good reason why he should stay and work the croft, and not even take part in the fishing to which he was born and for which he sighs.

"The peace of the home fields, the Manse with its scrub willows and honeysuckle, the double row of little boats on the sandy beach, the turf dykes, the peat-stacks, the patches of garden, the slow upward spirals of smoke that now and again drifted across and half hid the black-tarred kitchens—all the dear familiar things filled him with strong impatience for the land and its life. . . . He found the answers to some questions in the broad silence of the moorlands, to others in the splash and suck of the waters about gigantic broken cliffs."

The story of Terval, however, or of the lives that were bound up with his, is not the essential interest of the book. That lies rather in Miss Rickert's power to give a sympathetic picture of life as a whole on Snarravoe. She has succeeded in impressing on her reader the charm that clings to all the humble or pathetic circumstances of life as it is lived in these remote places, untouched by the excitements and vulgarities of modern civilization. To express sincerely the atmosphere of an existence like that, where "Only the mightier movement sounds and passes," is a proof of great poetic insight, rarely so exercised in these days when commerce and sexual attraction divide the honors in fiction.

The influence of Mr. Hall Caine has colored the style as well as the plot of 'The Ragged Messenger.' The hero is a clergyman, the Rev. John Morton, who, like John Storm in 'The Christian,' devotes a remarkable oratorical gift to the service of the London poor, preaching everywhere except in churches, and startling the West End by his demand that the rich shall give up their possessions to the poor—an idea which is quoted to prove his originality. The story has hardly opened when Morton inherits a fortune of ten millions sterling, and proceeds to practise what he preaches. He marries a woman whom he has rescued from the streets, ignoring the devotion of a charming aristocrat, and refuses to be disillusioned or to blame any one but himself when his wife elopes with his secretary whom he had saved from starvation. At the end, the woman comes back penitent and at the point of death. He has given away all his money, and, feeling that his work is done, shoots himself at the deathbed of his wife. The story is full of melodramatic situations, without being in the true sense dramatic.

CHILDREN'S BOOKS.

Everything that can contribute to a child's æsthetic sense and furnish him with a high standard of comeliness in books, is contained in Messrs. Scribner's holiday edition of the late Eugene Field's 'Poems of Childhood.' The manufacture is generous, with broad margins, large type, and clear, black impression. The pictorial decoration has been intrusted to Mr. Maxfield Parrish; and his vivid color-plates, while repeating his mannerisms, infallibly hit the mark of faery fancy and grace of line and composition. There is but one, "Seein' Things," which, for its spookiness, parents might hesitate to place before some infant temperaments; just as there is one poem, "Bambino," a bandit mother's bloody exhortation to her young hopeful, which does not seem precisely in place in a collection like this. There is, further, more than a sufficiency of lament for lost darlings; and, undeniable as was Mr. Field's gift as a children's poet—a gift of sympathy before all—he mixed high and low in style, touching the sentimental, pathetic, or humorous stop with resort to elevated diction, dialect, or a queer archaic lingo *ad libitum*. Some of the poems are not for children at all.

Mr. Joel Chandler Harris's negro folklore verse has a parallel distinction with his prose, and is perhaps as well calculated to make a vivid impression on the childish imagination. Its metres are sympathetic to the subject and the race, in the "Camp-Meeting Song" as in the "Corn-Shucking Song," or, again, in the delightful lilting "Wishing Song." The reprinted collection, 'The Tar-Baby, and Other Rhymes of Uncle Remus' (Appletons), is handsomely got up, and Messrs. Frost & Kemble have worked harmoniously together in the illustrations and borders. The cover design, too, is felicitous.

'A Quintette of Greycoats' (Baker & Taylor Co.) is another interesting book, by Effie Bignell, about her woodland friends. Incidentally she gives the information that, though the selling or owning of caged gray squirrels is forbidden by law, a certain New York dealer is authorized to sell them to "naturalists, heads of schools, and others of like standing, who wish to make a friendly, helpful study of the little creatures." Mrs. Bignell's object, in this case, was the introduction of a colony of gray squirrels among the friendly red squirrels that live about her home and accept the hospitality of her study and "window-sill restaurant." Of the results of her experiment and the happenings on the way she tells a charming story.

Myrtle Reed's 'Book of Clever Beasts' (G. P. Putnam's Sons) is an amusing take-off on the observations and conclusions of certain popular writers on natural history. Readers who are familiar with the many comparatively recent animal stories will easily recall the originals of Miss Reed's Clever Beasts, and recognize the scientific themes on which she plays her whimsical variations; and while believers smile, doubters will chuckle to see by what adroit changes "natural" history is here made to become "unnatural."

Mrs. Olive Thorne Miller is to be congratulated on the success of her hazard of new fortunes in 'Kristy's Queer Christmas' (Houghton, Mifflin & Co.). After establishing her reputation as a writer of bird books, she has now produced a collection of pleasant, readable children's stories. The fourteen which make up the volume purport to have been told for the amusement of a sick child, and of them nine bear upon Christmas, to suit the occasion of their telling; yet there is very little monotony of subject, and considerable liveliness of style. The best story, as we might expect, is one dealing with birds, for whom a Tree is prepared by some children. But the stories are all good of their kind, and the book would be very suitable to give as a Christmas present, or to read aloud at a children's sewing circle.

Perhaps it is unfair to criticise Georgiana Goddard King's 'Comedies and Legends for Marionettes' (Macmillan) without some experience of its effects. The writer assumes that "a clever boy or girl can easily make the puppets," work the wires, paint the scenes, and speak the lines, though to the uninitiated this all seems difficult enough. Possibly, then, he or she may be so supremely "clever" as to make the plot of "Columbine's Marriage" comprehensible, and to eliminate all sense of incongruity, not to say irreverence, from the spectacle of St. Francis and Brother Bernard pirouetting on strings, and singing the Canticle of the Creatures in Punch and Judy fashion. On the whole, most spectators would probably prefer to see the two pantomimes of "Snowflake" and "Mother Hubbard," of which the story is well known and secular, and in which we are spared the mixture of Shaksperean English with modern slang. The print and the illustrations by Anna R. Giles are admirable.

'The Staying Guest,' by Carolyn Wells (Century Co.), is also a well got-up book, and would be entitled to more consideration if it were not a poor likeness of Kate Douglas Wiggin's 'Rebecca.' Here again we find two maiden aunts and a mischievous niece, but the plot is as much less satisfactory as it is more ambitious, while the evident determination to enlist our sympathies on the side of the child, however naughty, makes us wonder whether the authoress belongs to the school which believes that

"The only one thing that the old can know best
Is this, that the young must know better."

Another story of about the same order of merit is 'Irma and Nap,' by Helen Leah Reed (Little, Brown & Co.). Though the writer has at last parted from "Brenda," she still moves in a feminine world, where the boys merely afford occasions for the virtues or failings of the girls. The book as a whole leaves no very salient impression, for though Miss Reed points many a moral, she can hardly be said to adorn a tale. Irma is a little girl, and Nap is her little dog. Except for one visit of laborious instructiveness to Lexington and Concord, their life seems scarcely eventful enough to justify biography, especially in view of the short time schoolgirls have for reading and the many classics they might and can enjoy.

'The Basket Woman,' by Mary Austin (Houghton, Mifflin & Co.), bears the misleading sub-title of "a book of fanciful tales for children." The stories are not conspicuous for imagination, and though the writer tells us that "they all occurred in that strip of country which lies east of the Sierra Nevada Mountains and south of Yosemite," there is disappointingly little local color. One-half of the fourteen tales are fair. Of the rest, the five Parables from Nature are poor, and "Mahala Joe" and "The Merry-Go-Round" of the buzzards distinctly good. But when we read of "knee-long hair," a "finger-long troutling," and "the fume of the storm," or are told that the "wild bees began to whine," we must admit that if the plots are commonplace, the language at least is "fanciful."

'The River's Children,' by Ruth McEnery Stuart (Century Co.), is hardly a child's book at all. If the old negro woman's rhapsodies about the Mississippi strike even adult readers as absurd, we

may feel sure that children will simply skip them to get on with the story, slight as it is. The book impresses one as having failed of its aim. We ought to be thrilled by the silent stateliness of the Father of Waters; we are as a fact jarred upon by the tall talk to which he gives rise. The dialect of the Creoles and negroes adds to the sense of artificiality, and, without irrefragable proof, we shall hesitate to believe in ballet dances on supper tables, executed by or in the presence of respectable heads of French families. These blemishes are all the greater pity in a writer of such real and proved talent.

Turning to fairy stories, we have 'The Little Giant,' by Thomas Dunn English (McClurg & Co.). This writer is best known as the author of "Ben Bolt," but in the course of his long life (1819 to 1902) he wrote many children's stories, of which this volume contains four specimens. Three are reprints from magazines; one, "The Adventures of Wydawayk," has never been published before, and has a pathetic interest as the last story written by the old man for his grandsons. Under the circumstances, criticism seems churlish; yet it is safe to predict that this work will not be *ære perennius*. The language is too pedantic and polysyllabic for children; the plots are all of the conventional type; and the incidents might be described as a medley of the Arabian Nights, Indian legends, Grimm's Tales, 'Alice in Wonderland,' and George Macdonald. The only original touch is where the Little Giant teaches the Hyperboreans how to light their land with natural gas, and even this cannot be considered as a very brilliant flight. The illustrations, by Lucy Fitch Perkins, are the cleverest part of the book.

It is a comfort to take up a real classic of fairy literature, where the reader's only distress in welcoming another volume of a delightful series is the fear that it may be the last. 'The Brown Fairy-Book,' edited by Andrew Lang (Longmans, Green & Co.), fully sustains the reputation of its predecessors, while Mr. H. J. Ford's illustrations are more decorative than ever, especially where the new color-process is introduced. As usual, "the stories," so the preface tells us, "come from all quarters of the world." The North American Indians give us seven, of which it is interesting to note that five deal with animals and even, by a strange error in bird geography, with a "little robin redbreast." Lapland and Iceland each furnish five, with a large predominance of the magic element so dear to Northern Europe. Asia Minor gives us two, Brazil two, and India two, one of which, "Wali Dâd the Simple-hearted," is the most amusing in the book, though the single Persian tale is the most important. The story of "Father Grumbler," ascribed in the footnote to "Contes Populaires," bears no national stamp, but closely resembles "The Jackal, the Barber and the Brahman" in Miss Frere's 'Old Deccan Days.' Finally, we have one tale apiece from Australia, Basutoland, Japan, Germany, Ancient Egypt, New Caledonia, and Spain. The two last call for a special notice, the former as showing unmistakably the humorous cynicism of the editor himself, the latter as coming from the pen of a modern novelist, Fernan Caballero (1796-1877).

The appearance of a new edition of 'Granny's Wonderful Chair,' by Frances Browne (McClure, Phillips & Co.), less than four years after its reproduction by Dutton & Co., serves to show the great popularity of this old-fashioned story-book. This time, instead of Marie Seymour Lucas's pretty work, we have illustrations of doubtful merit by Edith Truman; instead of clear facts and dates about the curious disappearance of the volume from the market for over thirty years, we have an ecstatic eulogy by Mrs. Frances Hodgson Burnett, who loved the stories so well as to try to rewrite them from memory. To the unprejudiced reader the praise may seem extravagant, and the volume a little tedious. Still, either from its intrinsic merit, or from the "boom" given to it by Mrs. Burnett, this book has claimed and received public attention twice within four years, and in face of such a recognition criticism is superfluous.

Gass's Journal of the Lewis and Clark Expedition. By Sergeant Patrick Gass, one of the persons employed in the Expedition. Reprinted from the edition of 1811, with facsimiles of the original title-page, and the five original illustrations, a reproduction of a rare portrait of Gass, and a map of the Lewis and Clark route. With an analytical Index and an Introduction by James Kendall Hosmer, LL.D. Pp. liii.+298. Chicago: A. C. McClurg & Co. 1904.

Never before had an American book achieved such celebrity, swift as well as far and wide, as did the Journal of Gass scrawled when ink froze in the pen, or in a boat too unsteady for the captains to write. Printed at Pittsburgh in 1807, on the extremest of Western presses, it was within a year reprinted in London in a format never surpassed till the present sumptuous edition. The next year, 1809, it was chosen as the subject of one of the long articles in the first volume of the *Quarterly*, when it began to lock horns with the *Edinburgh*, hitherto the critical autocrat. In 1810, a French translation came out in Paris; and one in German, which Humboldt had been impatient for, was printed at Weimar in 1814. Four editions at home in five years and three beyond sea before two years more had expired—this was something unique. It bespeaks a popularity beyond the dreams of Dr. Thwaites concerning the acme edition or *opus magnum* of seven royal octavos and an atlas on the great discovery which he has now in press.

As the protevangelium, the first light shining in the utter and outer darkness of Trans-Missouri—and that seven years earlier than any other dawned—Gass must remain a centre of interest, no matter how many another original chronicle has been or shall be brought to light. Yet if his jottings shot up like a blazing rocket, they fell down as suddenly and as dead. No second foreign edition has come to our knowledge, and none at home within the last sixty years is known to the present publisher. The reason of this collapse we hope to make plain.

Dr. Hosmer's share in this work is no more than a tenth of its pages, but will secure nine-tenths of the interest. Writing of Gass and more than a score of his subordinates or equals, he has gleaned and grouped more particulars of their antecedents before their argonautic adventure and after it was over than have ever been published together. Several picturesque details he mentions, which had eluded the argus eyes of Coues through a lifetime of waiting and watching. Whatever he learned he sets forth with an "order which gives each thing view," and a vivacity which keeps our attention expectant and appetite growing by what it feeds on, to his last syllable in regard to Patrick Gass as a "typical wheelhorse man." The likeness and signature of Patrick from an ambrotype are unique among memorials of the first pathfinders to our farthest West. Still, from end to end of Dr. Hosmer's Introduction we find nothing we can in any way connect or interlock with the career of any individual of the score and more described by him as co-workers with Gass in the struggle up the Missouri, down the Columbia, and back again; not a word as to how any adventurer's character stood the supreme test. We may be told that it was enough to bring us to the words of Gass, and they would suffice if our brains were not in fault. We might be content if among the words of Gass we could detect even as much as the names of the men whom Dr. Hosmer deals with as his companions, while in truth not one of them has there a name to live or lives in a name, save that of Sergeant Floyd when in the article of death.

To take a single example: George Shannon is the first of the adventurers noticed by Dr. Hosmer "as a boy of seventeen, who ran away from school to enlist, and whose father had been lost and frozen to death." How shall a reader of Gass only—one of the class who can afford nothing more and for whom this edition was avowedly prepared—pick out Shannon in a journal which often notices but never names him? Plodding along among anonymities, he comes to this passage (p. 31): "We saw some person coming down the river on horseback, when we came to land and found it was the man who had preceded us with the horses. This man had been absent sixteen days, and his bullets being expended he had subsisted twelve days almost wholly on grapes." A believer in heredity which traces a chip to the old block might guess that the man always unnamed, but thus lost and frozen more or less, was Shannon. He would guess right, but could never know that he had, unless he could get a sight of the name George Shannon in Biddle's detail of the same incident (p. 70; Coues, p. 114. "The map of the route" promised on the Hosmer title-page, if not wanting in the book would have strengthened the reader's confidence in his guess, for it showed the rubric "Shannon's creek" near where he was lost and found, but that promise was not fulfilled. Thanks to Biddle, Coues, and the captain's notebooks, Shannon can be made to put in an appearance at various other points in Gass, and they would lend and borrow light by mutual reflection.

Our tether is too short to allow us even to touch on more than one additional point. The prospectus of Frazier's Journal becoming known to Dr. Hosmer through the *Nation* in 1893, he ought, we think, to have printed it as the best of his new finds. It was first to make known the name of a second rank-and-file writer like Gass, and to turn research into lines where Floyd and Whitehouse were afterward

brought to light. The more Frazier's title-page is kept before the people, the greater the possibility that his whole volume will burst its cerements, and the fencing-master may show himself as strenuous with pen as with sword. We therefore supply Dr. Hosmer's regrettable omission:

"Proposals for publishing by subscription *Robert Frazer's* [*sic*] Journal, from St. Louis in Louisiana to the Pacific Ocean, containing an accurate description of the Missouri and its several branches, of the mountains separating the eastern from the western waters, of the Columbia River and the bay it forms on the Pacific Ocean, of the face of the country in general; of the several tribes of Indians on the Missouri and Columbia Rivers; of the vegetable, animal [and mineral] productions discovered in those extensive regions, the latitudes and longitudes of some of the most remarkable places, together with a variety of curious and interesting occurrences during a voyage of two years, four months and nine days, conducted by Captains Lewis and Clark.

"Published by permission of Capt. Meriwether Lewis. This work will be contained in about 400 pages octavo, and will be put to the press as soon as there shall be a sufficient subscription to defray the expenses. Price to subscribers $3."

The centurial survival in hiding of the Whitehouse Journal makes all things seem possible for Frazier. No hairbreadth 'scapes are more romantic than the Whitehouse manuscript's—a deathbed gift to his confessor Vivaldi, deposited in New York when he went on a mission to Patagonia; obtained by Capt. Haley in requital for a signal service, by an order from Vivaldi back in California; rejected by the Congressional Library, as its price was too high; bought by a Yankee publisher, who, after use, for a consideration has resigned it to the Chicago citizen most sagacious and voracious of such treasure-trove.

Italian Villas and their Gardens. By Edith Wharton. The Century Co.

Mrs. Wharton has both the talent and the training needed for writing entertainingly and intelligently about her theme. To be alone a skilful artist with the pen is not enough. But add to this a discerning taste, a love for all things Italian, a rare appreciation of the highest form of garden art, an intimate knowledge of its finest examples, and we have an equipment that has given us one of the best of the many books upon the villas and gardens of Italy.

After a careful study of it one feels that Mrs. Wharton's words call up in even truer fashion the intimate charm of the Villa Gamberaia or the sombre stateliness of the Villa d'Este than do the intensely personal, albeit highly poetic, illustrations of Maxfield Parrish. Her statements are the soberer and more measured of the two. They strike nearer the truth. His paintings clothe the form of the original in an always beautiful but sometimes overstrained scheme of color. And yet, from work of such great decorative charm, so touched with high imagination, it seems ungracious to withhold the fullest praise. In one way the comparison is scarcely fair, because the writer's thought suffers not at all in the change from manuscript to type, while the painter's (and especially the thought of such a colorist as Parrish) inevitably loses much in translation from canvas to color-print. Nor is this said in disparagement of the really admirable results of the three-plate process employed. The reproductions are the best of their kind, yet no mechanical process can render quite faithfully the full-toned harmonies of Parrish's originals.

As the object of the book is not the description of the villa alone, but of its garden, and of the garden as it was at its best, before the influence of English taste had worked changes in most of the old villa gardens, the writer's choice of subjects is far more limited than one would at first suppose. Thus, in the neighborhood of Florence she finds but ten worthy of more than a mere mention, but these ten serve to fully illustrate all that was most characteristic in the Florentine villa. For Siena four examples suffice. Rome and its environs of course afford a field full of noble specimens of the art at its highest, while Genoa, Lombardy, and Venetia round out the finished whole.

The introductory essay upon the relation of the villa to its garden and of both to the landscape surrounding them is full of ideas which, even if they lay no claim to novelty, are eminently sane and just. One of the secrets of these old places our author has learned so well that we must let her tell it in her own words:

"Much is to be learned from the old Italian gardens, and the first lesson is that, if they are to be a real inspiration, they must be copies, not in the letter, but in the spirit. That is, a marble sarcophagus and a dozen twisted columns will not make an Italian garden; but a piece of ground laid out and planted on the principles of the old garden-craft will be, not indeed an Italian garden in the literal sense, but, what is far better, a garden as well adapted to its surroundings as were the models which inspired it."

As description forms so large a part of the book, it is to be regretted that plans, however meagre (mere thumbnail sketches would have served), have not been included among the illustrations. Without them, the descriptions, though well written, are sometimes hard to follow; with them, all would have been clear and simple. Those who have even a very considerable knowledge of the subject will find in the book description of places that have been but names to them, while those who know but little of the subject will find here an excellent introduction to it.

The Prado and its Masterpieces. By C. S. Ricketts. With fifty photogravures. E. P. Dutton & Co.

Since the chief pictures of the Prado are already accessible in excellent photographs and photogravures, there is no obvious reason for presenting them again in this expensive form. Furthermore, these twenty-nine folio plates of French manufacture are often muddy in quality, being in this respect inferior to the small plates of English make printed in the text. A little care in varying the tint of the inks, here uniformly brown and generally untransparent, would have made the illustrations more pleasing to the eye and more faithful to their originals.

Contrary to the wont of this sort of publication, Mr. Ricketts's study of the pictures goes far to justify the enterprise. His comment is always interesting, and often trenchant. It would be hard, for example, to imagine anything better said of the neurotic Theotocopuli than this: "The world which El Greco painted is seen by flashes of lightning, and in a spirit of hallucination and solar eclipse, when the dead seem to walk with the living." Indeed, the pages abound in such illuminating felicities, as when we are told that Manet is one of those painters who "approached art and nature as if the eye was without memory." Epigrammatic again, but absolutely just, is the statement that Velasquez had "not a profound sense of beauty, but a profound sense of style." Or, again: "His work is excellent good company, not for its racy record of facts and events, but for its tranquil charm; for the dashing Velasquez, the painter with a brush like a rapier, is a modern invention—the self-reflecting compliment of several bad modern painters, paid to the most refined among artists."

It needs no further quotation to show that Mr. Ricketts thinks his own thoughts vigorously, and brings to observation of the art of others something of the conscience and taste that he has shown in his own work as a decorator of books. As a writer of books, however, he shows inexperience, and when his text is reprinted in popular form, as it deserves to be, much of the running account of Titian and Rubens, for example, can well be spared as not of an importance to warrant such extensive digression from the theme, the Prado.

In the narrower field of connoisseurship Mr. Ricketts's contribution is only less notable than in that of appreciation. His suggestion (p. 136) that Petrus Christus may be "the link between the Van Eycks and Antonello da Messina" should be treasure-trove to neo-Morellians. The "Dead Knight" in the National Gallery is confidently—too confidently, perhaps—transferred from Velasquez to Zurburan. For the much-disputed "Shepherd with a Pipe" at Hampton Court the interesting theory is advanced that, by the simple expedient of painting in the robe, the hand and the pipe, some restorer has patched it out from a derelict fragment of Giorgone's "David" which Vasari mentions. The theory, though startling, is plausible. Mr. Ricketts is even sure that he has seen traces of the original armor above the restorer's drapery—an observation important if accurate. Space does not permit the enumeration of other new attributions equally interesting.

Mr. Ricketts's forte, however, is not connoisseurship. Appreciation such as this of Rubens's drawing is rare, and shows the true critic:

"His figures are not abstractions of facts, visualized separately, and connected by a conventional code of proportion; he draws figures as flexible solids seen in space, and influenced in their shape by the laws of balance and the actual facts of their substance, their faculty of bending or resistance. As a draughtsman he stands with Michael Angelo; their knowledge and their memory are greater than those of any other artist; they can rely upon their plastic sense when another man would measure and collect facts."

That Mr. Ricketts does not lack humor, let this suggestion of ways and means to add a good Rembrandt to the collection attest: "Some American millionaire, with tardy but possibly sound prospects in Cuba, might do this," hints our author.

A few rather ugly misprints have escaped

the proof-reader: page 9, *quarto*cento; page 23, Sforzias; page 76, *caste*.

The Greek Poets: An Anthology. By Nathan Haskell Dole. T. Y. Crowell & Co.

Mr. Dole has drawn for his collection upon some excellent translators—Shelley, Tennyson, FitzGerald, Worsley, Mackail, Symonds, Frere, and Professor Murray; and from others, for various reasons, less excellent—Prior, Chapman, Mrs. Browning, etc. If anything, the sources are too numerous and too varied in style and aim. This will confuse the ingenuous and serious reader and bewilder him somewhat. He needs the sign-posts and warnings which Mr. Dole furnishes occasionally, and something more. The admirable closeness of Mr. Mackail and the admirable freedom of FitzGerald are each illuminating in their way, if Mr. Dole will hold his candle of caution as to the method of each. Sappho, for example, is represented by eleven translators (of fourteen fragments), as diverse as Edwin Arnold, Rossetti, Swinburne, Lord Byron, and A. E. Crawley. By this process we get a reflection of Sappho as if from a series of mirrors, some concave, some convex, overlaid with composites of Lord Byron and the others. The verses by Elton entitled "The Rose" may mystify the enterprising student, who will search in vain for their original in his Hartung or Bergk. The reason is that the poem has nothing to do with Sappho: it is taken from the novel of Achilles Tatius (Bk. 2), who professes to give a *prose* version of a song sung by his heroine, Leucippe. The song (if it ever existed) belonged, with its pretty conceits, to the class of Anacreontics.

There are various good reasons for including Chapman and Pope among specimens of Homeric translation; but Maginn's ballads are, on the whole, painfully misleading, and represent a theory which is discredited by the best authorities in literary taste and comparative literature. With good intentions, Maginn was simply a traitor; and on that head we refer Mr. Dole once more to Matthew Arnold, to M. Bréal, and to Homer himself. The "Prometheus" may be much better represented by Bevan's vigorous and faithful version than by Mrs. Browning's, which justly offended FitzGerald's taste and scholarship. The truly appreciative and scientific anthology of Greek poetry, combined with a running commentary, like Mr. Gibb's 'History of Ottoman Poetry,' has yet to be written or compiled in English—perhaps because a good many people still insist on reading Greek for themselves. Mr. Dole's aim was not so large nor so scientific, though he absolves his conscience by writing "Oidipous," "Phaiakians," etc., thereby estranging us somewhat from old acquaintances. This fidelity should lead him to see that his printer avoids "Trachinioi," "Hippolitos," and also McGinn and MacKail. But the collection is to be commended in general: it covers a wide range, it contains many choice morsels; it is also handsomely printed, and suited to the purposes of the holiday season.

HAVE JUST ISSUED

A spirited translation into rhymed English verse in the metre of the original of

THE NIBELUNGENLIED

By GEORGE HENRY NEEDLER. $1.75. By mail $1.87.

A new detective story by the author of "The Holladay Case"

THE MARATHON MYSTERY

By BURTON E. STEVENSON. With colored scenes by ELIOT KEEN, *3d printing*, $1.50.

The scenes in the Borough of Manhattan and on Long Island and the typical New Yorkers that figure in the story give a peculiar air of nearness and probability to the strange happenings. A vampire figures in the astonishing conclusion of the book. Both this story and "The Holladay Case" (7th printing, $1.25) are also published in England, and the latter in Germany, too.

An informal, often humorous book on a vital subject

PEDAGOGUES AND PARENTS

By ELLA CALISTA WILSON. 290 pp. $1.25. (By mail $1.37.)

This book, written by a parent, among other things discusses schools and education, actual and ideal, and some of the elder educational classics.

A very human story for girls

DANDELION COTTAGE

By CARROLL WATSON RANKIN. Illustrated by Florence Scovel Shinn and Elizabeth Finley. $1.50.

A story which illustrates, but does not intrude, the merit of self-reliance. Four young girls are given the use of a tumble-down cottage, which they promptly put into shape, and in which they cozily keep house all summer. It is told in a simple, readable and very life-like manner. The young folks will live in the story and even old folks remember the joys of playing house.

LITTLE MISS JOY-SING—A little Japanese maiden is consumed with envy at the sight of the Prince-of-Don't-Care-What riding by with his glittering retinue, and wishes to become the Beautiful Pine Tree in his garden. Her wish is granted, and immediately there are many happenings to which a goblin fox of the most pronounced character largely contributes.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.
$5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

HOUGHTON, MIFFLIN AND COMPANY'S IMPORTANT NEW BOOKS

Valuable Biographies

THE AUTOBIOGRAPHY OF MONCURE D. CONWAY

"It would be difficult to name any other biography which contains so extraordinary a list of so prominent literary or scientific names in England or in America. It is safe to say that for personal anecdotes the book is unequaled, and that neither Boswell's Johnson nor Lockhart's Scott contains so many separate entries."—*The Nation, New York.*

Illustrated with a large number of interesting portraits and views. In two volumes, 8vo, gilt top, $6.00 net. Postpaid, $6.43.

LETTERS OF JOHN RUSKIN TO CHARLES ELIOT NORTON

A man's letters to his closest friend would often make his best biography. Such is the case with these letters from John Ruskin to Charles Eliot Norton. They are, in fact, a sort of autobiography; for they are the most familiar and self-revelatory of Ruskin's letters hitherto printed. In them he discloses his intimate moods, his inner purposes, his hopes and fears, his doubts and ambitions.

Two volumes, with many portraits, $4.00 net. Postage extra.

Of Historical Interest

ARBITRATION AND THE HAGUE COURT

By JOHN W. FOSTER

Mr. Foster is the author of two books on American Diplomacy. His new book contains a brief review of the events relating to arbitration up to the convocation of the Hague Peace Conference, and a full consideration of the Hague Permanent Court and the work which it has already accomplished.

$1.00 net. Postage 9 cents.

EVOLUTION OF THE U. S. CONSTITUTION

By JOHN A. KASSON

A clear account of the conditions existing at the close of the Revolutionary War, tracing the successive steps by which the States were brought to agree upon a general convention; and a study of the Monroe Doctrine as time and events have developed it.

$1.50 net. Postage 14 cents.

THE RUSSO-JAPANESE CONFLICT

By K. ASAKAWA

A brilliant account of the causes and issues of the present war, showing the diplomatic and economic factors which have brought Japan and Russia into conflict. Dr. Asakawa is undoubtedly the most accomplished Japanese student of Eastern Asiatic politics and history now writing in English.

With portraits and map, $2.00 net. Postage 16 cents.

NEW FRANCE AND NEW ENGLAND

By JOHN FISKE

The issue of this volume completes the superb illustrated octavo edition of Mr. Fiske's historical works of the history of the American Colonies. *Illustrated Edition.* Beautifully printed from new plates, and copiously illustrated with portraits, maps, facsimiles and other historic material. *$4.00 net. Postage 29 cents.*

Real Literature

COMPROMISES

By AGNES REPPLIER

"These essays are all graceful, light of touch, full of humor and wisdom; and they are, in the better sense, literature."—*New York Times.* $1.10 *net.* Postage 11 cents.

FAR AND NEAR

By JOHN BURROUGHS

"These observations of wild life around his cabin show that the dean of American naturalists is still in prime condition for observation."—*Boston Transcript.* $1.10 *net.* Postage 11 cents.

BITS OF GOSSIP

By REBECCA HARDING DAVIS

"Mrs. Davis has given us, in these human reminiscences, a little book that is sane and wise and cheerful, as well as entertaining."—*The Dial, Chicago.* $1.25 *net.* Postage 10 cents.

Inspiring Essays

ROUTINE AND IDEALS

By LE BARON R. BRIGGS

"The best thing education can do is to make moral character efficient through mental discipline, a theme Dean Briggs keeps in view throughout his book."—*Boston Advertiser.* $1.00 *net.* Postage 9 cents.

THE AMATEUR SPIRIT

By BLISS PERRY

"A wide human sympathy runs through the book, which shows a keen sense of the possibilities for happiness that lie in the spirit of the true amateur."—*Boston Herald.* $1.25 *net.* Postage 9 cents.

JOURNALISM AND LITERATURE

By H. W. BOYNTON

"Mr. Boynton discusses the tendencies of American literature with definite convictions, with a crisp mastery of style and a superior consciousness of quality."—*New York Times.* $1.25 *net.* Postage 10 cents.

Attractive Fiction

THE AFFAIR AT THE INN

By KATE DOUGLAS WIGGIN and others

"It is actual comedy of the most artistic sort and is handled with a freshness and originality that is unquestionably novel."—*Boston Transcript.* Illustrated. $1.25.

BIDDY'S EPISODES

By Mrs. A. D. T. WHITNEY

"The book is as bright as a dollar fresh from the mint, and it will not be long before everybody will be reading it."—*Boston Transcript.* $1.50.

THE PRIVATE TUTOR

By GAMALIEL BRADFORD, JR.

"As a first novel it is interesting, and is rich in striking characters. Its treatment is quiet, effective and workmanlike."—*Boston Herald.* $1.50.

Holiday Juveniles

WATERWAYS OF Westward Expansion

The Ohio River and Its Tributaries

BY

ARCHER BUTLER HULBERT

With folded maps.

12mo, cloth, uncut, gilt top. Price, $2.50 net, express prepaid.

In the "Historic Highways of America" series.

"Gives the clearest presentation of the development of river traffic from the few rude flat-boats of pioneer times to the enormous traffic of present days."—*The Independent.*

"An experienced worker in his chosen field, . . . we find Mr. Hulbert accurate and reliable."—*New York Evening Post.*

"Mr. Hulbert has evidently mastered his subject, and has treated it very ably and enthusiastically. History is too frequently a mere collection of dry bones, but here we have a book which, when once begun, will be read eagerly to the end, so vividly does the author bring scenes and personages before us."—*Current Literature.*

"The readable qualities of these monographs which give them the charm of story-telling is coupled with historical accuracy which make them the standard works on the subjects covered."—*The Chautauquan.*

THE ARTHUR H. CLARK CO.

CLEVELAND, O.

AMES'S TEXT-BOOK OF GENERAL PHYSICS

$3.50

This work provides a one year's course in physics which is well adapted for use in American colleges. The book states the theory of the subject so clearly and logically that recitations can be held on it. At the same time it gives a concise statement of the experimental facts on which the science of physics is based, and presents with these statements the accepted theories which correlate or explain them. Numerous references are made in the course of each chapter and at the end of the sections to the historical development of Physics, and attention is called to a few books of reference. Every experiment and observation which has an important bearing on our knowledge or theories of Physics, is mentioned and explained; and the few great Principles of Nature are given the prominence that they deserve. Numerous illustrations accompany the text. The work will take rank as a standard treatise on the subject, and should be in the hands of every student of advanced physics.

CAPE COD FOLKS

A TALE OF
NEW ENGLAND COAST LIFE
—BY—
Sarah P. McL. Greene
New Illustrated Edition

New portrait, 32 full-page and 25 vignette half-tone illustrations from original design by Clara E. Atwood and from photographs. Finely printed on Tileston & Hollingsworth English finish paper, emblematic cover design in gold and color.

"Precursor of many hundred stories of rustic life and character, "Cape Cod Folks" has remained deservedly popular through the more than twenty years since its writing.

"The present edition will especially delight all who are familiar with the picturesque beauties of Cape Cod. Its illustrations show to the life the distinctive features of that peninsula, both on sea and on shore, giving to Mrs. Greene's story a handsome and worthy setting."—[Boston Transcript.

Published by THE MACMILLAN COMPANY 66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, DECEMBER 1, 1904.

The Week.

Many Republicans of the "stand-pat" variety are complaining that President Roosevelt seems to be annexing the leading Democratic planks—tariff reform and others. He is in office, they mutter, but the Democratic policy bids fair to be in power. The complaint is exactly similar to that which Lord Salisbury made against Disraeli in 1867, when the latter not only took up the principles of the Liberals, in the matter of the extension of the suffrage, but went them several better. It was a betrayal of the Conservative party, Salisbury bitterly alleged, and he made ready, as Lord Rosebery said the other day, to abandon office and even public life. Yet seven years later he discovered his party stronger than ever for having adopted a popular policy. He entered the Cabinet in 1874 with his great political career all before him. Similarly, there will be Republicans to affirm that Mr. Roosevelt's espousal of tariff revision is little short of party treason; but in politics, too, "treason successful is no longer treason," and if the Republicans can reform the tariff next year, it may prevent their party being reformed out of power in 1908.

As a respite from the question, "Shall the tariff be revised?" some of the men who think it should not, have put out the challenge, "Who now has a right to urge its revision?" Congressman Babcock of Wisconsin, for instance, who has held his tariff reduction views in abeyance for something more than two years, is bringing them forward again. But the stand-patters immediately exclaim at such effrontery: "What right has Babcock to give advice to the Republican party when his plurality was cut down from 8,350 to only 385 in the year of a mighty Republican landslide?" But the man is no better off whose majority was increased—Mr. McCall of Massachusetts, or Mr. Burton of Ohio. Counsels of tariff revision are sheer temerity from them, too. What is your vote, asks the stand-patter, but a vindication of the way we have dealt with the tariff in the last four years? Or take the case of a defeated Republican like Mr. Eugene N. Foss. He is easily crushed, too. Would you dare to raise your voice for reciprocity when you have just been defeated after a fight on that very platform? So it goes all along the line. The high priests of Dingleyism are affecting a certain open-mindedness. "Of course, some schedules may need changing," they say. But no man, in their view, has clean enough hands to take the precious nursling out of the cotton wool in which it has so long been swathed.

Secretary Shaw advocates a general application of the principle of free raw material for exported manufactures. At present a tanner may get back the duty paid on hides if he exports leather. But he cannot claim the drawback if he sells the leather to a manufacturer who makes it up and exports it as shoes. Secretary Shaw would allow imported raw material of this sort to be treated in any fashion so it finally be shipped out of the country; that is indispensable. It never seems to occur to him that the spectacle of our factories selling at home at a dear price and exporting to foreigners at a cheap figure is not calculated to make the man in the street contented with the tariff. He will be told, of course, that by selling goods so low "abroad," we are really pauperizing the foreigner, and by selling him a cheap shoe branding him as a cheap man. Our humble consumer will be told also that to pay the high price when the foreigner gets the low price for the same article is merely "paying to ourselves"—a swift road to wealth. But such arguments will have to combat the base tendency to buy the necessaries of life as cheap as possible.

A stronger practical argument against the drawback plan—which theoretically, of course, we should welcome as a half-measure—is the difficulty of framing a workable law. The drawback allowed on shipbuilding material is, we are assured, of very little benefit to our ship-masters. Generally speaking, to keep records of such material is vexatious; inspectors are forced to take the word of the manufacturer or to go by mere rule of thumb. Of all methods of tariff reduction, it is the most complicated and cumbrous. If the friends of the tariff are really anxious to readjust it, they will look to reciprocity treaties as a convenient means. Reduction by treaty, being an affair of previous bargaining and *quid pro quo*, is the least contentious kind. The fact that the Senate has tabled treaty after treaty is an indication that it would not hear reason on the tariff. If a change of heart has indeed taken place, the best evidence of conversion will be the renewal of the Kasson treaties. To them should be added a reciprocity treaty with Canada. Sir Wilfrid Laurier is known to be in a receptive mood, and if Mr. Roosevelt has the zeal for tariff reform with which he is credited, he will not fail to seek a treaty either by reconvening the Joint High Commission or by direct negotiation with Ottawa.

Secretary Taft's first annual report is of the routine character to which we were accustomed before the days of Mr. Root. No one would glean from it that there are still urgent reforms needed before the army's modernization can be said to be complete. But this subject plainly does not as yet interest Mr. Taft. He contents himself with a review of our coast defences—now half completed as laid down by the Endicott board of 1886 and already largely antiquated. Not less than $110,000,000 has been spent upon this undertaking, and at least $65,000,000 more is needed. Mr. Taft also dwells upon the advantages of the recent elaborate manœuvres of the militia and regulars, although it is tacitly admitted in Washington that they are not to be repeated. Naturally enough, the Philippines come in for a good deal of attention in Mr. Taft's report. He notes primarily a falling off of five millions of dollars in the trade of the islands as reflected in the imports and exports. This Gov. Wright explains as being due to drought and locusts. If it is not one thing it is another; every year some such excuse has to be brought forward to explain the unhappy conditions which have existed since our military forces laid waste the islands. As was to be expected, he appeals for a substantial reduction of the tariff upon Philippine products imported into the United States. He would have all come in free save tobacco and sugar, upon which he would have imposed 25 per cent. of the Dingley rates. We hope that the Democrats, if not his own party leaders, will again pay no heed to the Secretary's request that the United States guarantee a 5 per cent. income on the bonds of new railroad companies in the Philippines for a period of thirty years. The proposal is vicious in theory, and would create a most dangerous precedent.

Gen. Chaffee's statement, in his first annual report, that "abundant proof of the wisdom of Congress in establishing the new corps [the General Staff] and prescribing its duties is found in its record of its first year's work," admits of no denial. But to demand that the Staff should already have achieved its maximum of efficiency would be to expect the impossible. Gen. Chaffee admits that "further experience may suggest advantageous modifications in the methods adopted." One of the changes which should be made is in the appointment of officers to the General Staff. At present it is a self-perpetuating body, or at least it is perpetuated

by the general officers comprising it. It would be far better if the selections were made by general officers serving with troops. The staff officers should also be kept in the closest possible touch with troops in the field. It has even been suggested that they should spend three months in every year inspecting posts and regiments. Gen. Chaffee does not feel that the time has come to recommend any additional reform legislation, although there is plenty of room for further changes. Perhaps the General Staff may arrive at a different conclusion within the next year. At any rate, it will find plenty of opportunity for brain work in puzzling out the reasons why desertions are so very heavy, and why all the prisons and guard-houses are filled to overflowing with our military criminals.

There is no reason to suppose that any human being regarded pension order No. 78, in advance of its operation, as a measure of economy, yet that seems to be the character in which it is now praised. So many of the clerks and medical examiners who formerly spent their time in sifting and rejecting applications can be dispensed with, now that a pension is granted on a birth certificate and an honorable discharge, as to save nearly as much as the famous order has added to the budget up to date. Commissioner Ware's advance estimates on the cost of the old-age pension seem to have seriously overshot the mark. During the closing months of the last fiscal year, only about $90,000 was added to the budget by reason of the order, and the 4,000 names added since June 30, supposing that the average is $8 a month, make only $384,000. To offset this, it is now said that within a short time the Pension Office will be able to dispense with about 500 clerks. If their salaries average $800, this will reduce the expense by almost as large a sum, even taking no account of the proposed reduction in the number of medical examiners. So, after all, it appears that the cost of this experiment is to be borne not by the generous and patriotic taxpayer, but by the poor and downtrodden Government clerk. We had always supposed that the Government's interest in him was of almost as paternal a nature as its care over the old soldier. Can it be that the obsolete notion of accommodating the force of workers to the work in hand is to be revived at Washington?

The places in the customs department which the President has just included in the classified service are precisely of the sort to which the application or extension of the merit system ought to produce good results. Nothing can improve the service more than the offer of some prospect of advancement to subordinates who are faithful and efficient. The discouraging feature of the civil service as a career is that, no matter what a man's ability may be or how generously his superiors acknowledge it, he reaches, after a few promotions, a point where, without political influence, he must stop short. Thus, the corps of consular clerks was established a good many years ago with a view to providing a sort of training school for consuls; but, as a matter of fact, only a few of them have ever become consuls, and some have remained $1,200 clerks for twenty years because a promotion, even if obtainable, would subject them to the vicissitudes of merely political appointees. The new order, which applies to 355 of the higher places in the customs department, ought to have a good effect on the whole service by increasing the number of places worth working for.

Since the city of Milwaukee voted on the question of a special bond issue for a municipal lighting plant, discussion has suddenly shifted from the merits of the scheme as a business proposition to the purely political questions of the meaning of the referendum and the duties of aldermen whose constituents have signified their wishes on a public measure. The vote for the lighting bonds stood 16,592 to 6,601. "The people demand that the plant be established," exclaimed its advocates at once. But their opponents rejoined that only about a third of the voters had expressed themselves at all on the subject, that on the same day nine other bond issues received popular approval. Last week, however, the Finance Committee of the Board of Aldermen, with the city comptroller and engineer, made a report on the "most urgent improvements" for the next two years. In this they included $400,000 for the lighting plant, $50,000 for an isolation hospital, and $200,000 for a bridge, postponing entirely the seven other improvements which the voters had endorsed. Now the papers are filled with speculation as to the attitude which this or that alderman may be expected to take on the roll call. Twelve aldermen on November 21 voted against the plant, and each one is daily reminded in black-face figures of the vote which his constituents cast the other way. Altogether aside from the purely business question, one would naturally expect to find a strong sentiment for municipal ownership in Milwaukee, where the Socialist vote on election day actually exceeded the Democratic.

Milwaukee's previous experience with municipal ownership, according to the *Sentinel*, an opponent of the lighting plant, has not been encouraging. A few years ago the city constructed a crematory for garbage at a cost of $60,000. This was opened in 1902, and, on the face of the figures, at least, has proved anything but an economy. Whereas the cost of disposing of 28,884 tons of garbage in 1900 was $64,998.01, it was $118,570.34 in 1903 for cremating 31,183 tons. Thus the cost per ton has been increased from $2.25 to $3.80. It appears that it takes twenty-one more men to run the plant than the contractors guaranteed would be sufficient, yet that the guarantee clause was so drawn that the city could not hold the contractors in any way. This discrepancy makes a difference of $10,000 a year in the running expenses. The location of the plant has made hauling such a heavy item of expense that the Health Commissioner recommends a new plant on another site to meet future needs rather than the enlargement of the present one. Some of these difficulties, of course, prove only bad handling of this particular experiment, but the result furnishes an effective argument for going slow in undertaking another.

New York's State Superintendent of Education, Mr. Draper, has decided views on the subject of football, and he communicated them to the Massachusetts Teachers' Association on Friday in vigorous language. After having had considerable experience with the sport, notably as president of the University of Illinois, Mr. Draper finds that it "breeds loafing, gambling, and drinking," makes neither for sound living nor educational effectiveness, encourages fighting instead of manliness, is too expensive, and "gathers more money than ought to be under the control of students." This is a pretty sweeping indictment of our pet game, which Mr. Draper, however, believes may yet be redeemed. He would reduce gate receipts, change the rules and "open up" the play, allow no one on the team who is not a matriculated student a year in residence, and have it understood that it is a crime to gamble on university contests. We must confess that we fail to share the Superintendent's belief in the desirability of all of these remedies. Decreasing the gate receipts would, in Massachusetts and New York at least, merely increase the crowds. A surer method of putting an end to betting must also be devised. The "opening up" of the game should come this winter, unless the football rules committee and the representatives of the leading universities are too timid to make sweeping changes or too indifferent to a rapidly growing public demand for a radical reform. It must be helped by the fact that this year's casualties are 14 killed and 296 injured. Had such losses been incurred in one battle in the Philippines, the public would have been much exercised.

Mr. E. N. Wrightington, head coach of the Harvard football team, has been

moved to make a long defence of his handling of the eleven. He explains, in the Boston *Herald*, that the lack of veterans and the numerous injuries received during the season were largely responsible for his failure to turn out a successful team. His chronicle of the injuries of his men is worth repeating, since it shows very clearly, coming as it does from one of the enthusiasts for the sport, just what the modern game may mean to participants: Captain Hurley, poisoned by dirt getting into a wound in his leg, and a sprained ankle; Montgomery, a badly twisted knee, laid up for three weeks; Brill, injured in a strength test in the gymnasium, and also in one shoulder on the football field; Meier, a bruised muscle on his leg early in the season, and an injury to the nerve of an arm which ended his playing; Derby, hurt in his shoulder on the second day of practice, and able to line up only five times before the Yale game, which he played with a bruised muscle. Oveson was out for a month with a twisted ankle, while Parker could not play for three weeks because of a "bad" ankle. Noyes suffered from nervous prostration. Kernan's injury was to his leg, and retarded his game two weeks. White and Mills were hurt on and off for a day or two at a time, and Nichols lost two weeks because of an injured shoulder. 'The only man," says Mr. Wrightington, "to go through the season *practically unhurt* was Squires." Could any opponent of football as played at present make a more damning presentation of the roughness and the needless dangers of the game?

Mr. Morley's parting speech on leaving the United States, was a defence of being on the losing side in politics. He confessed that, out of the twenty-two years during which he has given up to public life what was meant for literature, he has been for eighteen years in the minority. What an acknowledgment to make to an audience worshipping success! Yet Mr. Morley made it in the most debonair manner. He did not appear in the least to mind being "lonesome" in politics; and if Senator Depew had given him the good Republican advice to "get on the band wagon," he would, if he knew what that slang meant, have felt insulted. The satisfaction of having political convictions, and of standing by them whether they are voted up or voted down, is one which Mr. Morley has long enjoyed, and the praise of which in his public addresses in this country has a peculiar fitness for his American auditors. He has seen all his hopes and plans for Irish Home Rule go to wreck upon the intractable prejudices of the British electorate. He has withstood in vain the follies of English Imperialism. Against the Boer war he made his almost solitary protest, not only before it came, but all the way through, and got well denounced for his pains. Yet the man actually glories in his long list of lost causes! Of such vagaries is the philosophic mind in politics capable. Readers of Matthew Arnold's letters will remember how pleased he was at a message from Mr. Morley saying that he usually had a volume of Arnold's essays in his pocket when off on a political campaign. It looks as if the doctrine of "the remnant" had been his favorite reading. Yet there is nothing sour or pessimistic about it as he preaches it. In his own book on Compromise he quoted with approval the saying, "The history of success is the history of minorities."

What practical result will come of the meeting of zemstvo presidents is still uncertain, their programme being now in the hands of the Czar, who evoked the present evolutionary movement by his decree of March, 1903, portending greater religious toleration and increased powers for the provincial and local assemblies. Significant is the support that comes to the convention from proletariat reform clubs and socialist groups throughout the country—evidence that the demand for freer government is truly national. It indicates also that concessions by the Government would cut at the root of the revolutionary movement, for clearly many who are technically disloyal to the present order really prefer such gradual and lawful methods of agitation as are exemplified by the St. Petersburg congress. Abundant considerations urge a receptive attitude upon the Czar, and prompt concessions may be looked for. Already it is said that not merely a parliament, but a fully organized bi-cameral system is advocated. No very certain news of the feeling of the Czar is at hand. Meanwhile, one may choose between the rumors that he will make the nominal yet important grant of a voice (not a vote) for zemstvo delegates in the Imperial Council; or that he will appoint a committee to draw up a constitution.

M. Combes has been in the novel position of defending the right of the Gallican Church to its stipend under the Concordat. Certain over-zealous anti-clericals had desired to begin the work of separation by shortening the supplies this year. M. Combes's plea apparently rested not upon the equities, as it might have done, but upon the undesirability of making two bites of the Catholic cherry. He wishes to effect the separation of Church and State by a single law, and deprecates preliminary meddling by the Chamber. That he still is able to hold his Socialists in leash, his vote showed clearly. But, as the discussion of separation proceeds, the problem becomes more complicated. Other subsidized cults are alarmed at the threatened withdrawal of their subsidies. Already the Jews and the Protestants remind the Ministry that they will be seriously embarrassed if state aid is withheld. Then there is the especial problem of Mohammedan worship in French Africa, which is also subventioned. In fact, the manifold and delicate bonds that must be rudely torn whenever France departs from her historic policy, would deter any reformer less single-minded than the present Premier.

It is the fashion in Germany, even in the liberal press, to sneer at the sensational army novels of the day, whether written by Bilse, Beyerlein, or Von Baudissin. They are said to be no better than a *Tendenz-roman*, dealing with the fad of the hour, and too full of exaggeration to be trustworthy. But what one of these writers narrated a more incredible incident of militarism gone mad than is reported by cable from Dessau? There a court-martial has sentenced two soldiers to dishonorable dismissal and five years at hard labor for having struck and disarmed a drunken sergeant who wounded with his sword a woman whom they were escorting. If we may trust the press accounts, the court laid down the principle that subordinates may defend themselves from murderous attacks by a superior only by parrying a blow, not by returning it. As if to enforce this extraordinary teaching, the drunken rascal who caused all this trouble has been let off with three months' imprisonment with retention of rank. No wonder that the German press is reported, for once, to be excited on this subject.

When one reads further of the sentencing of a servant girl to three months in jail in Saxony for circulating rumors about the general character of officers of the Bautzen garrison, it is obvious that romancers do not need to fall back upon their own imaginations in order to obtain incidents for a three-volume novel. Indeed, we may yet see the publication of a 'Key' to Baudissin, or Bilse, after the pattern of the 'Key to Uncle Tom's Cabin.' To collect material for such a key one need only peruse the German newspapers, particularly the Socialistic *Vorwärts*. In one issue the Berlin *Tageblatt* tells of two non-commissioned officers who were found guilty of 313 instances of cruel treatment of subordinates. Two cases of soldiers who have committed suicide rather than stay in the service have attracted no little attention, while a dreadful case of crime and immorality in the barracks of a cavalry regiment at Mannheim has shocked all South Germany. Hardly a day goes by without such a story coming to light.

WHAT AILS AMERICA?

The appalling statistics of crimes of violence in the United States, collected by the Chicago *Tribune* and published with comment in the December *McClure's*, have provoked wide discussion. Those social philosophers who are ready to reform a commonwealth "while you wait" have proposed various remedies. One would rigorously punish corporate lawlessness, another would rouse public opinion against police blackmail. "Gentlemen in this respect," as Burke puts it, "will be led to their choice of means by their complexions and their habits." S S. McClure himself, one secret of whose success is a passionate interest in whatever he undertakes, would start a crusade for "a new righteousness which shall become a new passion—the Love of Country." The result, Mr. McClure is sure, will be "obedience to the law because it is the law; . . . and the briber, and the grafter, and the traitor who steals from his neighbors and pollutes the law will be unable to endure the scorn of his fellows." The London *Spectator* indulges in no visions of a millennium, but it hopes for blessed results from an improvement in the character and standing of American judges. It would give them larger pay and a longer tenure, so that they might scorn the power of our corrupt rich.

Before proceeding too far in this patriotic undertaking we shall do well to scrutinize the facts with some care. According to the figures, the number of murders and homicides in the United States was 1,266 in 1881, 10,652 in 1896, and 8,834 in 1902. That is, in 1881 the ratio of murders and homicides to population was one to 40,534 inhabitants; in 1896, one to 6,658; and in 1902 one to 8,955. We are now behaving better than in 1896, but we are yet more than four times as bad as we were in 1881. The first question is, Where do these figures come from? The answer is, "The statement of the number of murders and homicides includes all deaths by violence reported in the newspapers of the various States and Territories"; in other words, the value of the statistics depends, first, upon the accuracy and completeness of newspaper reports, and, secondly, upon the thoroughness of exchange reading. A failure in either point would vitiate the results. We hardly need to point out to any man who has been familiar with newspapers for twenty-five years, that the Associated Press and other reporting agencies cover the country far more completely to-day than in 1881, or even in 1890. In the South and West, particularly, the number of newspapers serving and served by the Associated Press has largely increased; the gathering of news by carrier, telegraph, and particularly by telephone, has been enormously extended, practically revolutionized. More than that, the plan of exchange reading for the Chicago *Tribune* must in the nature of things have developed in the last two decades. The readers have received more papers and handled them more skilfully. Doubtless, then, 1,266 is far below the total number of homicides in 1881.

But granting that the totals for the first decade of the Chicago *Tribune's* inquiry are a third below the actual fact, and that the country is not growing wicked so rapidly as might at first appear, the record is still black and damning. After all allowances and deductions, we must still admit that crimes of violence are increasing faster than the population. For some reason we are losing our respect for law, our self-restraint. In searching for causes Mr. McClure asks:

> "Can a body of policemen engaged in blackmail, persecution, and in shielding lawbreakers make a community law-abiding? Can a body of policemen engaged in criminal practices prevent others from committing crimes? Can a board of aldermen who for private gain combine to loot a city, govern a city well?"

He lays the blame in part on "saloonkeepers, gamblers, and others who engage in businesses that degrade; contractors, capitalists, bankers, and others who can make money by getting franchises and other property of the community cheaper by bribery than by paying the community; and politicians who are willing to seek and accept office with the aid and endorsement of the classes already mentioned." Possibly the operations of criminal rich and criminal politicians contribute to a general disregard for law that manifests itself in murder and homicide. *McClure's* has been printing articles that do not excite admiration either for the Standard Oil Company or for the bankers, bribers, and legislators of Missouri and elsewhere. Yet we doubt whether the knowledge that Trust managers are recovering a normal appetite in the stoneyard at Sing Sing, rather than on the golf links, would lessen the number of highway robberies even within sight of the University of Chicago; or whether final convictions of Col. Edward Butler and all of his friends would make life safer in the Mississippi Valley.

But the connection of murder with saloons, houses of prostitution, and gambling-hells is direct and conspicuous. Wherever the police or a political organization back of them affords protection to these agencies of vice, there we can expect nothing but an increase of crimes of violence. In so far as the corruption that festered in New York under the Administration of Van Wyck of odious memory has infected Philadelphia, Cleveland, Chicago, in so far the cause for which Mr. McClure seeks lies before the eyes of everybody. Although drunkenness, prostitution, and gambling, springing from weaknesses inherent in humanity the world over, are certain to be always with us and always fruitful of evil, there are three other causes which may, we trust, prove local and limited in duration, viz., foreign immigration, strikes, and race hatred in the South. From some countries we certainly get a class that is below the average in morals and intelligence, and until these newcomers have gone through our schools and learned our ways, we must expect trouble from them. The Sicilian brings here his feuds, and scarcely forgets them within a generation. Closely related to the immigration problem is the strike problem, with such lawlessness as spread terror in Pennsylvania in 1902 and in Colorado in 1904. A single great strike is enough in itself to raise the average of violence for the year, to say nothing of indirect effects. Most serious of all, however, is, in the South, the recrudescence of barbarism against which the best element in that region is now striving valiantly. In 1903 South Carolina was credited with 222 homicides out of 8,976 for the whole country; roughly, one-sixtieth of the population commits one-fortieth of the murders. No marvel that a Southern observer remarked that his region was becoming "accustomed to homicide."

BALLOT LAWS AND THE ELECTION.

The demand for better ballot laws which always follows an election is backed this year by an unusual amount of specific evidence about the effect of statutes carelessly or unscrupulously drawn. The principle of the secret ballot is very generally accepted, though it is not yet everywhere adopted. The needful thing now is to study after each election the workings of the various laws at present in force, with a view to finding out just how this detail or that has affected the real purpose of all balloting—the accurate registering of what the voters really want.

After assuring secrecy and a fair count, the great desideratum in ballot reform has been to give the voter a fair chance to make his selection independently for the several places on the ticket. Massachusetts does this, after the fashion of the Australian commonwealth from which our ballot was borrowed, by requiring a separate marking for every candidate voted for. Thus the hidebound party man was compelled to expend just the same amount of effort in voting as the eccentric who supported Roosevelt, Douglas, a Prohibitionist for the Legislature, a Populist coroner, and a Socialist Congressman. Of all ballot laws in the country, this is the one which is supposed to put the greatest premium on independent voting, and it is true that it enabled the voters this year to choose a Democratic Governor and Republican electors; yet the same result was attained in Missouri under a statute which, perhaps, makes the vot-

ing of a split ticket more difficult than any other in the country. The Missouri farmer who voted for Folk and Roosevelt had to select from a bundle of long, narrow ballots handed him at the polls the one bearing the Republican label, and then, finding the appropriate space, cross out the name of Walbridge for Governor and write in that of Folk. When the voters, East or West, have made up their mind to stand by a particular combination of candidates, they will do so, whether the law makes it easy or difficult.

Aside from the State and national tickets in Massachusetts, the official returns there show some rather curious results. For instance, in the Eleventh Congressional District, where Eugene N. Foss and John A. Sullivan were making a campaign of exceptional activity, there were 2,500 voters who voted for neither one, and left that part of the ballot unmarked. Meanwhile, in the Eighth district it is estimated that 40 per cent. of the Democrats, who had no candidate of their own, took the trouble to vote for Mr. McCall. Likewise several thousand voters expressed no preference for President while voting for Governor.

The laws of most States, New York among them, assume practically that, when the voter does not know or care about the nominees for a minor office, it is as well to encourage him to plump for the candidate of his own party. It is a safe assumption that most of the 2,500 Boston voters who declined to choose between Foss and Sullivan had voted for Roosevelt. Under our law they would have been counted for Foss. The proposition that they should have been might be defended on the ground that, when the voter has no preference to the contrary, he naturally wishes a Congress to be chosen in harmony with the President he has helped to elect. That is the best that can be said for the theory of the party column.

Maryland and Pennsylvania furnish two examples of laws passed for a bad purpose which have almost ludicrously defeated the popular will in the present election. The so-called "trick ballot law" of Maryland did not accomplish the defeat of Congressman Mudd, who actually established schools to teach the ignorant negroes how to mark the ballot correctly, but it did divide the State's electoral vote—a result which no one intended. Mr. Bonaparte, Republican, was chosen with seven Democratic electors, and his lead over the second Republican on the list is considerably larger than that of Brown, who headed the Democratic column, over the second Democrat. He had a larger vote than any other elector, and apparently more voters tried to vote for Roosevelt than for Parker. But more Republicans than Democrats erred in cross-marking. In a vote of about 106,000, the difference between the highest and lowest elector on the Democratic side was more than 4,000. Even in New York, the first elector on the list always runs a few score ahead of the last, owing to confusion of the space opposite the first name with the straight-ticket circle. In Maryland, the ignorant voters found the ballot a hopeless puzzle, and thousands of them solved it wrong. "The Democratic party in this State," says the independent Baltimore *News*, "naturally contains a preponderance of the best elements in our citizenship; but it is precisely these elements that are alienated by offences against the principles of fair play in elections."

The ballot which the Pennsylvania machine invented would have had as bad results had there been any approach to equality between the two parties. There is a square at the left hand end of the ballot in which a full straight ticket can be voted, and another square at the head of the party column by putting a cross in which all the thirty-four electors may be voted for at once. The Philadelphia *North American* reports that from 5 to 20 per cent. of the voters throughout the State mistook this electoral square for the regular party square. Moreover, as in Maryland, so many voters thought the square for the first elector was the straight-ticket square that the first elector will have more than 500,000 plurality, thousands above that of his colleagues. "Independence continuing to flourish," says the *North American*, "the ballot manipulators seem to have lost their heads. Their latest efforts to complicate the election machinery have produced a ballot so puzzling as to discon-cert even their own trained voters—a ballot which, if not reconstructed on sane and honest lines, will involve certain defeat for many local Republican tickets in the next close campaign."

Only one objection of any validity has been made to the operation of voting machines, namely, that it is sometimes possible for a sharp-eared party watcher to tell by the sound whether split or straight tickets are being voted. Even that does not hold when a ballot similar to that of Massachusetts is used. But there is no better argument for machine-voting than the story of the Indiana Democrats who scrawled the word "Bryan" across their ballots, and thus invalidated them in a futile protest. In a similar way many voters whose intent was unmistakable lost their votes in our municipal election three years ago through their irresistible impulse to write uncomplimentary remarks about the "Iceman" on their ballots.

FOREIGN VOTERS IN NEW YORK.

Just before sailing for England, Mr. James Bryce publicly bore testimony to the intelligence and sobriety of the foreign voter in the United States. Mr. John Morley, after spending a few hours in the Chicago election booths, was similarly impressed. The mere intricacies of the ballot, he said, would seriously tax the average English elector. These opinions are valuable at a time when our foreign-born population is coming in for a good deal of criticism. The growth of immigration from Southern Europe has revived something of the old Knownothing spirit. Word comes from Washington that Commissioner-General Sargent has collected damaging evidence against Jewish and Italian immigrants, on the strength of which the Lodge bill, enforcing an educational test, may be urged again.

A good test of fitness for citizenship is the intelligent use of the franchise. New York city is an excellent field for study, as our population is largely of foreign stock. In testing the intelligence of foreign voters, two points should be kept in mind: We should inquire, first, the extent to which they exercise the suffrage; and, secondly, whether they are slavishly bound to one party. In the first respect, the districts of New York where foreigners are most numerous acquit themselves at least as creditably as those where native blood predominates. According to the latest Federal census, the percentage of the foreign-born population of Manhattan Island is 42.7. At the recent election, the average percentage of absentee voters—that is, those who registered and then stayed at home—was 6.3. On the whole, these indifferent citizens were about equally distributed between the foreign and the native-born. In fourteen Assembly districts, in which the foreign population averages 51 per cent., the stay-at-homes averaged 7 per cent. In twenty districts in which the foreign population averages only 33 per cent. there were a few more of them, or 7.3. The district in which there were the fewest absentees — the Thirty-third, where only 3.5 per cent. kept away from the polls—is 44 per cent. foreign, or above the average. The next best showing is that of the Eighth, which is the most densely populated foreign district, its percentage being 67 per cent. Here only 4.6 of the registration was missing on election day. The most discreditable showing was made by the Thirtieth, where 14.2 of the registered voters did not go to the polls. This is only 38 per cent. foreign, or four points below the average. In the most representative "American" district, the Twenty-third —where the population is only 28 per cent. foreign—the absentees were 6.5, or slightly above the average. In such "kid-glove" sections as the Twenty-fifth and Twenty-seventh, the stay-at-homes were 8 and 9 per cent. To the Twenty-ninth, however, should be given more credit, for here only 5.6 per cent. failed to cast their ballots.

It is clear, then, that our Jews and

Southern Europeans do vote. A more important question, however, is whether they vote with discrimination. Do they always support the same parties; do they ever vote split tickets? A study of the returns for the last four years—including those for the November elections—shows that there are only eight Assembly districts in Manhattan which, in both local, State, and national elections, do not invariably go one way. They are Manhattan's "doubtful districts," which are apparently influenced by argument, and which may be expected to split their tickets. They are the Fifth, the Eighth, the Tenth, the Sixteenth, the Twenty-first, the Twenty-third, the Twenty-ninth, and the Thirty-first. Some of these are only slightly independent; the Twenty-ninth, for instance, gets into this good company simply because, this year, it voted for Roosevelt and Herrick. The average foreign population of these independent districts is 42 per cent., or just about the average for the whole island. Chiefly important, however, is the fact that this list includes the Eighth, the Tenth, and the Sixteenth Assembly districts. These are also situated south of Eleventh Street and east of the Bowery.

By all odds the most interesting is the Eighth. This is the district with the largest foreign population, and its population is very largely Jewish. It has such well-known Ghetto streets as Hester, Delancey, Eldridge, and Allen. Yet politically it is one of the most uncertain sections; the majority of the winning candidates is always small. It voted for Bryan in 1900; for Roosevelt in 1904; for Coler in 1902; for Higgins this year. Its representative at Albany is alternately a Republican and a Democrat. The Tenth District, which also shows unmistakable signs of independence, is strongly Jewish. This year it voted for Roosevelt and Herrick. The Sixteenth, which also divided on State and national lines, is populated almost exclusively by Jews from Austria-Hungary. Similar independence is evidenced in districts largely native, such as the Fifth, the Twenty-first, and the Twenty-third; but at least it is plain that the Jewish localities, chiefly recruited from immigration, are not lacking in the first essentials of good citizenship. The bulwark of the unswerving Democratic vote in Manhattan is indisputably foreign; it extends all the way up the East Side to One Hundred and Twenty-ninth Street, east of Lexington Avenue, and up the West Side, west of Seventh Avenue, as far as Sixtieth Street. But these are the great Irish and German strongholds—races whose adaptability to American conditions is no longer in dispute.

THE PRODIGY OF LAWSON.

The articles on "Frenzied Finance" which Thomas W. Lawson, his eye in a fine frenzy rolling, has been printing in a magazine, have become a literary and social phenomenon of extraordinary interest. They are devoured with avidity in all parts of the country. Go into the backwoods of Michigan, and the first question you will be asked is, "Have you read Lawson's last article?" Look out of the car window when the train stops for water in Arizona, and the inquiry will be fired at you by a native, "What do they think of Lawson in New York?" In sage-brush and mining camp, as well as in brokers' offices and Old Ladies' Homes, Lawson is the chief purveyor of matter for reading and infinite gossip. If Macaulay supplanted with his history the latest novel on the boudoir table, Lawson has displaced the sensational prints and the flashy journals in barber shops and bar-rooms, penetrating to the lowest stratum of readers as well as piquing the curiosity of the highest, and making of himself in a few months a veritable literary prodigy—or terror.

Yet this effect defective comes by cause. Lawson's tremendous audience so suddenly acquired, his clean sweep of the field, should not lead professional writers to renounce a craft in which any upstart may appear and carry off the laurels. The wonder is explicable. Lawson has taking literary qualities. Leaving out the prime requisite of truth, which is neither here nor there in his articles, he has nearly all the elements which the big-wigs declare necessary in a popular style. His frank and pungent slanginess is the precise medium for his tale. It yields a splendid touch of verisimilitude. Then he abounds in minute detail. Defoe did not surpass Lawson in the art of buttressing incredible romances with an amount of apparently veracious incident which makes unbelievers ashamed of themselves. The close observer who noted an angry magnate's eyes pass through all the colors of the spectrum cannot be altogether wrong, one feels, in his exact account of millions stolen. Lawson is also overwhelmingly concrete. Names are blurted right out. Places and dates are set down with the accuracy of extracts from a detective's note-book. A society novelist could not exceed him in faithful description of the surroundings of his criminal millionaires. He is highly dramatic, too. None of the tedious *oratio obliqua* for him. Everything is in the first person, or direct discourse. His articles bristle with quotation marks, and racy dialogue fills his pages. Neither Aristotle nor Horace, Quintilian nor Sainte-Beuve, could have laid down more infallible rules for attaining immense literary vogue than those which Lawson has found in his mother wit.

To so lucky a style, Lawson has added the further advantage of a theme which ever lies near the heart of the masses in a democracy. Vast wealth is the subject of his story; and the editors of popular magazines long since discovered that no topic is dearer to the great body of ten-cent readers. An account of "How the Crœsuses bring up their Children" will be read with eagerness in hundreds of thousands of poverty-stricken homes; while a huge edition will be carried off by an article, supposed to be a solution of the servant problem, on "Mrs. Fitzboodle's Eighty Servants, and How She Manages Them." We do love a lord, but even better love a multi-millionaire. As Talleyrand found out that the most interesting man in this country, to judge by the way rumor and small talk played about him, was the rich Robert Morris of Philadelphia, so ever since has Dives been a national admiration. President Roosevelt, in his sermonette of Tuesday week, spoke of "the brutal envy and hatred felt by a poor man towards a rich man"; but our observation is that gaping curiosity, fathomless toadying, and silly aping make up the commoner attitude of the poor in the presence of those having great possessions.

With a subject thus as broad as human folly, Mr. Lawson has also the good fortune of being able to add crime to great wealth. If the very rich are interesting *per se*, the criminal rich are doubly fascinating. And Lawson pitched upon a public predisposed to believe. The sublime fervor of faith is nothing to the credulousness of a loser in Wall Street. *Credo quia impossibile.* Thousands all over the land had been bitten in the financial operations which Lawson professes to describe. They knew that it was through no fault of their own. Every innocent who "takes a flyer" in a blown speculation is certain that his own judgment is excellent, his financial shrewdness beyond dispute, and that nothing but the machinations of wicked men could have parted him from his money. Lawson shows him the millionaire schemers at their nefarious work. The victim pores over the story of the unscrupulous manipulation of stocks and the heartless fleecing of investors, and takes comfort to his soul. Now he sees it all. He was taken in by a set of villains. Thus, besides the agreeable fillip to a morbid imagination which Lawson gives in his narrative of crime in seven figures, he makes his appeal to the multitude which no man can number of luckless investors and ruined speculators. In such circumstances, instantaneous literary fame and circulation above 600,000 are no longer a mystery.

The serious part remains. Mr. Lawson may be the most prodigious liar that ever put pen to paper. His lies may be like the father that begat them—gross as a mountain. That is not the thing which really signifies. People do not greatly care whether his particular

stories are true—whether this and that plunger in the market actually played the infamous part alleged; whether brazen promoters really bought a legislature in the way described; they believe that other stories of the kind are true, if Lawson's are not. He gains the credit of a millionaire turning State's evidence. The impression made is as unmistakable as it will be indelible. That there is a class of rich men who carry into enormous operations the methods of the sneak thief and the card sharper; that they rob the widow and take away the portion of the orphan with no more scruple than a burglar; that honor and good faith are as unknown among them as among jail-birds—this is the popular conviction upon which Lawson has so skilfully played. He has heightened it, but he did not create it. Now the existence of such men is the great social menace. They are the blackest embodiment of that spirit of materialism which fears not God and regards not man, and which it is our immense task to-day to resist and drive from us, if we would not see it drag our whole civilization into the pit.

ANOTHER NAVAL WAR.

The marine architects and engineers in annual conference in this city a fortnight ago almost came to blows over the question whether the modern battleship should be a Noah's Ark crammed with all kinds of machines and mechanisms, or revert to a simpler type. The proper answer to this problem is, however, of trifling importance in view of the terrible feud which has broken out again among our naval defenders resident in Washington. The Line and the Staff, enemies ever since the first marine engines were installed on an American warship to destroy the romance of the winged cruisers of Cooper's day, are at each other's throats again, because of an issue not merely of national but of international significance.

Rear-Admiral Upshur, who has danced and led more cotillons at Bar Harbor and Washington than any other man of his age (not excepting Henry Gassaway Davis, lately of West Virginia), is the officer who has performed a great public service in unearthing one of the lowest and most discreditable schemes to disgrace the navy within our recollection. He discovered Civil Engineer Asserson using a visiting card inscribed "Rear-Admiral, United States Navy," and at once performed his duty by preferring charges against Mr. Asserson of "conduct unbecoming an officer and a gentleman, and of conduct to the prejudice of good order and discipline in violation of law and of the navy regulations." This only half begins to describe the enormity of the civil engineer's offence. The real, Simon-pure rear-admiral is he alone who treads or trod the quarterdeck, and bore or bears upon his shoulders the responsibility for the condition of his men's clothes, the table manners of his officers, the navigation of the ship, and the safety of the nation. Your builders of battleships, your engineers who lay out a grimy dockyard, may be all very well in their places, but when compared to a real and salty admiral they are but as cub reporters to our Richard Harding Davises.

Undoubtedly, staff officers have their uses; nautical engineers are needed, at times, and so—on pay days—are paymasters; medical men, too, have been known to come in handy in tropical climates; even a marine officer may be admitted to have some excuse for existence now that he has become more of a bluejacket and mans the main batteries, and is by so much less a soldier. Moreover, the marine officer is content with his own designation, but the trouble with the Staff is an insane desire to borrow, beg, steal, or appropriate the titles which have belonged for centuries only to the naval "men who do things." To have paymasters and doctors signing themselves as captains and rear-admirals is bad enough, even if they have been to sea. But the service is certainly "going to the dogs" now, if every mere civil engineer who for a brief space has had the pay and relative position of a rear-admiral is going to pass himself off for a bona-fide, timber-shivering, trouser-hitching, and powder-reeking man of war, quite as capable of leading a ball as stopping a bullet. How, indeed, can your fighting officer hereafter impress either a social assembly or his fellow-sailors if every doubting Thomas may stop to inquire whether the distinction accorded him was earned on the quarterdeck or in the hold? Manifestly, all respect for authority is at an end if this state of affairs is to continue. Marryat's famous ship's carpenter, plain Chucks, became Count Schucksen and commander of a Swedish frigate because he was left in the enemy's hands apparently mortally wounded with a captain's epauletted coat to cover him. But as long as Admiral Upshur stands like Horatius to guard the navigating bridges from the invasion of those who would disguise their second-rate activities under falsely assumed cloaks of authority, the navy's honor is safe.

In Germany they have severely punished an officer for sarcastically describing his comrades as "First-Class Beings." But who can doubt that our fighting naval and military officers deserve this appellation? They themselves are under no illusions on that point. It was the wife of a colonel who assured us that the only genuine aristocracy in this country comprises the officers of our army and navy. Naturally, this aristocracy, like all others, must fight to keep itself from contamination by unworthy intruders. It was bad enough when Congress a few years ago allowed the ships' engineers to crawl out of their stoke-holes, abolished their titles, and gave them genuine rank and powers of command. This large increase of our true aristocracy was acquiesced in with much the same feeling with which the English families patented by William the Conqueror receive the latest tea-baronet created by a grateful king. But our Annapolis-trained navy officers have never resigned themselves to that law of a barbarian Congress which decrees that as many as twelve gunners, sailmakers, bo'suns, machinists, and other graduates of the forecastle may annually be commissioned as ensigns and put in line for advancement to the halo of a rear-admiral—and not merely of a rear-admiral of the junior but of the senior grade.

Plainly, the time has come to make a stand. Our sixty-seven retired rear-admirals—old sea dogs who served with Farragut every one—and their embittered wives are solidly lined up behind the flag and Upshur; the same Upshur who first donned a midshipman's uniform sixty-three years ago last month. Aided by five commodores and dozens of veteran captains and commanders, they are advancing upon the medical and pay directors, the chaplains, the professors of mathematics, and the civil engineers who would make an actuality of what is merely an imaginary rank. Their superior knowledge of fleet, squadron, and division tactics will, we doubt not, bring them to victory at the doors of the White House. But whether they succeed or not, they are contending for a glorious principle. They are once more reminding a sluggish, peace-loving people that actual titles are the *summum bonum* to be sought in a democracy; that it is rank, not services, which counts, and that the defender of the nation is an abject, spiritless apology for a man if he does not carry himself as one of a class set apart from the common people by the blue of his clothes and the glitter of his epaulets.

A MUSEUM AUXILIARY.

While art-lovers are congratulating each other upon the election of Mr. Morgan to the presidency of the Metropolitan Museum, it will have occurred to many that the uneven development of that great institution in the past has been due in part, at any rate, to lack of an effective public opinion supporting the trustees. Mr. Morgan's unusual qualifications, both from natural taste and varied experience, will doubtless be directed towards popularizing the work of the Museum. Meantime, we have the anomalous condition of a city containing many connoisseurs and patrons of the arts who have practically no relations with its chief art institution. Thus the Museum has been bereft of its nat-

ural aids and counsellors, and the burden has fallen too heavily upon a devoted minority of a board, the majority of which had no especial competence in matters artistic. As a result, deplorable but natural, those who should have been most loyal to the Metropolitan have too often been its distant and not very friendly critics.

Happily, the time is ripe for a change. One may count upon Mr. Morgan for such liberal and enlightened conduct of his trust as to win the confidence of his fellows in the love of art. But much might be done by a proper organization of the friends of the Museum. At present some of them, far too few, are annual subscribers. Such members receive certain courtesies and privileges in the way of free entrance, etc., but they have no way of being heard in the management. In other countries, auxiliary societies have been formed which bring together the connoisseurs and amateurs of a nation in aid of its galleries. On this matter Mr. Hermann Paull writes interestingly in the November *Fortnightly Review*. The first auxiliary, it appears, was founded at Amsterdam in 1883, in order to keep the De Vos collection in Holland. But the organization was continued, and the society has subsequently added many notable objects to the Rijks Museum. About six years ago the Société des Amis du Louvre paid the greater part of the price of an extraordinary Baldovinetti, and has made other important gifts. The Berlin Society, of more recent date, has had even more striking success. Through its advice and with its aid pictures by Jean Fouquet, Van Eyck, Memling, Rembrandt, Holbein, and Guardi have been acquired for the already rich gallery on the Spree. Last of all, in England, the National Art-Collections Fund has been started under distinguished auspices. Such societies generally exact a very modest annual contribution of their members, and, practically, they are the intermediary between wealthy givers and the museums.

Probably few sympathetic tears are shed over the pathetic case of open-handed but uninstructed millionairism; yet it is easy to see that where a somewhat haphazard liberality is common, an authoritative body that will indicate possible gifts and guarantee their value and their welcome is not without its uses. An important element in the work of such a society is coöperation with the Museum authorities. It does not press donations ill-advisedly, but by consultation learns the needs of the situation. Ordinarily, indeed, the auxiliary society buys in conjunction with the Museum, eking out its funds where they are inadequate. This introduces a very welcome flexibility, for it allows the curators to take advantage of such exceptional opportunities as may occur, and it enables a single department to make timely purchases, such as even a prosperous department cannot ordinarily afford without deranging the general budget.

A very valuable feature of such coöperation is the effect upon the Museum staff of a body of keen yet friendly criticism. This makes against the deadening bureaucratic tendency that so frequently overcomes directors and curators. To such officials it is a very wholesome stimulus to know that their work is scrutinized closely by experts, and such surveillance loses its sting when it is exercised by those who do it by right of helpfulness in the past and desire to aid in the future. It would be short-sighted, then, to measure the usefulness of an auxiliary society simply by the objects of art it is instrumental in securing. Quite as valuable to a museum must be the constant interchange of suggestions, and the sense that organized and influential opinion applauds every improvement. Such volunteer organizations have even shamed the parsimony of governments, as when the Berlin "Kunstfreunde" paid £30,000 for the two Van Dycks in the Peel collection—knowing the opportunity was unique—and were afterwards reimbursed by a special vote of the Reichstag.

It might be said that the Metropolitan Museum, with more than $200,000 annual income for acquisitions, is beyond the need of such assistance. But, first, no museum can be so rich as that, and, next, the directive value of such a fund would be out of all proportion to the money contribution made. For directors, and even trustees, have their idiosyncrasies. It was understood, for example, that the late General Cesnola, an enthusiast for classical antiquity, fairly grudged all money spent for objects of the Christian era. However that be, outsiders frequently see the gaps in a collection better than its curators. At present, for example, it is amazing and most unfortunate that the Metropolitan Museum has but a handful of good examples of the Italian school of painting. Its agents should to-day be scouring Europe to bring together at least a few representative panels before it be too late. A society which could give not only good advice, but a money contribution, to this cause would hardly fail to get a respectful hearing. In fact, there are a hundred and one ways in which the art lovers of the town so leagued together might substantially further the growth of the Museum—might liberalize and democratize its policy, without in any way impairing its present admirable organization.

THE NATIONAL ACADEMY IN NEW YORK.

NEW YORK, November 23, 1904.

The meeting of the National Academy of Sciences last week was not as well attended as one might suppose that a session at Columbia University would be. The hall is one in which few speakers can make themselves heard even in the front row. The programme was not long; a large proportion of the papers were "read by title," and nearly half the rest were by men not in the Academy. Such as were read were hurried through—naturally enough, under the circumstances—although some of them would have been of unusual interest, could they have been listened to with ease.

The scientific session was opened by Dr. Louis Agricola Bauer, one of the savants of the Coast and Geodetic Survey, and one of the very few masters of all that is now known concerning the earth's magnetism. He was introduced to the Academy by Professor Woodward. In a memoir of the good old solid sort that has given the Survey its renown, he explained an analysis of the forces which cause the secular variation of the earth's magnetism. The results, which seem to be irrefragably proved, are of a kind to stimulate curiosity not a little. How the earth ever came to be magnetized, we do not know. It seems that although the earth is in a certain measure an electromagnet, yet it is mainly a permanent magnet; and in the remote past something must have occurred to render it so. Dr. Bauer expressed a confident hope that the series of investigations which he is conducting with the support of the Carnegie Institution will afford evidence concerning the when and how of that event. Certainly, much the larger part of the forces causing the slow westward drift of the magnetic lines was shown by him to act within the earth's surface. Several unexpected features of these forces were pointed out; but the most startling of them is that for the last three hundred years, at least—that is, for as far back as the history reaches—the earth's magnetism has been steadily diminishing at such a rate that, if something does not check the drain (and no cause for such check is known), we shall wake up some fine morning in A. D. 3500, or thereabouts, to find that the magnetism of the earth has all been spent and gone. Dr. Bauer seemed to the reporter rather concerned lest the newspapers should give a sensational turn to this result. He declared that he did not believe it would ever really come to that; but one does not quite see what a geophysicist has to do with any emotional aspect of his results, one way or the other. We know that the earth is cooling. It is possible that something may occur to restore its heat, just as it is possible that something may occur to restore its magnetism. But its cooling is positive fact, while any restoration of its heat is pure fancy, with which the physicist, as such, has nothing to do. It is not easy to see how the case of magnetism is essentially different.

A paper of great elegance, presented with admirable perspicuity so as to engage the interest of every hearer, and, though involving no new principle of science, yet important in more than one way and especially as a precious augmentation of the resources of physical experiment, was by the well-known Professor Pupin, who was introduced by Professor Woodward. The object was to show how to produce impulses at equal intervals of any desired length, in the neighborhood (say) of a hundred-millionth of a second. The method is founded upon the

use of that sort of electrical conductor of Professor Pupin's invention in which there are many small coils of wire, each terminating at either end upon plates, a plate of one coil being separated a little from a parallel plate of the next coil, so as to bring all the coils into a linear series interrupted between every two coils. Such a conductor may be constructed so that a current will pass through it in any desired interval of time (within limits); and the rate of propagation is absolutely uniform from coil to coil, as Professor Pupin demonstrated. Supposing, then, a chain of a hundred coils is passed over by the current in a millionth of a second, the interval between the passages to consecutive coils must be one hundred-millionth of a second, precisely. Now Professor Pupin proposes to attach secondary coils to each of the coils of the chain, in each of which an impulse will be produced by the entrance of the current into its primary coil, and these impulses can be utilized in any way desired. The mere ascertainment that one could thus actually produce distinct impulses at certain excessively short intervals, even if no limit were reached, would be of interest; and it might happen that there should be found to be an absolute limit, which would be a matter of still greater interest. At present, some metaphysicians, like Kant, believe that there are no instants in time unless some instants are marked by some event, while the majority of those who have considered the subject believe that every interval of time consists of an infinite multitude of instants as distinct as so many grains of sand, although no two are consecutive. But some of the most accurate thinkers in the world, such as Mr. F. W. Frankland of Wellington, New Zealand, son of the great chemist, are of opinion that in a finite lapse of time the multitude of instants is finite. Those thinkers may be right; their arguments have not been absolutely refuted. There is, therefore, a possibility that there is some limit to the subdivision of time.

Prof. C. S. Hastings of Yale gave measures and calculations showing for the first time the dispersive power of the human eye. Helmholtz assumed that it was about the same as that of water, but Professor Hastings showed that it was intermediate between the dispersivities of flint and crown glass, and about that of oil of turpentine.

Two interesting biological papers were, the one by Dr. T. H. Morgan, who was introduced by Prof. E. B. Wilson, the other by Professor Wilson himself. It was not the only interesting paper by Professor Wilson, but these two, given consecutively, dealt in part with the same subject, and reached conclusions which, in expression at any rate, were somewhat conflicting. Dr. Morgan's paper related to organic polarity. He showed that, from individuals of all branches of the animal kingdom, it is possible to cut off pieces and have new parts grow out to replace the loss. Thus, taking a certain species of worm, if the individual was cut in two anywhere behind a certain point, a new tail would be grown upon the part containing the head, while if the section was made forward of that point, a new head would be grown upon the tail-piece. Not only that, but, after the former section, the piece of tail cut off would grow a reversed tail upon its forward end, and, after the latter section, the head-piece would grow a sort of reversed head upon its posterior wound. He showed that something similar followed when a limb of a suitable animal was severed in two places and the middle piece was replaced in a reversed position. That is, the foot, or whatever the terminal member was, would be reproduced equally from either end of a piece of the limb. Dr. Morgan had further made longitudinal sections of certain animals with results conforming to the same rule. But no attempt can here be made to explain the formulation of certain German biologists as to the propriety of which the two learned gentlemen were in disagreement. It did not seem to be a very deep separation of opinion.

Professor Wilson further read a paper by one of his students, Mr. Yatsu, about centrosomes. Everybody who interests himself in any branch of natural science has heard of the famed experiments in which Professor Wilson produced these evidences of the power of cell division by subjecting the cells to osmotic pressure. An objection was raised to the conclusiveness of that experiment on ground that the centrosomes which Professor Wilson made to appear might have existed already unseen in the cell. But since that would be the case only if the egg had been fertilized, Professor Wilson has ever since, he told the Academy, been engaged in a quest for a female of the species used containing a ripe egg. His luck, however, was bad, and that of his student, Yatsu, was good; so that it was to the latter that the lot fell. The cell contained the usual sole centrosome beside the nucleus, and, at Professor Wilson's suggestion, was most skilfully cut in halves by Mr. Yatsu so as to leave centrosome and nucleus in one half. This cell, then, could not have been fertilized in the usual way; but, upon being subjected to higher osmotic pressure, there soon appeared many little stellated bodies in it recognizable as centrosomes, and thus the discovery of Professor Wilson is freed from its last blemish. Professor Wilson's style of presenting his papers is simple and elegant in a very high degree. His voice, of penetrating depth, is so soft as not to be heard in the resound, while his enunciation is so perfect that he can be heard when nobody else can be heard. The only complaint that carping envy could conjure up would be that he is so cool; and this last infirmity disappeared when he told of the result of Yatsu's performance.

Mr. C. S. Peirce of the Academy occupied a good deal of time in sketching the contents of a memoir upon Topical Geometry. Topical Geometry is that kind of geometry which considers the motions, not of rigid bodies as elementary geometry and, indeed, metrics generally do, nor yet those of the shadows and rays of light of projective geometry, or graphics (which are such that if they are straight or flat at any one instant they are so at all instants), but of fluid objects which can bend and twist and, without being elastic, can be contracted or expanded in whole or in part in any desired way, the only restriction being that they shall not be ruptured or welded unless at specially designated instants in determinately described ways. Mr. Peirce remarked that this condition of preserving the connection of parts belongs to vacuous space itself, while it is demonstrable that these properties of space which are investigated by metrics and by graphics have nothing corresponding to them in vacuous space itself. Accordingly, Topics, or topical geometry, is alone the science of space itself, and all graphics, and *à fortiori* all metrics, can be regarded as a special problem of topical geometry. The most important part of the little known-about Topics is due to Listing, who first distinctly conceived the chorisy, cyclosy, periphraxy, and apeiry—that is, the numbers respectively of separate pieces, of rings, of sacs, and of solid regions that cannot shrink to nothing—and who first gave the census-theorem to which these four numbers ("Listing's numbers") are subject.

Mr. Peirce, in addition to revising Listing's work, has added the conception of topical singularities, or places within places, from which former places bodies can, while remaining in the latter places, move away in fewer or more numerous ways than from any other places in their neighborhood. He has enumerated all the singularities that can exist of three-dimensional spaces, and has given rules from which all problems of map-coloring can, for the first time, be demonstrated and readily solved. He further professes to demonstrate that not a single one of the proper theorems of Topics (that is, none that is more than a property of a lattice) can be demonstrated without virtually assuming that space is not only continuous in such a sense that rational numbers do not suffice for discriminating every point from all others, but that it is continuous in such a sense that every description of any kind is either inapplicable to any non-singular point, or else is such that, exclusive of any collection of such points that may be indicated to which the description applies, there is another and greater describable collection of non-singular points to which it equally applies; so that it is correct to say, with Herz, the correspondent of Kant, that there are no points upon a line until they are in some way marked; and indeed there is no multitude of points that could be marked without leaving room for a greater multitude to be marked. In order to establish this proposition, Mr. Peirce gives a completed doctrine of multitude which solves demonstratively the vexed question whether two collections can each be greater than the other. The memoir was said to solve a number of other problems.

Professor Crittenden gave a sort of appendix to that memoir which so deeply impressed the Academy at the Washington meeting. It was merely to the effect that a small amount of urate might be formed by low proteid metabolism. This slightly detracted from the force of his former argument, illustrating the tediousness of the process of settling questions in physiology by courses of experimentation. The methods of treating such problems by comparing opinions and narrating cases among physicians of great experience not only has the advantage of bringing men into notice, but, after fewer hours of debate than the years the experimentation would have consumed, the whole question is finally settled in the mind of every person who leaves the hall, just as it had been when he came in.

Prof. W. K. Brooks gave a paper on the pelagiac tunicates, convincing everybody that the two kinds of barrel-shaped animals with muscles round the barrel were

not widely remote, the completeness of the hoops in one case against their incompleteness in the other not being an invariable distinction, and two other supposed essential differences being only a difference in the degrees of development of certain parts. Dr. Franz Boas, the distinguished anthropologist, treated of psychic associations in primitive culture, making some interesting remarks that nobody who heard them is likely to forget, although they may have seemed matters of common knowledge. Professor Woodward communicated a brief account of a paper by Mr. C. E. Mendenhall, son of the Academician of that name, concerning the determination of the absolute value of gravity by means of a pendulum in the form of a ring suspended from sixteen different points. The value of the method could not be judged without long and minute study. Professor Woodward described a pendulum of his own invention, in the form of a horizontal bar suspended by long steel ribbons without knife edges. Since this apparatus presents no problems that have not been completely worked out, it is certain that it would be an excellent way of determining gravity. The chief difficulty would be to ascertain the temperature; for unless the suspending ribbons are very long, the advantages of this form will not be secured. Professor Chandler performed before the Academy a determination of the oxygen in the air of the Subway by Hempel's method. It is a very elegant method, and was very beautifully executed by a student of Professor Chandler.

JEAN JACQUES WEISS.

PARIS, November 5, 1904.

Prince Georges Stirbey has published some 'Notes and Impressions, with a Selection of Letters' of his friend J. J. Weiss, one of the most gifted journalists of the time of the Second Empire and of the period which followed the war of 1870 and ended in the establishment of the Republic. Weiss belonged to the unfortunate and brilliant generation of writers who had attained their majority at the time of the December *Coup d'État*. He was a friend and companion of Prévost-Paradol, of Edmond About, of Taine, of Francisque Sarcey. They all entered life, after the most brilliant studies, as natural adversaries of a régime which suppressed the liberty of the press. Everything is known about Prévost-Paradol, who in the end became reconciled to the Empire, and Minister of France at Washington; about About, author of many popular books; about Sarcey, who became a theatrical critic; about Taine, the only one who left a lasting memory, as he wrote books instead of newspaper articles. Weiss was, more than any of his friends, a born journalist, and left no work of importance. As a journalist, he was equal if not superior to all his contemporaries; but the fame of the journalist is as ephemeral as the fate of the actor. Under the Empire, a clever newspaper article was an event; but, after 1870, journalism became absolutely free, and if Weiss had not achieved a reputation under Napoleon III., he would have found it difficult, if not impossible, to attain to any great notoriety amid absolute freedom of the press and the confusion which it creates.

Weiss was so fortunate as to be admitted under the Empire to the staff of the *Journal des Débats*, the most highly reputed of French newspapers.

"It was," says Prince Stirbey in his preface, "an epoch full of difficulties and of dangers for a journalist; for people lived under a reign of warnings, suspensions, suppressions. Weiss knew with a consummate art how to avoid these numerous dangers. It was at this difficult period that he entered into full possession of himself. His talent acquired great surety, without losing anything of its vividness; his mind, an exactness and a clearness fine and subtle; his style, a new precision. Who is there, in our generation, that does not remember Weiss's leaders in the *Débats*? The politicians, even those whom he attacked, read them with a serious fascination; the Liberals were charmed with them; while the Imperial Government felt struck by them, and was powerless to restrain the liberties and audacities so adroitly managed. With what a clever hand, what a mixture of boldness and of caution, what ingenious allusions and citations, Weiss knew how to make his readers understand what he could not say overtly; with what foresight he knew how to prophesy the misfortunes of the foreign policy of France!"

His great success on the *Débats* opened all doors to Weiss; he wrote at times for the then famous *Courrier du Dimanche*, for the *Journal de Paris*, for the *Figaro*, the *Gaulois*, but he always remained faithful to the *Débats*, the most literary of our newspapers. He had received a highly classical culture at the École Normale, and occasionally he tried his hand at articles on purely literary subjects. Many of his essays, literary or political, have been gathered in several volumes. I will here give only their titles: 'À propos de Théâtre,' 'Autour de la Comédie-Française,' 'Le Drame Historique et le Drame Passionnel,' 'Essais sur l'Histoire de la Littérature Française,' 'Molière,' 'Le Théâtre et les Mœurs,' 'Les Théâtres Parisiens.' This list shows that Weiss had become a theatrical critic as well as Sarcey and some other of his friends; but theatrical matters were always to him a secondary object, and politics remained the great preoccupation of his life.

This new volume of 'Notes et Impressions' contains also a few essays, on the most various subjects, but its chief interest lies in the letters of Weiss which it makes public. I will, however, note a short essay which has, so to speak, a retrospective interest, at a moment when the separation of Church and State is daily discussed in France. It is thus entitled: "Are the ministers of the churches who receive a salary public functionaries?" and was written in September, 1881. It is well known that, after the period of the Revolution, in which all the Church properties had been confiscated, Napoleon made a treaty with Pius VII. which goes under the name of the Concordat. This treaty still subsists, after a century, but there is question of putting an end to it. The State gives a salary to the priests of the Catholic Church, to the ministers of the Reformed Church of France, and to the rabbis of the Jewish persuasion. Three churches are, what is called, recognized by the State—the Catholic, the Protestant, and the Jewish. Weiss maintained that the priests or parsons are not public functionaries, in the ordinary sense of the word.

Weiss's correspondence, which is published in the present volume, has a special interest. It would have been as well to leave unpublished some letters to Madame . . ., which are almost childish; but we can read with pleasure, for instance, letters from Taine to Weiss. In one, dating as far back as 1859, Taine sets forth his method:

"I am not an artist; I do not pretend to be one. I treat moral matters like physiology; I do nothing more. I have borrowed from philosophy and positive science methods which seemed to me powerful, and I have applied them to psychological sciences. I treat of sentiments and ideas as others do of functions and organs; what is more, I believe that the two orders of facts have the same nature, are submitted to equal necessities, and are the two sides of the same thing, the Universe. . . . All my ambition is to put my ideas in writing. As to the form, I make as little of it as you please."

Renan writes to Weiss in 1862, on the subject of the suspension of his lectures at the Collège de France, where he was professor of the Hebrew language:

"I delivered lectures in history, not in theology. It is quite true that the Collège de France is not a school of theology; but I was not theologizing when I treated, from the point of view of positive science, points of history which theologians treat from another point of view. Otherwise the finest and the most important pages of history would be suppressed."

The professorship of French Poetry at the Sorbonne was promised to Weiss in 1863, but Duruy, the Minister of Public Instruction, thought it incompatible with collaboration with the *Débats*, and asked Weiss to choose between the two. Weiss preferred to remain on the *Débats*. This was the occasion of a correspondence with M. Saint-René Taillandier, who obtained the professorship.

In 1867 and 1868, we find several letters addressed to Weiss by Thiers. He congratulates Weiss on his articles, and discusses several points with him. Alluding to a pamphlet which he wrote in 1830, 'La Monarchie de 1830,' now very rare, Thiers says: "It was written during the ministry of Casimir Périer; the monarchy of 1830 had been only six months in existence. . . . Its crime was that it struggled hard against the assaults of the Republicans in Paris and the Chouans in La Vendée." After the war between Austria and Prussia, Thiers writes (September 21, 1868):

"In 1866, on the discussion of the Address, I got it sent back to a committee, as the German question was omitted; thinking that France could not be indifferent in such a question. The committee concocted a senseless phrase, and, thanks to M. Ollivier, the Chamber was content with it. As for myself, I advised, not war, which was unnecessary, but, what was easy, opposition to the union of Italy and Prussia, by declaring that France would join the party which should be attacked by the other. There was but a word to be spoken, and I begged the Government to speak it. . . . The day after Sadowa, it was still possible to repair the evil—not the whole, but a part of it; but the Chamber had adjourned, and I could not speak."

In another letter, he returns to the question. He had told the Chamber:

"Prussia is going to become a formidable power if you don't arrest her. Nothing is easier. Prussia counts upon the alliance of Italy, and Italy depends upon you. Forbid her to ally herself with Prussia, and she will not disobey you. Say to Prussia that France is one of the guarantors of the German Confederacy, and has, therefore, the right and duty to defend its Constitution."

Such were the illusions of M. Thiers. He did not understand the strength of the movement which culminated in the

formation of Italian unity and of German unity; but he clearly perceived that it was not the mission of France to join the hands of Italy and Germany together. If great changes were made in Europe, it was the duty of the French Government to try to obtain some accession of strength for France.

In June, 1871, we find a curious memorandum of Weiss's on a person who wished to be informed as to the exact situation in France after the war:

"The Republic has been killed less by the insurrection of the Commune than by the inactive incapacity of Jules Favre, of Trochu, and of their colleagues in Paris during the siege, by the feverish and agitated incapacity of Gambetta in the provinces, by the awful waste which signalized, in Paris and in the provinces, the Government of the National Defence. The logic of the situation created by the disaster at Sedan under the Empire, by the catastrophes of Metz and Le Mans under the Republic, seems to bring us back to Henri V. There has been among enlightened and philosophical spirits, during these last eight years, a serious revulsion in favor of the doctrine of royal heredity. But this movement did not extend below the level of philosophical minds. The high, the middle, and the petty bourgeoisie have kept all their prejudices against the dogma of legitimacy, and these prejudices are as absolute as they are invincible. The manifesto of the Count de Chambord has only increased and sanctioned this unanimous repugnance."

Speaking of Thiers, he says: "As for the Presidency of Thiers, it satisfies nobody. M. Thiers, who controls neither his temperament nor his nerves, has alienated the National Assembly by his impatience and his insolence." Weiss had no political *partipris;* he consented to accept the post of Councillor of State, under the Ministry of Ollivier, when the Empire transformed itself and tried to become parliamentary and liberal. He accepted from Gambetta a high situation in the Foreign Office, but did not keep it long. His misfortune was to live at a time when everything was uncertain, when parties were in a state of constant fermentation and dissolution.

Correspondence.

THE APATHETIC CAMPAIGN.

To the Editor of The Nation:

Sir: For many years I have read the *Nation* for its judicial criticisms of public men and measures, and am sorry to conclude that, in the recent campaign and now, it is so partisan in its views and expressions that its judgments are unfair and unreliable.

I voted for Cleveland on the tariff issue, and believe I should stand with him to-day if sustained by a party as sane and reliable as the Palmer and Buckner Democrats. In your editorial, "Apathy," of November 17 you seem not to imagine that an independent voter might prefer Roosevelt, proven to be honest, intelligent, and a true patriot, with a party back of him rational on nearly every important question except the tariff, to one for the time right on the tariff, but having in it a large minority—possibly more—represented by Bryan, Watson, Hill and that ilk, that would influence and might control it. Roosevelt, trustworthy as mortal can be, sustained by the conservative business sense of the country—though not right on the tariff—we think better than a party with some men right on the tariff, joined with an aggressive, perhaps controlling, element wrong on financial matters, and dangerous on almost all questions of law, morals, and government; and under suspicion of saying things not believed in, and putting forward candidates not representing them, and that might be unable to control them.—Respectfully,

Jno. H. Ward.

Louisville, Ky., November 22, 1904.

[We were, and are, very well aware that every thinking voter had to sum up for himself candidate, platform, and past history of each of the two great parties before determining how to cast his vote. Men felt the same scruples about voting for Cleveland that our correspondent felt in the case of Parker. The difference in the two campaigns was one of warmth and earnestness, the immediate subject of our article. Perhaps the lacking element was personal: perhaps Cleveland, renominated this year, would again have carried the day—certainly the canvass would not have dragged as it did. On the other hand, Roosevelt's popularity, amounting to the clean bill which our correspondent gives him when he calls him "trustworthy as mortal can be," may have been more pervasive than the President himself ever dreamed of. What we deplored was the lack of evidence at the polls that the present Administration's acts in "questions of law, morals, and government" had the least reprobation, such as might have found expression in a diminished if sufficient Republican majority. We can at least congratulate our correspondent on having conquered his presumable Southern prejudices on account of Mr. Roosevelt's offence against the spirit of caste.—Ed. Nation.]

THE GENOESE DIALECT.

To the Editor of The Nation:

Sir: I have read with great interest your correspondent's article on the Italian Dialects, but his statement as to there being no vocabulary of the Genoese does not seem to be quite exact, as may be seen from the following title: Casaccia, 'Vocabolario Genovese-Italiano,' second edition, Genoa, 1873-75.

Yours very respectfully, O. T.

November 25, 1904.

Notes.

Houghton, Mifflin & Co. will publish immediately 'Arbitration and the Hague Court,' by John W. Foster, the well-known diplomat and author.

The Variorum Edition of the Works of Beaumont and Fletcher is to be published in twelve volumes by the Macmillan Co., under the general direction of Mr. A. H. Bullen, the editorship of the individual plays having been entrusted to various eminent British scholars. Volume I. contains "The Maid's Tragedy," "Philaster," "A King and No King," "The Scornful Lady," and "The Custom of the Country"; footnotes, facsimile title-pages, and introductions abound.

For the sake of a dozen of the quatrains facing the drawings of Mr. Gilbert James, FitzGerald's Omar is printed wholly on the left-hand page in the volume forming part of Messrs. Routledge's "Photogravure Series" (New York: Dutton). This is a little exasperating, and the drawings by no means restore one's temper. The scheme is Persian throughout, but there is no imaginative skill and very little decorative sense in the plates, while one is positively grewsome from its unrelieved literalness—"For who knows From what once lovely Life it springs unseen." The text follows the first edition, and is printed on parchment paper.

The six-volume edition of Poe's Tales, just issued by Messrs. Putnam, commends itself by the handy size of the volumes as well as by the print and neat binding. The novel feature is the generous supply of illustrations by F. S. Coburn, which show an uncommon range of power from the weird and creepy to the beautiful. The shadowy designs often miss their force from lack of intelligibility, but the best of them are impressive, and the artist's imagination seldom appears strained.

C. E. Brock's black-and-white illustrations of our English classics have maintained a high order of excellence, and his name is a guarantee of taste and skill in apt designs. He now appears in color in the Dent editions of Mrs. Gaskell's 'Cranford' and the 'Vicar of Wakefield' (New York: Dutton), and distinctly enhances the other daintinesses of his publishers' customary output. These volumes can be commended without reserve as gifts or personal possessions.

Mrs. Browning's 'Sonnets from the Portuguese' are once more luxuriously dressed in small quarto form, by the H. M. Caldwell Co., Boston. The verse is incased in a floriated border, all printed in uncompromising black, Morris fashion, but readable. The white and gold cover has been well conceived.

The same firm sends us Tennyson's 'Holy Grail,' in which the tinted borders are of feeble phantasy and overpower the text. The binding is a flexible brown leather.

Pleasing in every aspect is the little volume proceeding from the Scott-Thaw Co., 'The Wisdom of Robert Louis Stevenson,' collected and arranged from his writings. It is prettily framed and rubricated, and contains both a table of contents and an index. The limp covers are in crimson leather or leatherette.

Paul Laurence Dunbar's negro poetry, 'Lil' Gal,' is launched anew by Dodd, Mead & Co., with ornamental borders in tint by Margaret Armstrong, whose name suggests the Hampton Institute; and indeed a member of that school's Camera Club, Leigh Richmond Miner, supplies some capitally chosen and set-up *tableaux vivants* by way of photographic illustration.

Similar treatment has been accorded Paul Leicester Ford's reissued 'Love Finds a Way,' from the same publishers. Here Miss Armstrong's borders are floral, bold and with good success, while Harrison Fisher supplies some wash drawings, less characteristic, but sufficient.

Mrs. Sally Pratt McLean Greene's 'Cape Cod Folks' has stood the weathering of

nearly a quarter of a century, and is worthy of the extra pains bestowed upon the current edition bearing the imprint of De Wolfe, Fisk & Co., Boston. The author's portrait serves as frontispiece. The charm of the illustrations lies in the full-page and vignette views of actual Cape scenery. It was a pity to mix with these a few mediocre and inharmonious designs pertaining to the action of the story.

Little, Brown & Co. have reprinted Mathilde Blind's Life of George Eliot, which originally appeared in 1883, with additional chapters on George Eliot's work, her friends, etc., and a complete bibliography by Frank Waldo and G. A. Turkington. Miss Blind's account of the great novelist was felt to be an unsatisfactory one in 1883, and it has not improved in the interval; in fact, its value has been impaired by later publications. It was, perhaps, hardly to be expected that the present editors could add anything new, either to the ascertained facts of George Eliot's life, or to the considerable body of criticism of her writings. What they appear to have done is to gather into their supplementary chapters such illumination as could be extracted from Herbert Spencer's autobiography and from the critical essays of Leslie Stephen, Henry James, and others. They have fallen into one error which it seems worth while to correct. They speak of Mr. Lewes as acting the part of a "master of ceremonies only" at the celebrated Sunday afternoon receptions; but those who attended the receptions in question will, we think, agree that this is a very misleading description. Lewes was one of the best conversationalists of his day, and he certainly contributed in large measure to the charm and the success of these gatherings.

After Mr. Crockett's abridgment of Scott, Fielding's 'Tom Jones' is taken in hand for the "Condensed Classics" of Messrs. Holt. The reduction, less vital than in Scott's case, has been performed by Mr. Burton E. Stevenson, who has brought the story within 450 pages 16mo. His object has been to prevent tedium, without affecting the course of the narrative, and also without Bowdlerizing.

Mr. Ernest A. Vizetelly undertakes, in 'Émile Zola, Novelist and Reformer' (John Lane), an elaborate vindication of the famous writer and energumen. One may confess to some disappointment at discovering that the special pleading which characterizes the whole biography renders its author quite unable to estimate the sincerity of one chancing to hold divergent views concerning either the work or the public conduct of the unsparing satirist, who delivered his denunciations with possibly less of discrimination, and certainly less humor, than any one since the days of Swift. The value of such literary criticisms as this volume contains may be gauged by the exalted place given to 'Le Docteur Pascal' as the culminating effort of Zola's genius. In discussing 'L'Affaire,' it never seems to occur to Mr. Vizetelly that public attacks on the judiciary are usually punishable in other countries beside France.

Mr. Edward Marston, long known as a London publisher and an "Amateur Angler," and later by his 'Sketches of Booksellers,' has now dropped into informal autobiography in 'After Work' (Scribners). Entering the house of Sampson Low in 1846, and becoming a partner ten years later, he kept recollections of Bulwer, Macaulay, Samuel Warren, G. P. R. James, and sundry other more or less notable persons. He has more to say of R. D. Blackmore, who in the early sixties brought for publication a version of part of Virgil's Georgics. The future novelist then, as later, looked the market-gardener: "his voice was gentle, deliberate, almost timid." When famous, he was jealous of the book that had made him so, not considering 'Lorna Doone' "his best or even his second-best work." His too unfamiliar visage is the most interesting of twenty portraits here given; that of Jules Verne might pass for J. G. Blaine, while Charles Reade is presented in his most unwarlike mood. The late G. A. Henty "was a rough diamond of the first water, hearty, sometimes boisterous, genial, generous, sympathetic, and simple-minded as a child." Mr. Marston endeavors to account for the appearance of Sir Morell Mackenzie's 'Frederick the Noble' in the New York *Herald* and the London *Standard* two days before publication in book form, by supposing that the proof-sheets were stolen from the printers and cabled across. A necessary index is not lacking.

But for Elizabeth, Mrs. H. C. Eggar's 'An Indian Garden' (James Pott & Co.) would not have been or would have been other than it is. The "Burra Sahib" takes the place of "The Man of Wrath," and the coolies of the German peasantry. Unfortunately, there are no children to replace the babies of the months—it is Anglo-India's tragedy to be without children. These garden books, written by ladies, have a charm of their own. A woman cannot well write about the minutiæ of housekeeping—at all events women have not yet done so with acceptance; but a garden gives them a kindred subject, charmingly suited to the display of the feminine point of view. An Indian garden of the plains is an unknown thing to most people—the names of its trees and plants connote little to us; yet this book can be read with pleasure, photographs, such as they are, helping the ordinary reader's ill-equipped experience. There are nice dogs in it, and horrible snakes in plenty, tropical deluges of rain, and a sense of things growing apace. It is shade, rather than sunshine, that takes the prominent position. Steamy air, orchids, ferns, palms, and blossoming trees are the materials of the picture. Plenty of discursive interludes about odd characters save the horticulture from monotony, and there are not too many native words for the patience of a foreign reader.

Why is it that California is so inspiring to writers of mountain books? There are many vaster mountain ranges. Great glaciers are not found there. California is not remarkable for the difficulty or excitement of its climbing. Yet, from Clarence King down, good books about mountaineering have been inspired in succession by the beautiful region in question. We hardly dare suggest that the reason may be found in the fact that what we may call the professional climber goes elsewhere, attracted by higher game. Clarence King, John Muir, and Stewart Edward White are not to be counted in the ordinary run of climbers. They belong to the larger body of nature-lovers. The last-mentioned, in his newly issued book, 'The Mountains' (McClure, Phillips & Co.), certainly belongs to the Clarence King rather than the Whymper group of mountain authors. He is more a traveller among than a climber of hills. His adventures are those of the trail rather than of snowfield and crag. He introduces his readers to the forests, the streams, and the cañons oftener than to peaks. Evidently he loves the upper forest region more than the barren heights—his visits to the latter are brief. He can write well of what he loves. He belongs to the Thoreau kindred in his attitude to nature and the Borrovian in his eye for men. The book is one to be thankful for.

The "Langham Series of Art Monographs," published in New York by Charles Scribner's Sons, already numbers seven pocket volumes of from seventy to eighty-five small square pages each. The seventh volume is entitled simply 'Nuremberg,' and is the work of Hermann Uhde-Bernays; having the same character as its fellow-monographs, 'Venice as an Art City,' 'London as an Art City,' etc. Of a more general interest are the volumes on Bartolozzi and his English pupils, by Selwyn Brinton, and on the 'Illustrators of Montmartre,' namely, Lautrec, Morin, Forain, and Caran d'Ache—with others of their stripe. The second volume of the series deals with the color prints of Japan, and is by E. F. Strange, the keeper of prints in what was once the South Kensington Museum. Volume VIII. is to be an essay by Mr. Brinton on 'The Eighteenth Century in English Caricature.' Also, there are to be studies of single artists; Auguste Rodin, the sculptor, has already been treated by Rudolf Dircks. Noticeable in the Nuremberg book is a very personal tone, altogether welcome to one who knows something of the subject already and is prepared to enjoy a fresh treatment of an old subject. The present essay is for all the world like what a series of private letters might be, and is on that account far more entertaining, and perhaps correspondingly more useful. The first person is used continuously, and the author's own preferences are frankly avowed as impressions and inferences, not necessarily binding upon others.

Frank G. Sanford's 'The Art Crafts for Beginners' (The Century Co.) is addressed to those who would make a beginning of craftsmanship; formulates by simple precept the fundamental principles of all crafts, and illustrates those principles by concrete examples of beginner's work in wood, leather, sheet metal, bookbinding, mat-weaving, and pottery. The problems set for practice are well within the range of a beginner's skill, provided there be patience and the right spirit; these simple tasks, if performed with a full understanding of the real teaching of the book, will carry the learner much farther toward true craftsmanship than he may suspect. The book is not comprehensive, but rudimentary; without grasp of the rudiments the artisan, however technically skilled by practice, will fall short or fail wholly. The precepts of this book, which show the workman in what way thoughts may best be moulded into things, are explicitly set forth in a few lines here and there, but are readable between all the lines by implication. Respect the limitations of the materials and tools employed, subordinate ornament to functional meaning, learn more by ex-

perience than from any other teacher, let your own thoughts find expression, make the work and its product wholly your own—these are some of the wholesome injunctions of this useful work.

Among recent law books is an annotated edition of 'The National Bank Act,' by John M. Gould (Boston: Little, Brown & Co.). All the amendments are given, and explained as well as annotated. It is pretty good proof of the careful drafting of the original act, now forty years old, that the number of decisions under it seems to be only seven or eight hundred. There are, of course, still openings for doubts and possibilities of controversy, but the small amount of friction and confusion with which the act has been in the main developed is remarkable.

"Comparative Literature" is a young discipline, but its critical apparatus is already considerable. Five years ago Prof. Louis P. Betz of Zurich published a bibliography of all the works devoted to comparative study, with an introduction by Prof. Joseph Texte of Lyons. Both of these scholars have since died, and the second edition of their book, 'La Littérature Comparée: Essai Bibliographique' (Strassburg: Karl J. Trübner), has been entrusted to the care of M. Texte's successor at Lyons, Prof. Fernand Baldensperger. Many titles have been added, and new divisions appear, devoted to the Scandinavian and Slavic literatures, to the foreign influences on American literature, to the history of poetic themes and motives, etc. The last of these is scarcely adequate, and the subject is still chiefly limited to *Quellenforschung*. A subject-index replaces the old index of authors, but the adequacy of this addition may also be doubted; under the word "Scaliger," for example, works on 'Dante and the Scaligeri' and 'Opitz and J. C. Scaliger' are alike referred to, and innumerable themes treated in the works listed in the body of the book are neglected when these themes do not appear in the titles of the works themselves. This bibliography is a valuable aid to the comparative student, but it still stands in need of complete and fundamental revision. No more competent authority could be selected for such a task than M. Baldensperger himself, but in this instance his work has been impeded by his tender respect for the memory of his lamented predecessors.

An Historical Institute of the Netherlands is to be established in Rome by the side of the Prussian and others of this kind. This decision of Parliament and Government is the outcome of the agitation of the historian Blok. The funds to conduct the institute for five years have been granted, and the purpose will be to make researches in the archives of Italy, especially for materials bearing on the history of the Netherlands. Dr. Brom, a prominent Catholic savant of Utrecht, is entrusted with this work, as he has for years been studying the archives in Rome. At the same time a scholarship covering five years of research in the history of Italian art was granted to Dr. Orbaan, who has been making special investigations in Rome for a number of years.

Express courses of lectures for women students are announced for the coming winter semester by the University of Göttingen. Seven professors and the same number of privat-docents, representing all the faculties, have united in this innovation and have already published their subjects.

The recent utterance of the Kaiser to the effect that a school of seventy children in charge of a single master is a "Menschenquälerei," has caused German educational journals to examine the statistics in the case. According to the reports published by Prussia in 1901, there were no fewer than 949 schools in the kingdom with a contingent of from 71 to 100 children for a single master; 685 half-day schools reported 120 and more children to a single teacher, fully one-half of these being in the Polish provinces. In 5,048 schools with two or more teachers there was an enrolment of between 71 and 100 for each teacher; in 89 schools with one teacher and in 415 schools with two or more teachers, each had charge of 121 to 150 pupils; and in one school with one teacher and in two with more teachers the enrolment for each was more than 150. According to the latest published returns, it appears that 19,653 teachers, or fully 22 per cent. of the total corps, suffered from the affliction and injustice the Emperor condemns. Schools are reported in charge of one teacher with 130, 140, 166, 168, 180 and 188. The climax is capped by the case of a man in Dozonowo, district of Kulm, with a school of 201 children.

By an error for which we cannot now account, we spoke of the author of 'The Island of Tranquil Delights' as "the late" Mr. Charles Warren Stoddard. His publishers, Messrs. Herbert B. Turner & Co., remind us that Mr. Stoddard is far from an age at which such an error would be fairly excusable, and we make haste to restore him, not only to life, but, we hope, to a long activity as a writer.

—The October number of the *Library* contains the second and final instalment of Henry Bradshaw's letters to officials of the British Museum, previously noticed. The longest letter, dated January 18, 1868, and addressed to Thomas Watts, then Keeper of Printed Books, seems to have been written in reply to an inquiry concerning the preparation of copy for the printed-catalogue slips used at the Cambridge University Library. The writer describes in some detail the routine as he had found it, and then continues: "At present my object has been to learn as thoroughly as I can what the meaning of the present practice is, and not to alter where I can help it, until I know what I am altering, and then alter at once. I feel so convinced that, in making any change in cataloguing, promptness is the only safe method." A wise rule! Mr. Robert Steele continues his investigations as to "What Fifteenth-Century Books are About," dealing this time with "Divinity." It seems that 45 per cent. of the incunabula mentioned in Proctor's Index are of theological or devotional character. Mr. W. E. Doubleday tells about the Library Association Conference at Newcastle-upon-Tyne last September. It is interesting to note that the council was requested "to inquire what assistance would be required to ensure the continuance" of the *Review of Reviews*' Index to Current Periodicals. Prof. Thomas Hodgkin's presidential address dealt with the Love of Books, tracing his subject from the times of the Palæolithic man. Among the addresses was one by Prof. Mark Wright of Durham College on "The Public Reference Library and Secondary and Higher Education." This paper is printed in full in the October number of the *Library Association Record*, which also contains the proceedings of the conference. The speaker regards conditions in schools and colleges as unfavorable to reading for other purposes than examinations. There is too little time for "browsing among books," too little reading for recreation, and too little time for thinking. It is significant to find this same note sounded by the Librarian of Michigan University, Prof. R. C. Davis, in an article entitled "An Over-use of Books," in the November *Public Libraries*. The discussion of Professor Wright's paper brought out the demand for "a lending library for students." The reaction against the pure *reference* libraries ("Präcenz-Bibliotheken" is the more correct German term) is beginning to set in.

—The 'Jewish Encyclopædia' (Funk & Wagnalls Co.) is moving rapidly to its close, which is now fixed for the end of 1905. Volumes vii. and viii. (Italy to Leon to Moravia) have recently appeared in close succession, and, despite this speed, are showing a general quality very fairly equal to that of their predecessors. As before, and as is only natural in the record of a race, far more space is given to biography than to anything else; next, perhaps, come the notices of localities. Much of this space might have been saved, and probably with advantage, if all biographies of the living —an element of very uncertain value, and open to the suspicion of business influence —had been excluded, and if far fewer photographs of synagogues and the like, mostly of depressing architecture, had been given. Pictures of historical buildings, rich in memories and associations, are always in place, but too many of those represented here have still to make good a claim to interest for any but their immediate frequenters. Among the articles outstanding in general interest may be noted that on Jerusalem. It is naturally full and well illustrated, especially by an ingenious system of plans on tracing paper—giving the city as it was at different periods—which can be superimposed on one another. Even higher interest will be raised by the article on Jesus of Nazareth. The historical treatment has been put into the hands of Mr. Joseph Jacobs, who is a folk-lorist and miscellaneous editor. Of him here fewest words are best. Much more adequate is the theological treatment by Dr. Kaufmann Kohler; his position can be put in a word: Jesus was "the acme and the highest type of Essenism." Jesus in Jewish legend is treated by Prof. S. Krauss of Budapest. The difficulty which this whole rubric must have offered cannot be denied, but that the thirteen pages given here are an absolutely insufficient recognition of the one personality of the Jewish race which, to put it mildly, has affected the human race in general, and which, as all believe, bore a message equal in weight to that committed to any member of the whole human race, is staringly plain. In the same volume the rubric Jeremiah—life, book, epistle—has twelve pages, and, if we add the separate article on Lamentations, has nearly fourteen—a page more. To turn to less contentious matter, Judah Halevi, the singer of Zion, whom all know if only through Heine, is sympathetically and sufficiently portrayed. The Kishineff tragedy is rehearsed; Judaism, from the reformed

point of view, has ten pages competently from Mr. Kohler—the conservative is to be given later under Religion; the Karaites are fittingly treated by Abraham de Harkavy. All these are subjects generally known. A life, however, which it is the privilege of such a work as this to bring into broader publicity, is that of Isaac Lampronti, the Italian rabbi and physician. We are here told of his Talmudic encyclopædia on which he had spent his life, how he began to print it in 1750, when he was seventy, and how the last sheet finally appeared in 1887, 131 years after his death—a case surely unique even in the slow annals of bibliography.

—In volume viii. the most generally interesting article is probably that on London—over twenty-three pages by Mr. Joseph Jacobs, here in his *métier*—with many illustrations and maps. Another is on Luria, the founder of the modern Cabala, but it fails to note the highly probable influence on him of ash-Sha'rani, the Muslim mystic, his somewhat older contemporary. Another deals with a singular difficulty which arises from the inflexible nature of Judaism. Where, for an orthodox Jew, does the dateline fall when he travels round the world? Poe, in one of his tales, worked out three Sundays in a week. For a conscientious Jew that would be awkward, but, apparently, according to the decisions, he may have to guard himself by observing at least two Sabbaths on his wanderings. No less than Judah Halevi, the poet, is an authority in the case, and the conception of Jerusalem as navel of the world is a starting-point. This, without doubt, is a matter "full of seriousness," as life was to the pugnacious Scotch dog, but only of a lighter humor is it that Daniel Mendoza, "the Star of Israel," a pugilist of distinction, has his own mirthful seriousness for this book, and carries off full two-thirds of the space of Mene, Mene, Tekel, Upharsin, beside which the ironic alphabet places him. It must be a misprint that *metuentes* is said (p. 521) to be used "in Latin inscriptions by Juvenal for Jewish proselytes," but the misprint is of an awkward kind, and the article does not tell where in Juvenal the expression occurs.

—Another of the excellent Columbia University Press Publications (Macmillan) comes to us in the volume entitled 'Corneille and Racine in England,' by Miss Dorothea Frances Canfield. It seeks to show how systematic attempts at domesticating the neo-classic drama in England (by means of translations) failed to produce anything like valuable results. Exhaustive even to minuteness in research, this work is a most conscientious contribution to the history of byways in literature. The indebtedness of the English stage to its neighbors across the Channel no doubt helped to stifle originality. In comedy, as Prof. A. W. Ward has shown ('English Dramatic Literature,' vol. iii., 315), the "lifting" was unscrupulous; and in 1718 Mrs. Centlivre could actually say, in the prologue to "A Bold Stroke for a Wife":

> "To-night we come upon a bold Design,
> To try to please without one borrowed Line."

And yet some of the brightest scenes in her comedy were possibly recollections of Regnard's 'Les Folies Amoureuses' (1704). But conclusions as to the futility of transplantation should rest on some sounder basis than the evidence of translations executed chiefly by men of extremely mediocre aptitudes, and consequently incapable of rendering in English verse the stately measures of Corneille or Racine. The solution of continuity in English writing of tragedy comes in reality much less from the weakening effects of systematic borrowing or adaptation than from obvious conditions in social life which would have cramped native talent had any existed. Men like Addison and Johnson, who *imitated* the great Frenchmen, were totally undramatic in mind and temperament. That foreign dramatic influence can urge to higher issues and noble change, is one of the commonplaces of the history of the Romantic drama in Germany and France.

—The Classical Association of England and Wales, founded in December, 1903, has published its first annual Proceedings (London: John Murray). The objects of the Association are to promote classical studies, to impress on public opinion their claim to an eminent place in the scheme of national education, to improve classical teaching, to encourage investigation, and to create opportunities of friendly intercourse between the lovers of classical learning in the two countries named. We are not informed why Scotland and Ireland, where learning no longer (as in Sydney Smith's day) "goeth very bare," are left out of this alluring scheme, in which, as is the case with the British Association for the Advancement of Science, the serious and the social are induced to lie down together. As the president of the Association pointed out at the first general meeting at Oxford last May, this is no society of experts. It is designed to appeal even more to the outside public, which, if it ever knew anything at all of the classics, has retained only a rather vague impression that Greek and Latin did it no harm. By its choice of the Master of the Rolls as president, the Association emphasizes this aim. What the speakers at the Oxford meeting were inclined to dwell on was the practical value of a classical training. Professor Ramsay related that a land agent, a distinguished surgeon, and a general had all separately declared recently that "the resourcefulness and habit of accurate work, which they acquired in cultivating Latin verse, had proved of great use to them in the practical work of their lives," while Admiral Sir Cyprian Bridge related an incident in which a young naval officer's knowledge of Latin had saved his country from grave international complications. There is something pathetic about all this. Lord Bowen said that classical scholars reminded him of a timid elderly traveller fussing over his luggage at a crowded railway station. But that jealous air of proprietorship is giving way to an almost too effusive eagerness to convince one's fellow passengers that to travel without luggage as solid as one's own is to court disaster. The Association's first enterprise will be to examine into the spelling of Latin in school and college text-books, with a view to establishing uniformity. This has already been done to some extent in America. The secretaries of the Association are Professors Postgate and Sonnenschein.

—It seems likely that the historical scholars of Great Britain will not rest content until they have established in London an institution similar to the *École des Chartes*. Even if the Government refuses to follow the example which France has set of expending public money on the education of palæographers, the requisite funds may be supplied by private donors. The Creighton Memorial Fund has been handed over to a committee, of which Mr. Bryce is chairman, for the purpose of providing advanced historical instruction. This money, together with sums especially subscribed, enables the committee to supply the services of experts like Mr. Hubert Hall and Mr. I. S. Leadam. We do not mean to convey the impression that a regular school has yet been started, but important personages are interested in the project, and much may come of it. We have before us the second report which has been issued on behalf of the "Advanced Historical Teaching Fund" by the Committee of Management. During the year which followed the institution of classes, thirty-one students attended the courses given by Mr. Leadam and Mr. Hall. In the year under review the numbers were well maintained, and the results seem to have been highly satisfactory. Mr. Leadam continues his lectures on the early Tudor period, while "Mr. Hubert Hall, in his classes on Palæography, Diplomatics, and Historical Sources, has completed a carefully graduated course of instruction extending over the whole session, in which he has dealt with the handwriting, construction, and classification of historical documents (chiefly English) from the eighth to the eighteenth century." Some of Mr. Hall's students have been engaged in collecting materials for the 'Victoria County History,' and in his Seminar much of the work was done which has given us the Winchester Pipe Roll in a folio volume. M. Charles Bémont's notice of this edition in the *Revue Historique* bears witness to the thoroughness of its workmanship, and other fruits of the lectures may be found in monographs by Miss Skeel and Mr. Wiener. For the present the committee is hampered by the meagreness of its funds, but London is so rich and the cause so good that an adequate endowment should soon be forthcoming.

RECENT POETRY.

Mr. Frank Dempster Sherman's 'Lyrics for a Lute,' published fourteen years ago and thrice reprinted, made him a marked man among the minor poets, at least in the eyes of those readers who still take an interest in poetry as a fine art. Such readers, whose perusal of periodical poetry can but make them echo Leopardi's cry,

> "Musa, la lima ov' è?"

have found some comfort in Mr. Sherman's fine, though infrequent, contributions to the magazines; they will take more comfort and fresh delight in his new 'Lyrics of Joy' (Houghton, Mifflin & Co.). Fortunately, Mr. Sherman's lyrics are not altogether of joy. The dozen charming songs that make up his section headed "Nature" do, indeed, carry no mood save that delicate exuberance of delight which springs in a sensitive mind confronted with the fresher beauties of this various world; yet the greater number of his poems are not free from that shadow of grief which lends a brightness to a poetic picture and a sweetness to poetic

melody. Perhaps the most wholly characteristic piece in the volume is "A Tear Bottle":

Glass wherein a Greek girl's tears
Once were gathered as they fell,
After these two thousand years
Is there still no tale to tell?

Buried with her, in her mound
She is dust long since, but you
Only yesterday were found
Iridescent as the dew,—

Fashioned faultlessly, a form
Graceful as was hers whose cheek
Once against you made you warm
While you heard her sorrow speak.

At your lips I listen long
For some whispered word of her,
For some ghostly strain of song
In your haunted heart to stir:

But your crystal lips are dumb,
Hushed the music in your heart;
Ah, if she could only come
Back again and bid it start!

Long is Art, but Life how brief!
And the end seems so unjust:
This companion of her grief
Here to-day, while she is dust!

Mr. Sherman has the artist's gift of knowing the limit of his range; he attempts to give voice to few passions more poignant than this vague and generalized regret. Hence the prime quality of his work as a whole is the very perfection of pleasantness. In a poem, as in a gem, the more exquisite the cutting, the more do slight flaws stand out. It is, perhaps, Mr. Sherman's very success in studying impeccability that makes groups of vocables, like "as was hers whose," in the third stanza of the poem quoted above, hiss disproportionately loud in our ear. There are a few, but only a few, such jarring notes in Mr. Sherman's melodies. For the most part, his verse has a silvery sweetness of consonants, an ordered variety of vowels, that recalls the Elizabethans; as in his "May Morning":

"What magic flutes are these that make
Sweet melody at dawn,
And stir the dewy leaves to shake
Their silver on the lawn?"

Mr. Sherman knows how to handle his dividers and measuring rod as well as his file. None of these implements is very well adapted to making a noise on a tub, but by the use of them Mr. Sherman has given his poems form in the old architectural sense; nearly every one has a compactness and completeness of organism that makes it memorable.

We suspect that if one could get at Mr. Bliss Carman's set of these tools, so useful to the poetic artist, he would find them a little rusty. In his 'Songs from a Northern Garden' (L. C. Page & Co.), being the fourth volume of his "Pipes of Pan," Mr. Carman is as musical and picturesque as ever—nay, he is too musical and too picturesque. Like that Burdock who "never left anything out, as he wrote only for his own pleasure," Mr. Carman finds it hard to forego a pretty image or a sweet cadence, however far it may lead him from the path pointed out by the original poetic impulse. He captures many fine phrases, like—

"That's master thrush. He knows
The voluntaries fit for June,
And when to falter on the flute
In the satiety of Noon;"

but there is in the present volume no poem so perfect as half a dozen that could be found in any one of Mr. Carman's earlier collections, while the rill of neo-paganism that ran so pleasantly through those, here threatens to inundate the page with a kind of fluent amorism that leaves one dazed and unconvinced. How much a poet may gain in virtue by renunciation can be learned in no way better than by reading Gray's "Elegy" with and without the lovely stanzas which the self-denying ordinance of his taste bade him reject.

Miss Ethel Cox's 'Poems, Lyric and Dramatic' (Badger), are another case in point. The poetic quality of any given page is fairly pleasant, but the poetic vitality of the book would have been increased more than fourfold had at least three-quarters of it been left out. Miss Cox draws her imagery and her inspiration not so much from nature and men and women as she knows them, as from nature and men and women as Spenser, Keats, Tennyson, and Landor knew them. All her pieces are externally energized, so to say; but her Muse has fed on bee-bread of an excellent quality, and, though not always careful of the last metrical perfection, and sometimes too lush in phrase and uncertain in syntax, can, at her best, make very pretty poetry—witness these dainty and tender lines:

All through the fragrant evening ran a sound,
A piping shrill and lone, the meek complaint
Of some warm-breasted bird left desolate:
And hearing, soft we parted the white boughs,
Beneath a show'r of brittle snowy leaves,
And found, within, a little empty nest
Wrought fine and fair, and warm as a true heart
For sheltering Love; her balmy cheek near mine;
And frequent came that simple sound of grief:
One wistful tear fell, and her bosom heaved!
We turned amid the blossoms, dewy-sweet—
And, with a touch, eyes fell, and our lips met!

Thirteen years ago we noticed the original publication of Mrs. Lilla Cabot Perry's 'From the Garden of Hellas,' translations into verse from the Greek Anthology, which is now reprinted with the imprint of Houghton, Mifflin & Co. Mrs. Perry has dealt intelligently and very faithfully with her material. Her translation is as literal as any that we have in verse, but we do not think that she has been more than ordinarily successful in conveying to her page the fragrance of the *hesternæ rosæ* of Meleager and his fellows. This from Julian of Egypt is perhaps as happily caught as any:

I twined a wreath of flowers one day,
And lo! Love 'mid the roses lay.
I seized him by his wings straightway
And plunged him in my wine.
I drank and never more find rest,
But feel Love's tremors in my breast.

Yet whoever will be at the pains of comparing this with Addison's tenderly quizzical rendering of the same epigram, will discover how much the effectiveness of a poetical translation depends not upon literal fidelity of rendering, but upon the drawing out of those meanings which, as Dryden so finely said, "are secretly in the poet."

'Old Voices,' by Howard Weeden (Doubleday, Page & Co.), shows a vein of sweet and unaffected sentiment and a good ear for a verse tune. To our mind the following stanzas need but the substitution of an explicit "My" for the vague and prosaic "One's" in the penultimate line to make an admirable lyric:

The south winds shake the mimosa awake
With a shiver as soft as rain;
The south wind dies, the mimosa sighs,
And sinks to silence again.

And oh, but the scent that is faintly lent,
By the stirred mimosa bloom!
One's heart nearly breaks with the thought it awakes,
Oh tender, oh cruel perfume!

Not to sentimentalize our page with too many citations from the poetry of mild sentiment, it will suffice to say of Mr. Barton Grey's "The Heart's Quest (G. P. Putnam's Sons) that it is a volume of readable and facile verse, with implied stories and dramatic situations in the background that rather suggest the author's study of the poetry of Owen Meredith. On the other hand, Browning and Arnold are the obvious inspiration of "Thekla, and Other Poems," by Mr. Stephen Hughes-Games (Longmans, Green & Co.). This is a volume of earnest and thoughtful versifying—even the poems in blank verse on Scriptural subjects are not unreadable; yet we have not been able to discover in the volume any deposit of perdurable poetry.

The quality of the verse which Mrs. Mary Thacher Higginson has collected in "The Playmate Hours" (Houghton, Mifflin & Co.) is seen to advantage in this pleasantly imaginative piece:

INLAND.

My home is far above the ocean sands—
Too far to watch the surges roll and break;
But every day across those meadow lands
Fly sea-gulls toward the lake.

No sound of dashing waves the silence brings;
No foam, like drifting snow, delights the eye;
Instead, a sudden cloud of rushing wings
Gleams white against the sky.

The sight of graceful schooners sailing fast,
Straight for their harbor, is denied to me;
But I can count the fair gulls soaring past,
They are my ships and sea.

"Hamid the Luckless, and Other Tales in Verse," Mr. John Payne's latest volume (Nutt), is in every way worthy of that excellent poetic craftsman. Mr. Payne renders his eight Oriental apologues in spirited pentameter couplets, with an unusual speed and vividness of light-footed narrative. A single episode of Hamid's adventures will give the reader a taste of the picturesque, Chaucerian quality of Mr. Payne's easy story telling:

Alighting here, into a vasty hall,
With aisles of fretted cedar rounded all
And deep-groined roofs, wherein the sweet sky's hue
Cærulean shone the golden tracery through,
Hamid they brought and on a royal throne
Of right red gold, with many a cushion strown
Of cramozin and purple, high and wide,
Enforced him, wondering, sit; whilst by his side
His host, the king, on likewise took his place.
Then he undid the chin-band from his face,
And lo! the king a lady young and fair
Was as the sunshine in the April air.
Perfect in amorous grace and languishment;
There is no man beneath the firmament
Might look upon her beauty but in twain
His heart were rent for love and longing pain.

It is a little odd, but, nevertheless, a hopeful symptom, that writers of the better class of humorous verse show themselves more skilful artificers with the file than the generality of their more sober-sided brethren of the lyre. This is particularly remarkable in Miss Carolyn Wells's excellent "Parody Anthology" (Scribners). An ideal selection might have contained more pieces by the masters of parody and fewer pieces by minor parodists of to-day, but the anthology is more interesting to a critic of recent poetry as it is. If the contemporary writer of parody falls short of the charm of Calverley or the Smiths, it is largely because his wit is more topical and his versification less classically perfect; but in the latter respect, at least, there are, we think, admirable signs of growth to be seen in the work of some of the latest of our humorous versifiers. "Harry Graham" (Col. D. Streamer) is a notable example. His 'Misrepresentative Men' (Fox, Duffield & Co.) is decidedly *ad rem* in most of its hits; so it loses a little in absolute humor, yet it shows so high-spirited a mastery of words and metre (the result, we take it, of laborious days) that it will be read with pleasure by the most fastidious lover of what

is amusing. Mr. Graham is nowhere more gayly himself than in the last two stanzas of his "Aftword":

Abuse or praise me as you choose,
There is no limit to my patience;
My verse the London *Daily News*
Once styled "Mephitic exhalations"!
I lived that down (don't ask me how),
And nothing really hurts me now.

For while my stricken soul survived,
With wounded pride and dulled ambition,
My humble book of verses thrived
And quite outgrew the old edition!
So now I have exhaled once more—
Mephitically, as before!

We must not take leave of the writers of humorous verse without mentioning Miss Elizabeth Porter Gould. In reading Miss Gould's 'One's Self I Sing, and Other Poems' (Badger), the suspicion has sometimes assailed us that as a humorous writer Miss Gould has builded better than she knew. Yet at any rate she has succeeded in producing some marvellously lifelike imitations of a great variety of our poets in their less inspired moments. Take, for example, this after Shelley:

"Fair clouds are coquetting
In June's bluest sky—
All Nature loves petting,
Then why shouldn't I?"

Following a dedication to Mr. Carnegie that recalls the palmy days of the dedication as an art form, there are passages in Mr. Nathan Haskell Dole's ambitious "symphonic poems," 'Peace and Progress' (privately printed), that resemble Miss Gould's manner of vaticination; *ex ungue leonem:*

"Prisons shall be tactful schools
Where weaker men may learn
Life's inexorable rules—
The power and will to earn!
Wealth—the unearned increment—
Shall be a public trust,
Ne'er for selfish pleasure spent
Or kept for lucre's lust."

There are some ventures in verse that have a right to be judged by their finest lines, but such concerted pieces of enchained poetry as Mr. Dole has attempted are no stronger than their weakest. There is a good deal of "new thought" in Mr. Dole's book, and some interesting metrical experiments, notably one in hendecasyllables; but, taken as a whole, the quality of the achievement is not above that of the average oratorio or opera libretto, which, indeed, its tone and manner very much resemble.

He who would know the difference between thaumaturgic versifying and the fine art of poetry has but to turn to Henry van Dyke's 'Music, and Other Poems' (Scribners). In the very first lines we catch the accent of the veritable muse:

"Daughter of Psyche, pledge of that last night
When pierced with pain and bitter sweet delight
She knew her Love and saw her Lord depart,
Then breathed her wonder and her woe forlorn
Into a single cry, and thou wast born!
Thou flower of rapture and thou fruit of grief . . .
Thou flower-folded, golden-girdled, star-crowned queen,
Whose bridal beauty mortal eyes hath never seen!"

This invocation is followed by ten sections of varied verse that make up the poem called "Music." Dr. van Dyke has divined the moods of diverse sorts of music and the quality of various instruments very sensitively, and he has contrived to convey those moods and qualities in wholly musical and expressive verse, ranging from the rollicking lilt of a capital hunting song to the ethereal melodies of a strain wherein he strives to celebrate the psychological marriage of color and sound. For our part, we distrust this *Anderssstreben*, this type of poetry which, as its priests say, "constantly aspires to the condition of music." Yet Dr. van Dyke has achieved an interesting and all but convincing experiment. He has been saved from the tenebrous vacancy into which so many of his predecessors have fallen by his irrepressible gift for precise rather than vague and "symbolic" words. Throughout his book it is his mastery of the King's English that stirs our admiration even more than his singularly capable metrical workmanship and his wholesome and refined sentiment. How refreshing is the round tone of these lines from his "Victor Hugo":

Speak the truth with indignant lips,
Call him little whom men called great,
Scoff at him, scorn him, deny him,
Point to the blood on his robe of state,
Fling back his bribes and defy him.

'The Place of My Desire, and Other Poems,' by the late Edith Colby Banfield (Little, Brown & Co.), would have gained by a more rigorous editorial selection, yet there is matter in the volume to make a lover of poetry grieve for so fine a faculty so early cut down. Miss Banfield had, as her poems show surprisingly, a joyous love of familiar hills and streams, a poet's sense of the eternal pity of the world, and an instinct for the sincere and fitting word, guided by a knowledge of the very best in poetry. There is much in the book that tempts to quotation, but we must content ourselves with this sonnet, "To One Whose Father Died before Her Birth":

Is this the sorrow writ within thine eyes,
Thy mother's woe while yet thou wast unborn,
So that from birth thou wast already wise
In the great griefs that leave the heart forlorn?
A child of grief indeed thou seem'st to me;
Thy brow doth wear the trouble of past years,
Remembered not, yet ever borne by thee
Whose eyes are heavy with thy mother's tears.
Cculdst thou, remembering, grieving, mourn for him
As we our fathers mourn in tenderness,
Thy face were not so filled with longing dim,
The yearning of a child born fatherless.
Strange mystery—that thou shouldst meet with death
In life's dark chamber ere thou drewest breath.

There is in the haunting human pathos of this, as well as in the directness and simplicity of its phrase, so perfectly moulded in musical cadence, evidence that it is the work of one who might have gone far in the paths of poetry. *Manibus date lilia plenis.*

EIGHT NOVELS.

Sabrina Warham. By Laurence Housman. The Macmillan Co.

The Georgians. By Will N. Harben. Harper & Brothers.

The Private Tutor. By Gamaliel Bradford, jr. Houghton, Mifflin & Co.

More Cheerful Americans. By Charles Battell Loomis. Henry Holt & Co.

Manassas. By Upton Sinclair. The Macmillan Co.

Mr. Waddy's Return. By Theodore Winthrop. Henry Holt & Co.

Hearts in Exile. By John Oxenham. Dodd, Mead & Co.

The Undercurrent. By Robert Grant. Scribners.

'Sabrina Warham' is a story of the English coast, of cruel seas, quiet downs, and smiling farmsteads. As the landscape, so are the varieties of figures—lurid, grave, homelike, while in the mode of telling the sombre prevails. Through the sedate accuracy which marks the descriptions of nature in her wildest as in her most domestic behaviors, appears a deeply poetic feeling. So, too, each personage is handled with a loyalty of care that yet does not prevent at least one of them—Sabrina's mother—from being vague and unaccountable. Sabrina herself is of a palpable sweetness, a woman whose fine and noble idealism makes life difficult for her, and gives to her presence a certain awfulness from which the reader may not wholly escape. Valentine, the debonair deceiver, is almost too contradictory a compound of sincerity and sham for human credence. More firmly modelled is David, playing the silent, wise tortoise to Valentine's hare; David, in whose hawk's eye might be seen "a high aloofness, an unconcern in things near; horizons seemed rather to be its aim." Ronald, with his incurable cured love affair, is cleverly humorous, a not unnatural figure. Lady Berrers, the great lady, is described as "a stately romp," one who was "in repose a banquet; in motion, an elopement." The story turns on Sabrina's attitude toward a husband's fault, but this is a book in which the places are more personal than the characters, and the local atmosphere speaks as audibly as the story. "This is England!" murmurs Sabrina, looking at the long, rocky line of sea-wall and the green fields behind it.

"She was beginning to feel that this peace-loving disposition was the fundamental quality in the building-up of England's empire; that at the root of all her adventurous and fighting blood was this quiet faculty for shaping a field out of rough ground, for finding pasture in the wilderness; and wherever field and pasture, there a home and rest for her migrant breed."

All in all, the book is a fine, serious study of human nature set with dignity against a noble background.

Abner Daniel of old acquaintance is the *deus ex machina* of Mr. Harben's story, if not technically the hero. He moves as before among the scenes and figures of Georgia, dealing out to mountaineers and townsfolk philosophy, fun, and the higher skepticism, defending the falsely accused, smiting perjurers hip and thigh, and collecting his exonerating testimony an he were a very Sherlock Holmes. With all his kindly zeal for justice, Abner Daniel's humor lacks ethical delicacy at times. Thus, for example, bent on benevolence, he travelled to New Orleans, using a scalper's ticket, to do which successfully required deliberate, practised forgery. That he passed for I. Einstein is counted on to make the incident acceptable. This and other humorous proceedings of Abner's bring to mind the testimony of an inebriate recorded by a doctor in the *British Journal of Inebriety*, to the effect that society's habit of "treating drunkenness as a comic incident has something to say in the matter of how the drunkard is led to regard it." "American humor," that conspicuous product in the world's markets, should be jealously safeguarded.

'The Private Tutor' is like the tariff in that its revision were best entrusted to friendly hands. This is not to say that it lacks ability or brightness. A story of moderns with Rome as a setting is so familiar a scheme that it is something to find Mr. Bradford's Rome and moderns treated with considerable freshness. His Rome is light and unpretending, but, one feels, well-beloved. And his characters, an American cub, his tutor, a Polish adventuress, a Chicago girl ruling her parents kindly, and

running after the tutor with a consciousness of perfect taste, two malleable fathers, and a few social eccentricities, are less hackneyed than this roll-call indicates, but also more farcical than one expects from the best parts of the workmanship—the bright little touches, the crisp style, the talent for omission. The types, well introduced, are filled out lumpishly. The writer seems to have painted his figures with a whitewash brush after delicately outlining them. His landscape and reflections, on the other hand, are made as if with a manageable feather—a peacock feather, let us say, all eye and color—one that ought to do pleasant service in sketches of travel.

Mr. Loomis's 'More Cheerful Americans' are still cheerful and still American. As in the case of their predecessors, the reviewer heartily commends them to divers and sundry classes of readers, among them to the "grumbler," who figures now in the publishers' advertisement as the "gambler." Mention of the misprint is not intended to deter any gambler, who feels so inclined, from reading the book. Reform works in mysterious ways. The new papers are full of a cheer which is largely American and largely of a quality all the author's own. Miss Flutterly's reappearance is particularly a cause for gratitude as adding to the justified mirth of nations. Not the least sugary plum in the volume is the author's "Foreword," with his comments on that expression.

American, but of necessity not cheerful, is Upton Sinclair's "Manassas," a book combining lucidity and fervor to a singular extent. "A Novel of the War" it is called, and is, we understand, the first of three volumes. So far it is less a novel than a history, though the story is sufficient as a vehicle for facts more interesting than any novel. The causes of the war are here the theme, being touched upon as far back as the Mexican war, and the book closes with the battle of Manassas. The point of view is that of a young Southerner with a Massachusetts mother and a Harvard education. The heats of fire and ice animate him, yet he tells a straightforward story which may well set old blood tingling again and expound to young blood things they have read of, but not understood. Here are plantation horrors such as 'Uncle Tom's Cabin' made familiar, and here are the less often recalled political approaches to the crisis—the tariff quarrels, the territorial questions, the judicial decisions, the Senate's eloquence. Here figure Yancey, Calhoun, Toombs, Taney, as well as Webster, John Brown, Lincoln—no fanciful portraits, but vignettes clipped from history. Here, too, is the most appalling battle chapter since Sienkiewicz's trilogy. Let the young read it and tremble, and learn to "heed the song that Clio sings."

Other war memories are evoked in reading a posthumous novel by Theodore Winthrop. It is perhaps not as complete a work of art as 'Cecil Dreeme' and 'John Brent,' over which readers in the sixties shed tears for the patriot and the writer. Yet it justifies his sister in having thought it "too good to let die." The revision and condensation which the author did not live to do, have been entrusted to Mr. Burton Stevenson. The very interval between the earlier works and this late publication serves to give freshness to the sense of the writer's powers; of the surprisingly modern touch without the modern journalism of manner; the old-fashioned touch, too, of a cultivation boasting not itself, but sitting easily through grave and gay. This is a writer who is too much an artist to preach, too much a gentleman not to have principles; too young to escape altogether sophomorism in his fun, yet always scholarly in persiflage. Plenty of nonsense; a youthful overplus, it may be, of story and figures, but no dragging and no moral confusion—no wives "belonging" to unrelated affinities. Rakes are rakes, and are so called.

The time is that following the epidemic described by Winthrop as "having California." The heroes bring their riches from Mexico and India to spend them in an old-fashioned Boston and Newport, in the day of hotel life, hops, and picnics at the Dumplings. It is not, however, the story which matters so much as the treatment—a gay, fun-loving, crisp manner, a sound, sensible romanticism, a natural fineness, a quaint floweriness, with an occasional flash of the youthfully lurid. In these pages is found again the old charm of Winthrop, the writer; the soldier, lost to his country in one sense, to be possessed in a fuller one, is foreshadowed in touches like these: "The line was not yet drawn upon the great national question of America which has since made the position of man and man inevitable according to character and education. Politics were not interesting." Ira Waddy, returned to Boston from the Far East, asks:

"'I may seem rather ignorant after my long absence, but tell me, do men with the social position of gentleman here accept office from a government that is willing to make and execute such laws as this Fugitive Slave Bill?'

"'Why not? Mere social position does not make men gentlemen. They call themselves Conservatives.'

"'It seems to me,' said Ira, 'that, in the present condition of things, a Conservative must be either an ignoramus, a coward, or a knave.'"

'Hearts in Exile' is a story of Russia and Siberian exile, dealing less with politics than this type of book usually does. The expatriated whom it interests itself in were neither Anarchists nor Nihilists, but peaceful workers for the people. This, however, was to walk too near the web, and in its strands they found themselves helpless captives. The dreary exile for them was as little cruel as any exile to Siberia can be, and left them comparatively free to help those many others who were far worse off than themselves. Thus there are glimpses and hints of terrible things, among them of the "hunger-strike," where the unhappy victims starve themselves rather than submit to constant encroachments on their small privileges, and where, if the point be finally conceded, it is because the superiors, though willing to torture, object to kill, lest blame fall on their own heads from the home authorities. As rider to the story of banishment is attached, with somewhat alarming minuteness, an Enoch Arden complication. The story is well told on the whole, but reads here and there like a translation—an effect not lessened by such un-English expressions as "grimp," "no littleness of mind imputes to Paul," "contented to her new life," and so on. These small blemishes, however, do not detract from the interest or force of the grim picture.

Considered as a novel, 'The Undercurrent' is far in advance of 'Unleavened Bread,' which was a series of theses clothed in coats or skirts according to circumstances. The story in 'The Undercurrent' has closer hold upon the interest, and the characters are more alive, more entertaining. Still, Judge Grant remains less a novelist than a propounder and pleader. He sets his argument before the reader with equal clearness and heaviness, whether he be expounding the workings of the progressive legacy-tax bill, the divorce laws in the United States, the Rev. George Prentiss's nicely balanced proportions as clergyman and man of affairs, the furnishings of Mrs. Wilson's gorgeous house or those of her soul as an apostle of beauty. His is the style of an expert in accuracy, and it is absolutely without perspective. Mrs. Wilson's brooch, containing a miniature of two children of tender age, and Constance's desire to have her child's teeth straightened, loom as large and solemn as their creeds and codes. Conversations may be identified by paragraphing and quotation marks. The mass of detail in relation to commerce, politics, legislation, ecclesiasticism, Socialism, and the inner life of multi-millionairedom approaches the line that divides knowledge from knowingness.

Of the characters, there are two in whom there is much that is real—the worldly-wise, stanch churchman, and the money-exuding Mrs. Wilson, worshipper of æstheticism in art and morals. The others (and indeed they as well) are more or less pegs on which to hang doctrine on many subjects, but mainly on divorce and remarriage. Thus, Emil is the deserting, not unfaithful husband; Constance, the wronged wife; Gordon Perry, not so much the man who wishes to marry her as the argument for divorce and remarriage; the Rev. Mr. Prentiss, the church's ban; Mrs. Wilson, the opposition of the woman of the world, of the æsthetic, and (in a conventional sense) of the Christian. The story is one of "battling for a woman's soul"—a deserted wife's; the outcome, her surrender to her suitor. There is no new argument, but many and varied repetitions of the old ones. The story of two divorces in high life is made amply disgusting, but rather as a contrast to well-conducted and sensible divorces and remarriages. One should not go out of one's own State to procure divorce, for that is backhanded and discreditable, besides being an evasion of the law, which might prove troublesome. An ill odor attaches to the adulterous divorce of the fashionable world, but the humble poor, abandoned by their mates, receive every encouragement to consider the defection a violation of contract carrying a right to remarry amounting almost to a duty for which the world will be better. "If our aristocracy proves no better than any other—if the rich and powerful are to sneer at morals and wallow in licentiousness," says Gordon Perry, "we couldn't blame society if it should try a strong dose of Socialism." Yet perhaps, Mr. Perry, without having recourse to this "strong dose," a beginning might be made by modifying your own views. You say: "Divorce and remarriage are in many instances necessary for the welfare of humanity, for the protection and relief of the suffering and virtuous, and the joyous refreshment of maimed, tired lives." "What-

ever happens, the world will never go back to marital chains and slavery." "Think of the many poor creatures in the lower ranks condemned by your inexorable doctrine to miserable, lonely lives, who might otherwise be happy." Mr. Perry argues throughout as if opposition to divorce and remarriage were peculiar to the Roman Catholic and Episcopal Churches. He makes it a case of those churches *versus* the law of the land and the trend of American democracy. That other than ecclesiastical objections may be held, makes no part of his contention.

It is curious that Judge Grant, who in 'Unleavened Bread' satirized the "American Idea," now puts it forward as the war-cry of all reform, social and political. He writes of the American Conscience, the heritage of the American woman, American social evolution, the foreign attitude of the Roman Catholic and Episcopal Churches to native American ideas—as one would speak of American chewing-gum. He puts into Perry's mouth a sneer at a literal obedience to a few "casual sentences which Christ is reported to have uttered thousands of years ago in Palestine." Though Perry cites the history of marriage and has at heart the welfare of society, his argument for remarriage resolves itself into the old familiar one—"I want to." "Why should a vitiated contract be a bar between you and happiness?" he asks the betrayed husband. When Constance, after long denial, finally surrenders, she has nothing newer to say than—

"I love him. . . . I am sure at least of this: that it is better for the world that two people like him and me should be happy, than live apart out of deference to a bond which is a mere husk. I prefer to be natural and free rather than exquisite and artificial. As Gordon said, the ban of the Church when the law gives one freedom is nothing but a fetish."

And it seems not to have occurred to any of these enlightened Americans, except the Rev. Mr. Prentiss, that happiness is not the only aim of life.

ROBA D'ITALIA.

The Most Illustrious Ladies of the Italian Renaissance. By Christopher Hare. New York: Charles Scribner's Sons. 1904.

The Story of Ferrara. By Ella Noyes. Illustrated by Dora Noyes. (Mediæval Towns Series.) London: J. M. Dent & Co.; New York: Macmillan. 1904.

Venice as an Art City. By Albert Zacher. (Langham Series of Art Monographs.) Charles Scribner's Sons. 1904.

If the test of a period be the esteem in which it holds women, then the Renaissance, especially the Renaissance in Italy, ought to be magnified by the champions of feminism; for the Italian women, at least among the aristocracy, became emancipated long before their Northern sisters, and they managed in many conspicuous cases to combine purely womanly charm with high attainments in learning or with marked political capacity. The same conditions produced strongly individualized women as well as men; and among the group of illustrious ladies whom Mr. Hare has undertaken to describe, there are many striking types—intellectual, sensual, pious, fascinating, imperious—but there is no blue-stocking.

Mr. Hare has made a good selection—indeed, his list includes nearly all of the most famous ladies of the fourteenth, fifteenth and sixteenth centuries, beginning with Giovanna I. of Naples and ending with Bianca Capello. He gives a chapter to each, and properly brings out the details of the feminine side of life, its occupations and amusements, and gorgeous apparel. One tires a little at times of the descriptions of pageants, and longs for a canvas of Carpaccio or of Veronese; but pageants were an indispensable element in the Italian Renaissance, the natural expression of its pride and love of magnificence, as well as of its determination to live to the utmost to-day, "for to-morrow we die." And so these dazzling displays are proper material for the chronicler. But the question is, of course, how clear and life-like is Mr. Hare's portraiture, and to this we may answer that, without being first-rate, it is usually good. He does get at the essential traits of most of these ladies—he uses the word in its aristocratic meaning—he writes enthusiastically and communicates his enthusiasm; and if he unquestionably chooses a popular method, it is perhaps the fittest for his subject.

In an introductory essay, which we find the best of all, he describes the general manner of life of the daughters of the Renaissance. Of the biographical sketches none is better than that of Giovanna I., whose vicissitudes and tragic end Mr. Hare treats sympathetically, ready to give her the benefit of the doubt in each crisis, and happily comparing her to Mary Queen of Scots. Similar elements of misfortune and similar suspicions of guilt overshadowed both queens; it would be curious to show why Scottish Mary is one of the few historic personages known to everybody, while Neapolitan Joan is hardly more than a name. Of the other women conspicuous in politics, none of Mr. Hare's group equals Caterina Sforza, who, had she acted on a larger stage, might have proved herself the peer of Catharine of Russia or of Maria Theresa. As it is, she is the best epitome of the masterful qualities of Renaissance womanhood. Bianca Capello, on the other hand, was simply one of those women who, by their beauty or sexual magnetism, have turned the heads of rulers in every age. Her story, like Caterina Cornaro's, is woven of romantic episodes which novelists and playwrights would scarcely dare to invent.

Mr. Hare writes also of the three Lombard ladies, Beatrice and Isabella d'Este and Bianca Maria Sforza; of Lucrezia Borgia, whose inherent commonplaceness asserted itself after she quitted the horrible environment of Rome; of Vittoria Colonna, who was learned but not pedantic, pious but not priggish, poetic but not sentimental; and he closes his series with an account of Elisabetta Gonzaga, Duchess of Urbino, at whose court the culture of the Renaissance blossomed most delightfully. That court may well be regarded as the prototype of the *salons* which French ladies presided over in the last century. Duchess Elizabeth had the art of drawing to Urbino the most interesting persons of her time, and of making each shine at his brightest. What conversations she called out! What friendships she cemented! Mr. Hare wisely borrows many passages from Castiglione's 'Courtier,' in order to revivify the Duchess and her companions; wisely, too, he brings his work to an end with them. For the mission of civilization is to produce men and women of high breeding and true culture; and the civilization of the Renaissance culminated with Elizabeth of Urbino and her friends.

We cannot overlook two defects in Mr. Hare's book, namely, typographical inaccuracy and a tendency to florid writing. The Italian proper names are often misspelt—in the course of four pages (198-202) we find Asolani for Asolana, Pruli for Priuli, Giralomo for Girolamo, Aignadella for Agnadello, and Palazza for Palazzo—and there is some uncertainty in dates. Sentimental reflections and moralizing also might be pruned without impairing the popular style in which Mr. Hare works.

Miss Ella Noyes, whose name is new to us, has scored a success in 'The Story of Ferrara.' She has a remarkable talent for narrative, which enables her to tell the history of the little Ferrarese state with the charm of a good romancer; but she does not sacrifice historical accuracy to the picturesque. In the course of a little more than half the volume, she has described the four centuries of growth, from the bloody turmoil out of which the family of Este emerged, to the extinction of their line and the collapse of their duchy in 1597. The tragedies, the romances, the political intrigues, the interaction between the despots and the people, are clearly set forth. Excellent are the descriptions of the chief personages—of Borso and old Ercole, of the two Alfonsos, Lucrezia Borgia, and Renata, of Bojardo, Ariosto and the Tassos. We get a vivid impression, though it be only a glimpse, of the young Savonarola, Ferrara's most famous son, and of Calvin, who found refuge there two generations later. Miss Noyes displays her judicial temper in writing about Torquato Tasso, and we commend her disentanglement of fact from legend in the career of that unfortunate and overwrought poet. So, too, her account of Renata's Huguenot leanings are more accurate than Mr. Hare's.

She has, further, a grasp on the general conditions of the duchy and its relations to the outside world, from age to age. She lets us see the life of the people not less than the pageants and pleasaunces of the princes. And she has reflected to some purpose on the deeper meaning of the Renaissance, as this single quotation will show:

"It is difficult," she says, speaking of the piety of Ercole I., "to credit the sincerity of a faith which had so little influence upon conduct. Yet there can be little doubt that the religious feeling of this prince, who had not scrupled to attempt to murder his nephew and had beheaded him later without mercy, was quite genuine. The Italians, steeped in the revived spirit of antiquity, seem to have returned to the old natural worship of their land, and, under the names of the Christian God and the Christian heroes, to have bowed themselves before those more ancient divinities, who not only deified man's virtues, but his vices and weaknesses also, and who themselves stood with him on this side of the veil of the unknown" (p. 142).

As the volumes in this series are planned not only to give a history but to serve as guides to the buildings and art of each city, Miss Noyes devotes the last part of her book to a description of Ferrara to-day, including a helpful chapter on its

paintings. Intelligence and taste stamp her writing throughout. There are many illustrations, maps, plans, and genealogical tables. One regrets that the publishers have chosen for this series a light gray binding, on which neither the gilt title nor the tooling shows. As well have no title and ornamentation as to waste them in this fashion.

Just what class of persons Mr. Zacher means to address in his little book on 'Venice as an Art City' we cannot imagine. His information is mostly of that kind which guides shout through a megaphone to personally conducted parties. He insists on prescribing what emotion we shall feel—usually a "mingled" one—before each picture and building. Confounding the Three Inquisitors of State with the officials of the Holy Office, he tells us that "the Doge upon his throne became nothing more than a prisoner of the Inquisition" (p. 38)! So much for his historical knowledge. He supposes that the ring which the fisherman brings the Doge, in Paris Bordone's picture, is the ring with which the marriage of the Adriatic had been performed. So much for his acquaintance with Venetian legends. He regards Tintoret's "Fall of Man" and "Mercury and the Graces" as Titianesque, which is exactly what they are not. So much for his art connoisseurship. "And then," he exclaims on page 81, "the explorer of the Grand Canal holds his breath! For we are in the presence of the fairest gem of all—the *Cà d'Oro*, a vision of something *between fairy confectionery and dainty filigree-work.*" So much for his taste. He leaves us "with senses exalted and pulses quickened by this riot of color." So much for his emotions. Seriously, how can work of this sort be dignified by admission into a useful series?

The Wampum Library of American Literature. Edited by Brander Matthews, Litt. D. Longmans, Green & Co. 1904.

This collection is planned to include "a series of uniform volumes, each of which shall deal with the development of a single literary species, tracing the evolution of this definite form here in the United States, and presenting in chronological sequence typical examples chosen from the writings of American authors." The editors of the several volumes are to provide critical introductions, outlining the evolution of the form under consideration, "in the literature of the world." To insure a "satisfactory perspective," no selections have been made from any living American writer whose birth occurred later than 1850. The volumes now published comprise selections of "American Short Stories," "American Literary Criticism," and "American Familiar Verse." The editor of the first is Charles Sears Baldwin; of the second, William Morton Payne; of the third, Professor Matthews.

Of the three, the last is, we think, most successful. "Familiar Verse" includes *vers de société*, but also a wider field. Any short poem, dealing successfully with its subject with sentiment, taste, humor, and a light touch, will answer. There are not too many of them in the language, and of course most of those given are old friends. Lowell's "Auf Wiedersehen," Bret Harte's "Her Letter," and several of Holmes's best-known poems fall within the category. Mr. Matthews's introductory essay hits the right note.

The volume of Short Stories is not so satisfactory. The editor says frankly that he has not tried to collect the best American short stories, but to "exhibit a development." But why should not the best short stories exhibit the development of the short story quite as much as the best *vers de société* illustrate the development of that branch of poetic art? Apparently because the editor's theory is that the real short story was hardly matured before 1850; he says that the "dramatic concentration" which is the essence of it was "extremely rare before 1835," and "not common before 1870." He has been obliged, therefore, to trace the genesis of the short story "from inchoate tales," but not allowed to give us the true flower of the species. Several of the specimens we agree with the editor in thinking types to be avoided—for instance, the labored "Peter Rugg" of William Austin, which may be worth recurring to as a curiosity and as showing that the supernatural was in the air before the appearance of Hawthorne and Poe, but has no germ of immortality in it. Rip Van Winkle we are allowed, but apparently under protest, and we get only one of Hawthorne's short stories, "The White Old Maid," and even in Poe's case there is nothing but "The Fall of the House of Usher," a very good specimen of the author, but hardly enough of itself to prove the editor's case for him—that Poe invented the short story.

The fact is, that the editor is carried away by a phrase. He may himself have some type of short story in mind, in which everything is sacrificed to directness of narration, to unity; and his theory is so much in vogue that we are perhaps called upon to admit that the type represents a desirable sort of neo-classicism. But when we find that great masters like Hawthorne and Irving have written tales which have taken hold of the affections of mankind, in complete disregard of any theory, we cannot but think that much of the current talk about "short stories" nowadays is at least as doctrinaire as what was once considered absolutely conclusive as to "dramatic unities." Practically what makes fiction live is its appeal to the human heart; and while we by no means deprecate the interest of discussions about forms and types, it still remains true that no mastery of the principles of construction ever put life into any story. Logically, if such critical principles are correct, they can be applied to one species of fiction as well as another, and we ought to insist on this being a true type of "novel." We are perfectly satisfied to call 'Tom Jones' and 'Evelina' and 'The Moonstone' all novels, though in principles of construction they do not resemble each other at all. So we fancy that the 'Mosses from an Old Manse' and 'Twice Told Tales' will pass for the best sort of short stories long after the controversy over what a true "short story" is shall have been utterly forgotten.

To turn to the last volume, Mr. Payne has contributed an interesting introduction on American literary criticism, pointing out successive phases through which it has passed, and giving specimens of Poe, Emerson, Lowell, Howells, James, and others. When all is said, however, it looks very much as if the phases were those of our literature itself, and as if criticism had meant to each new critic pretty much what he pleased. No doubt we have passed, within a century, quite beyond the old theory of hard and fast canons of taste and judgment, and we all know, or may know if we wish, how to apply the Taine method or the Sainte-Beuve method to the "Transcendental School," or to Hawthorne, or to Cooper's novels; but are we really any more at one as to the function of art or criticism than we were when Poe became an editor, or when Lowell wrote the 'Fable for Critics'? It was all a rather bewildering chaos, even before Walt Whitman appeared. If we were to hazard a guess, we should be inclined to think that the progress of democracy had made criticism everywhere a highly eclectic species of literature, in which what was wanted was not so much balance, measure, and judgment, as some new and catching theory. Reading one after another of these specimens, we are inclined to exclaim, "What is truth?" when we are recalled to ourselves by recollecting that, according to more than one master, criticism has nothing whatever to do with Truth.

Porcelain. By Edward Dillon, M.A. London: Methuen & Co.; New York: G. P. Putnam's Sons. 1904. Pp. xxxv., 420.

This book is a very large octavo volume, printed on soft and light paper, and therefore, in spite of its size, not unpleasant to hold in the hand. It is illustrated by 49 inserted plates (many of them in full color), but these serve rather as adornments than to help the inquiry, for seldom is reference made to them, and the text flows on without concerning itself with illustration of any sort. This failure to utilize the plates to their full value has to do with a certain weakness in the book of which we speak below. But first it seems desirable to explain what a twentieth-century treatise on porcelain must needs aspire to be.

A definition of porcelain can be given in the brief words of a dictionary and in the short paragraph of a popular encyclopædia; but the full explanation of what it is and exactly how it differs from other ceramic wares is difficult, because uncertain. One student may call that ware a porcelain which another would refuse utterly to put into that class. This condition of things seems to point to a certain inadequacy in the dictionary definition, as imagined above. After you have read the most carefully worded definition there is, you will still be open to suggestions from another authority, who will tell you, with reasons to back him, that you have not in the definition as printed all that there is to be said, even in the way of definition. This uncertainty is increased by the unwillingness of potters at all times to reveal the secrets of their manufacture. Ingredients and processes alike are often impossible to fix with certainty, and many things stated in the most authoritative books as fact are inferences rather than the results of positive knowledge.

The history of porcelain, too, cannot be perfectly written, because of our still inadequate knowledge of the Chinese records; and perhaps those records, when found, will be inadequate. The day has long since passed when the collector of those delicate wares could talk boldly of the epoch and the

place of manufacture of each one of his treasures. The collectors, and the dealers too, have got so far as to know how little they know. And yet there remains something of the old feeling that the traditions of the auction room and the bric-à-brac shop must have something behind them; and it cannot be got out of the mind of one who has for some years frequented those haunts of misinformation, that, after all, his blue-and-white is of the fifteenth century A. D., and his plain white of the sixteenth, and his *aubergine* of the fourteenth. And it is in China that the history of porcelain is to be found. The Japanese work is not ancient, or at least, in Japan, porcelain was not greatly prosperous or greatly in favor in ancient times. The admirable record of Japan in ceramic art does not include the work of the porcelain-maker until an epoch so recent that one hesitates to name it.

The porcelain of other countries of the Far East is hardly known to us, and appears to have been always rare and of minor importance. The west of Asia knew not porcelain; and as for Europe, the ware has been made only since Böttger's time, which we may set with Mr. Dillon at 1709-16, those being the years during which his experiments reached from a feeble to a complete realization of a ware as hard and as nearly translucent as Chinese porcelain, though immeasurably less beautiful and less perfectly decorated. The eighteenth century is the period of European porcelain, its development and its introduction into many lands. It happens, also, that our European eighteenth century was nearly conterminous with the period of greatest brilliancy and splendor in Chinese porcelain decoration. Therefore one who takes that period, during which the Dutch were bringing quantities of Eastern ware to Europe, and studies what is in that way fixed as to its date by its being preserved in private and public collections all over Europe, and studies at the same time the Chinese records and what is known to us of the work in Japan, will indeed reach the conclusion that to know the eighteenth century is to know all that is worth while knowing.

It seems as if Mr. Dillon had some such opinion. But in truth the lovers of Eastern wares have their own standard of beauty. For the student, in short, of Oriental art in the true sense, the eighteenth century of our era is a time of decadence. There are always fine things in a time of decadence, but still the tendency is away from the best make and the best design; and then of the wares which the Oriental student knows to be the best, there are so very few pieces, and those few so inaccessible, that he is driven, in despair, almost to say that the as yet unexplored early times may remain unexplored for him—that he will accept the eighteenth century as embodying the history of porcelain. But even in the eighteenth century he is stopped at every second step onward by complete uncertainty as to how a certain color was produced, and as to what is the Chinese written character for its name; he will be left in doubt as to the identification of certain decorative effects of great importance named, and even described, in the written history of the ware. He will remain so completely at sea that his book will be half made up of expressions of his own doubts and of the warring opinions of authorities whom he is compelled to cite.

If, then, we take up this book of Mr. Dillon's, we shall look first to see whether any new source of knowledge has been discovered, and we shall find that there is no such source of knowledge. Next we shall look for an array of previously ascertained facts and previously stated opinions, and here we shall find ourselves somewhat better off. An immense labor in the way of compilation, a prodigious industry, are made manifest by this array of facts and opinions. Unfortunately, however, they are poorly marshalled. The text is full of references to an unnamed page below where so and so will be made clear, and to an unnamed page above where it has already been treated; much of the essential matter is put into footnotes; the difficult points are evaded lightly and carelessly, as by simple reference to some book often wholly inaccessible to the majority of readers; there is constant reference to potteries of different kinds altogether unlike porcelain, and which are not carefully distinguished, so that the reader not carefully trained to discriminate will think that he is reading about the avowed subject of this book while in reality it is stoneware or Kutani ware that is in question. The technical terms are introduced cursorily, as it were, without definition when they first appear, and with explanation long afterwards when the reader has perhaps tired himself with wondering what their significance is; the description of a given process is very often imperfect, as in the case of the wholly incomprehensible account of casting in the manufacture of porcelain. In short, he only can make much use of this work who is prepared to read it through carefully, and to make his own cross-references on the margin, and in this way subdue it to his needs. There is a quite immeasurable amount of valuable information here, and generally a just and even a sagacious treatment of the separate decorations, the separate manufacturers, the distinct varieties of the beautiful ware. But the index, though tolerably full (fifteen pages), cannot alone suffice to untangle the maze of the author's thought.

The book can hardly be considered as "brought down to date," for there is nothing whatever about American attempts at making porcelain; and again, the very important renaissance of the Sèvres manufacture after that decline and that threatened abolition of the works spoken of on pages 312, 313, is not even mentioned. But this revival has been the theme of much discussion, and is really important, involving the introduction of makes of real porcelain which are not alluded to in the volume, and a very successful revival of the beautiful *porcelaine à pâte tendre* of the eighteenth century.

Cambridge and its Story. By Charles William Stubbs, D.D., Dean of Ely. London: J. M. Dent & Co.; New York: ~~Macmillan~~ Dutton. 1904.

The early beginnings of Cambridge, in the pre-Norman days, when it was still Grantabridge, were long shrouded in myth. Lydgate, the fourteenth-century poet, with more imagination than historical sense, maintained the agreeable fiction that Anaximander and Anaxagoras (specially synchronized for his purpose) were imported from Athens by a Spanish prince, and received from a British king the salaries of Cambridge professors. There is a certain unconscious symbolism in this legend, which forecasts the chief interests of Cambridge as divided between physical science and the more speculative exercise of pure reason. But it was actually to a monastic inspiration that the university owed its first foundation. The Franciscans chose the town because it was already a centre of trade, the most important in East Anglia. The famous "Backs" that lie behind the colleges on the river bank were, in the fourteenth century and later, a string of wharves, and the gradual conversion of the business quarter into college lawns and gardens was no doubt one of the sources of the undying estrangement between "town and gown."

The Dean of Ely attempts no competition with the larger architectural and general histories of Cambridge, but he has produced the best short history of the colleges from the foundation of Peterhouse, in 1284, to the opening of Downing College, less than a century ago. From the first it is the story of the gradual casting off of monkish tradition. The Bishop of Ely, who founded Peterhouse, took as his model Merton College, Oxford, which first threw off monastic rule by providing for students whose aim should be study rather than the religious life. The monks, they said politely, were overgood. The worldly outsider feared to send his son to the University lest he should be induced to take monastic vows. How gradual the secularization really was may be gathered from the University's attitude to the New Learning of the fifteenth century. Her young scholars were still "drowned in the dregges of divinite" when Cambridge, a trifle jealous as usual of Oxford, where Colet and Grocyn were giving their famous lectures, decided to propitiate the new spirit. To this end they founded a divinity professorship which should aim at teaching pulpit eloquence!—for the English mind is hardly the soil for a Renaissance whose ideal is purely æsthetic. "An increase of a knowledge of the Bible," says Dr. Stubbs, "they thought worth working for, not the elegancies of an accurate Latin style. It was not until the little group of Hellenists—Erasmus, Linacre, Grocyn, and Colet—had shown the value of Greek thought as an interpreter of the New Testament, that any enthusiasm for the New Learning could be awakened in England."

It was through the generosity of women that some of the finest of the Cambridge colleges came into being. Clare, next in age to Peterhouse, was the memorial of a private sorrow. In 1338 Lady Clare endowed Clare Hall with the fortune that had come to her through the death of her brother, "in order," as she quaintly set forth in the preamble to the statutes, "that the Pearl of Great Price, Knowledge, may not lie hid beneath a bushel, but, by being published, give light to those who walk in the dark paths of ignorance." In 1348 Lord Pembroke's widow founded Pembroke.

It is partly owing to the influence of Wycliffe that the Puritan Reformation is associated with the East of England. "Cambridge," it was said, "bred the founders of the English Reformation, and Oxford burnt

them." Emmanuel College, founded in 1584 by Queen Elizabeth's chancellor, was a stronghold of Puritanism. "I hear, Sir Walter," said Elizabeth to Mildmay, the founder, "you have been erecting a Puritan foundation." "No, madam," he replied; "far be it from me to countenance anything contrary to your established laws; but I have set an acorn which, when it becomes an oak, God alone knows what will be the fruit therefrom." One of the fruits was John Harvard, "a Puritan, indeed, but of that fuller and manlier type which was characteristic of the Elizabethan age, rather than of the narrower, more contentious, more pedantic order which set in with and was hardened and intensified by the arbitrary provocations of the Stuart régime." Meanwhile, though with the passing of the centuries, college after college "rose into towers," Cambridge was not yet, as she is to-day, merely a university town, but a centre still of commercial activity. It is said that when, in the seventeenth century, Bunyan drew his picture of Vanity Fair, he took for his model the October Fair at Cambridge, which about that time boasted itself the largest in Europe.

We note with interest that in early days the University let the students shift for themselves in the matter of accommodation. When a mediæval benefactor founded a college, his object was to provide *not for students, but for teachers.* But this was in an age when students were not regarded as a source of revenue, the customers of a college, while the learning of the faculty is the stock in trade.

"Pray at King's," said King James, as he gazed at Cambridge with the eye of an epicure; "dine at Trinity, and study and sleep at Jesus." Mr. Herbert Railton's drawings in the luxurious quarto edition before us will remind every Cambridge man in what a beautiful setting he was privileged to spend his student years. The full-page illustrations are auto-lithographs, faintly colored, all charming; but to the eye familiar with Cambridge they fail by lack of realism. There is too much prettiness, too much softening of outline, too little austerity. They are like the highly idealized portrait of a face one knows and loves; one admires, but one wishes it were more like. As a whole, however, text and illustrations together, the volume cannot fail to charm.

An Inquiry into the Nature and Causes of the Wealth of Nations. By Adam Smith. Edited, with an introduction, notes, marginal summary, and enlarged index, by Edwin Cannan. London: Methuen & Co.; New York: G. P. Putnam's Sons.

Editions of the 'Wealth of Nations' there are in plenty, but students have for many years felt the need of one that should have some claim to be considered the standard edition, at least for one generation of economists. From Playfair to Nicholson, Adam Smith's editors invariably laid themselves open to the charge of using the 'Wealth of Nations' "as a mere clothes line upon which to hang editorial opinions on economic theory," and often very poor opinions at that. Modern students have had to depend upon the editions of McCulloch, Rogers, and Nicholson; but McCulloch's editorial sins are now notorious, the notes and comments by Rogers are often ridiculous, while Nicholson's edition, although helpful for some purposes, is far from being what the student wants. With all the attention that has been paid to the history of economic thought in recent years, it is not a little strange that the demand for a serviceable edition of the 'Wealth of Nations' has gone so long unsatisfied.

Mr. Cannan's brilliant exploit in discovering and editing so admirably Smith's 'Lectures on Justice, Police, Revenue, and Arms' marked him long ago as the proper person to prepare a standard edition of the 'Wealth of Nations'; and it is a matter for congratulation that he has at length accomplished the task. Although he has, as readers of his other works know, no lack of opinions of his own, Mr. Cannan has confined himself to the task of an intelligent and conscientious editor. He has undertaken to give us a satisfactory text of Smith's masterpiece, and has provided such critical and explanatory notes as the careful student requires; with his author's opinions, as opinions, he manifests the slightest concern. He has selected, wisely, the text of the fifth edition, the last one brought out during the life of Smith. With this he has carefully compared the first edition; and, wherever changes were found, has traced the history of each alteration through the intermediate editions. The results of this study are presented in numerous footnotes, and are well worth the labor which they must have cost. Even where the changes are trivial, it is satisfactory to be able to determine this fact for one's self rather than to have to take the word even of a competent editor.

The editor's own notes deal chiefly with the sources from which Adam Smith drew his information. Dr. Bonar's 'Catalogue of the Library of Adam Smith,' published a decade ago, and Smith's 'Lectures,' throw a great deal of light upon this subject; and Mr. Cannan is able to reproduce many parallel passages from earlier works with which Smith was certainly or probably familiar. In this he has laid his readers under heavy obligations, even though some of the quotations do not have as much significance as he seems to attach to them. We do not as yet know enough about the economic thought of the seventeenth or eighteenth century to enable us to trace to its various sources the common stock of ideas upon which Smith and his immediate predecessors drew. Mr. Cannan suggests, for instance, that it was "probably" a passage in Mandeville's 'Fable of the Bees' that suggested to Smith the expression "division of labor"; but this topic had been discussed by so many earlier writers that "probably" seems altogether too strong a term to use. Yet in this case, as elsewhere, Mr. Cannan's suggestions are interesting and worthy of consideration even when they do not carry instant conviction.

His introductory remarks do not exceed in length some thirty-six pages. After describing the various editions of the 'Wealth of Nations,' he passes on to the ever-interesting question of its genesis. The publication of the 'Lectures on Justice, Police, Revenue, and Arms' placed many things beyond further controversy; and we are now able to estimate correctly Smith's indebtedness to Hutchinson, Hume, Harris, and others, and have only ourselves to blame if we overestimate the influence which the Physiocrats exercised upon him. Of all this Mr. Cannan gives an excellent account, but he hardly improves upon what he said in his introduction to the 'Lectures.' He now seems, however, to estimate more highly than formerly the influence of Mandeville. The sensible conclusion which he reaches is worth quoting *in extenso:*

" 'The Wealth of Nations' was not written hastily with the impressions of recent reading still vivid upon the author's brain. Its composition was spread over at least the twenty-seven years from 1749 to 1776. During that period, economic ideas crossed and recrossed the Channel many times, and it is useless as it is invidious to dispute about the relative shares of Great Britain and France in the progress effected. To go further and attempt to apportion the merit between different authors is like standing on some beach and discussing whether this or that particular wave had most to do with the rising tide."

Mr. Cannan has done his work so well that we now have what is likely to remain for some time the standard edition of the 'Wealth of Nations.' The publishers, however, have hardly met the editor half way. The print is too fine, and the book is made of inferior paper which tears at the slightest provocation. The work is one which the most diligent student will hardly master at a single sitting, and should have been given a dress that would enable it to outlast two or even three sessions. It should be observed, finally, that the editor has provided a most satisfactory index which seems to meet all possible requirements.

Far and Near. By John Burroughs. Boston: Houghton, Mifflin & Co. 1904. Crown 8vo, pp. viii., 288.

The lovers of John Burroughs's sketches of wood and wild will be glad to possess this reprint, in convenient form, of a number of papers printed by him during the last four years and hitherto not gathered together. The most extended of them is the narrative of the Harriman expedition to Alaska, included by courtesy of the patron of the expedition and Doubleday, Page & Co., who published it in 1901, with other records of the expedition. Seven other briefer papers follow, which saw the light first in various periodicals.

To these, under the title of "A Lost February," is added the hitherto unprinted record of a month's experience in Jamaica, whither the author had fled to avoid the asperities of a northern winter's end. This record has a special interest as being one of the few descriptions of the tropics which, after duly noticing the attractions, the unfamiliar life (human and other), the cordial hospitality of the local residents, and the balmy languor of the climate, tells also of the other side. Almost every thinking native of the north temperate zone, on visiting the tropics, has felt what Burroughs here frankly states about the land "cursed with perpetual summer," the distances "far enough" or "not too far," the scourge of insects, the repugnant vegetation, tepid drinking water, and shiftless, unmoral population of the lower classes. The songbirds of the north lose their voices during their southward migration; there is nothing in the blossoms of the tropics, taken in the mass, to compare with the flowery hillsides

of the north; the vaunted fruits of the tropics are, for the most part, insipid or mawkish beside those of the temperate zone; and of the few of which this criticism is not true, as the orange and pineapple, the finest are those grown nearest to the northern limits of the tropics. The woods are uninteresting, thorny, dusty, spiny, reeking with minute ticks; the foliage "varnished with the heat," or, more scientifically, as a protection against the heat; the palms and bananas yielding their effect of grace much the best at a considerable distance.

We have heard not a little of the unfortunate economic conditions of the Antilles, which, as usual, is laid to the disinclination of the colored people to work for employers. An interesting side light on the matter is thrown by the following observations of the author:

"The burden of taxation in the island is excessive, and kills all native enterprise. If a new industry starts, it is taxed out of existence—I was told of several which had been thus killed. They literally tax the wheels off the wagons, the tax being about five dollars a wheel. A man is afraid to make any improvement about his house, . . . lest his taxes be increased. I heard of an American who took an automobile there to make a tour of the island, but the sum demanded by the authorities before they would allow him to land it—something over a hundred dollars—was so great that he went back home with it on the steamer's return trip. Hence I say that the tax-gatherer is the incubus that weighs down Jamaica. The people are excessively taxed, largely to pay big salaries to the tax-gatherers."

Some Americans may see a lesson for us in this.

A Belle of the Fifties: Social and Political Life in Washington and the South, 1853-66. Edited by Ada Sterling. Doubleday, Page & Co.

The memoirs of Mrs. Clay, wife of the former United States Senator from Alabama, belong in more than their historical reminiscences to a far remote past. Travellers in the ante-bellum South were wont to remark upon the eighteenth-century character of such literary tastes as were encouraged; the leisurely and cultivated classes being much more at home with the English writers of the days of Queen Anne and the Georges than of the Victorian century. Especially is this taste shown in the romantic phrases which were employed with regard to women, who were mostly looked upon as of a celestial nature, and needing for their perfection only a few ornamental studies, a little music, a modicum of painting, and perhaps some skill in cooking, and were particularly admonished against the vulgarizing pursuits of the masculine mind, such as the so-called useful and learned arts and sciences. That atmosphere is strongly reflected in these memories of the domination of the national capital by the South. The statesmen and men of wit and eloquence here noted are chiefly from the slave States or wholly from among their partisans; and the brilliancy of the Administrations of Pierce and Buchanan, both in their public aims and their social quality, is disdainfully contrasted with the new era of Northern rule, of which rumor bore strange tales to the Southern ladies who retreated before the approaching storm of war—tales over which they sighed as over a fallen world.

The portions of the book which deal with the period before secession are largely recollections of showy festivities at which gallant men showered compliments upon lovely and beautiful women; but when the solemn tragedy of the war had swept into Southern homes, there enters into the memoirs a more pathetic and serious temper, albeit still characterized by the scorn of Northern men and ideas. Senator Clay's estate at Huntsville, Ala., was wasted and his family impoverished, and when Lincoln was assassinated, accusations were made of Mr. Clay's complicity in the plot, whereupon he gave himself up to the national authorities, and was for a long period subjected to the hardships and indignities which befell his friend the late President of the Confederacy, in Fortress Monroe. That both these prisoners were the victims of the fierce and somewhat unreasoning resentment which followed Lincoln's death, there can be no question; and one of the most interesting parts of the narrative is Mrs. Clay's accounts of her various stormy interviews with President Johnson and Secretary Stanton, the former of whom she found sufficiently kindly but timid, and in mortal fear of Stanton, for whom our author has only words of anger. Mr. Solicitor Holt is also accused of manifold crimes of injustice and contempt of legal methods in his persecution of all whom he suspected of a conspicuous part in the assassination.

THE DIVINE FIRE

"We venture to count the hero already among the memorable figures in romance, a great character . . . breathlessly interesting . . . It is not what is said or done on one page of this novel, but what is said or done on them all, that lifts this poet into reality. Here is a novel which it is a pleasure to praise."—*N. Y. Tribune.*

THOMAS NELSON PAGE'S New Book, Published November 30

THE NEGRO: The Southerner's Problem

CONTENTS
Slavery and the old Relation between the Southern Whites and Blacks
Some of the Difficulties and Fallacies
Its Present Condition and Aspect, as Shown by Statistics
The Lynching of Negroes—Its Cause and Its Prevention
The Partial Disfranchisement of the Negro
The Old-Time Negro
The Race Question
Of the Solution of the Question

Presenting a Conservative Southerner's Views on the Present Relations of the Two Races in the South, with an Account of the Steps by which these Relations Have Come About

To the great value and interest of the work in itself much is added by the author's pre-eminence as the sympathetic depicter, the historian, as it were, of the old relation between master and slave, and of the mistakes that have been made since the war; in short, this book presents the matured opinions to-day of the author of "Marse Chan."

12mo, $1.25 net. (Postage 13 cents.)

The Strategy of Great Railroads

By FRANK H. SPEARMAN

The *Wall Street Journal* says:

"The volume helps to fill an important blank in the library of railroad literature . . . In his description of the engineering and executive difficulties faced by the various managements the author is particularly happy, and his remarks on such points are of a practical, careful character."

With nine maps, $1.50 net. (Postage 14 cents.)

NEW VOLUME OF "LITERARY LIVES"

John Bunyan

By W. HALE WHITE

Fully illustrated. 12mo, $1.00 net. (Postage, 10 cents.)

CONTENTS.

The Life and "Grace Abounding"
The Preacher
"The Pilgrim's Progress"
The "Holy War"
The "Life and Death of Mr. Badman"
Some Reflections on Bunyan and Puritanism.

"Has really smelled the smoke of battle."—*Boston Advertiser.*

With Kuroki in Manchuria

By FREDERICK PALMER

The *Pall Mall Gazette* says:

"His impetuosity and élan carry all before them. . . . The battle of the Yalu, the first and second attacks on the Motien Pass, and the battles of Tensuiten and Liao-Yang are described with a sort of cheery realism that probably unconsciously reflects the spirit of the Japanese troops faithfully. . . . Mr. Palmer is an impressionist. In chapter after chapter the tragic Manchurian orgie lives again; and the reader is hurried along in spite of himself."

With 24 field photographs and maps. $1.50 net. (Postage 14 cents.)

"SURELY A SUBJECT FOR SERIOUS LITERARY DISCUSSION."—*New York Times Saturday Review.*

THE GOLDEN BOWL

By HENRY JAMES

Two Volumes, $2.50.

Referring, in a letter, to his new book, "The Golden Bowl," Mr. James himself says of it:

"It is distinctly, in my view, the most done of my productions, the most composed and constructed and completed, and it proved, during long months, while it got itself step by step endowed with logical life, only too deep and abysmal an artistic trap. By which I don't mean an abyss without a bottom, but a shaft sunk to the real basis of the subject which was a real feat in engineering. I hold the thing the *solidest*, as yet, of my fictions."

THE UNDERCURRENT **By ROBERT GRANT**
"The most important American novel of the year."—*Holyoke Transcript.* Illustrated. $1.50.

EMMANUEL BURDEN, MERCHANT **By HILAIRE BELLOC**
A novel that made a sensation in England. Illustrated by G. K. Chesterton. $1.50.

CHRISTMAS EVE ON LONESOME **By JOHN FOX, JR.**
Six of the best short stories ever written by any modern author."—*Newark Advertiser.* Illustrated in colors. $1.50.

DIALSTONE LANE **By W. W. JACOBS**
"One of those spontaneously funny stories which only a born humorist could write."—*New York Tribune.* Illustrated, $1.50.

THE LAST HOPE **By HENRY SETON MERRIMAN**
"Might be called the author's masterpiece."—*New York Evening Sun.* Illustrated, $1.50.

THE SOLDIER OF THE VALLEY **By NELSON LLOYD**
"Would be difficult to find anywhere in recent fiction a novel that is so vivid and graphic a picture of life."—*Brooklyn Eagle.* Illustrated by A. B. Frost. $1.50.

THE FOOD OF THE GODS **By H. G. WELLS**
"A remarkably diverting fancy, to the spell of which it is as easy as it is pleasant to yield."—*New York Tribune.*

Great Englishmen of the 16th Century

CONTENTS

The Renaissance of England
Sir Thomas More
Sir Philip Sidney
Sir Walter Raleigh
Edmund Spenser
Francis Bacon
Shakespeare's Life
Shakespeare's Work

By SIDNEY LEE. With six portraits. $1.75 net.

(Postage, 16 cents.)

"Mr. Lee walks clear-eyed and serene the broad highway, faithfully and critically recording his observations"—*The N. Y. Globe.*

"The fine critical ability credited to Sidney Lee was never more conspicuously in evidence than in his 'Great Englishmen of the Sixteenth Century.' . . . Clear-eyed and incisive like the lines of an etching are the biographical studies of the various personages. There is just sufficient of historic surroundings to act as a background. It is the temperament of the man to which the greatest attention is given."—*New York Times Saturday Review.*

READY DECEMBER 10

The Story of Art Throughout the Ages

An Illustrated Record.

By SALOMON REINACH.

The translation by Florence Simmons. With 600 miniature reproductions of famous works mentioned in the text. $2.00 net. (Postage extra)

A work which is remarkable scarcely more for its mastery of the subject than for its lucid, terse and piquant style, and which is destined to recognition as a standard. M. Reinach has a genius for selection and co-ordination, and the work may be termed a masterpiece of condensation. While addressed to the amateur, the student will find his needs cared for.

The Temper of the 17th Century in English Literature

(Clark Lectures given at Trinity College, Cambridge, 1902-1903.)

By BARRETT WENDELL, Professor of English at Harvard College.

CONTENTS

Elizabethan Literature

The Bible and Bacon
The Development of Prose
Raleigh, Burton, and Browne
The Earlier Puritanism
The Later Puritanism
Milton Before the Civil Wars
The Maturity of Milton
The Age of Dryden

The New York Evening Post says:—"For their candor, justice and high ideals there can be nothing but praise, and in the grace, adequacy and dignity of their style all lovers of the inevitable word must rejoice. . . . A work which offers us with dignity and ease those wider views and considerations in which the eye ranges at large from peak to peak."

12mo, $1.50 net. (Postage 15 cents.)

The Scribner Fiction

Expedition From Pittsburg TO The Rocky Mountains

1819-1820

By order of Hon. J. C. Calhoun, Secretary of War, from Notes of Maj. G. H. Long, T. Say, and others; compiled by

EDWIN JAMES

Edited with copious notes, etc., by

REUBEN GOLD THWAITES, LL.D.

With numerous plates and folded maps.

4 vols., large 8vo, cloth, uncut, gilt tops. Price $16.00 net, express prepaid.

This official report of the most extensive expedition sent out, up to that time, by the United States government, has not hitherto been edited by modern scholarship; nor has it been published for seventy-five years.

"They were in many respects much better qualified and fitted out than Lewis and Clark; and the record of their observations and discoveries must be allowed not only to possess the interest inseparable from such a narrative, but to make highly important additions to our knowledge of the geography and natural history of the valley of the Mississippi and Missouri."—*North American Review.*

"Mr. Thwaites is the best possible editor who could have been chosen for such a task."—*The Outlook.*

"The annotations are abundant and highly valuable."—*The Nation.*

BROWN BROTHERS & CO.
NO. 59 WALL STREET, NEW YORK

LIVES OF GREAT WRITERS

IN THE DAYS OF CHAUCER The Story of His Life and Times.

By TUDOR JENKS. With an Introduction by Hamilton Wright Mabie. 12mo. Cloth. $1.00 net. (Postage 9 cents.) Already in use at Smith College and elsewhere.

Prof. FRANCIS HOVEY STODDARD, New York University, says: "I believe these books will be very useful. I shall be glad to commend 'In the Days of Chaucer' to students."

Prof. CHARLES BELL BURKE, Adelphi College, Brooklyn: "A delightful book. Popular in view, it is also scholarly, and betrays not only historical, but also fine literary appreciation. I shall recommend it as widely as possible."

DR. A. J. GEORGE, Professor of English in the Newton High School, says: "It is a great delight to read a book like Tudor Jenks' 'In the Days of Chaucer,' full of the tonic of the great poet's life and art. Pupils will read it as they read romance, and through it will be led to make a closer acquaintance with that wholesome, happy and large-hearted story teller—Chaucer."

The Outlook: "An extremely interesting piece of biographic writing in the broad sense of the word, presenting the man against the background of his time, in idea, society, taste, dress, speech and amusement, with great vividness. An initial volume in a new series of books, projected along vital lines and to be written in a vital spirit. Fresh, informal, taking. Not only the story of Chaucer's life, but a picture of the England of his time."

(*Ready next week, "In the Days of Shakespeare," by Tudor Jenks. Uniform Edition.*)

"The first complete contemporary account of De Soto's famous expedition."

NARRATIVES of THE CAREER of HERNANDO DE SOTO
From Florida to the Mississippi River.

Told by the Gentlemen of Elvas, by Biedma, and in the newly-translated account of Ranjel, De Soto's private secretary. Edited and introduced by Professor EDWARD GAYLORD BOURNE, of Yale University. In The Trail Makers Series, under the consulting editorship of Professor John Bach McMaster. 12mo. Cloth. With illustrations and maps. In two volumes, $2.00 net.

This is the first time that the wonderful story of De Soto's career and the first exploration of the South has been presented in full from the original sources. In addition to the classic histories of the Gentlemen of Elvas and De Biedma, which have not been accessible to general readers in separate form, this volume contains the indispensable narrative of Ranjel, De Soto's secretary, which is now translated for the first time for this volume by Professor Bourne. It is a contemporary day by day record of singular importance.

(*Circulars of The Trail Makers, a library of History and Exploration, on application.*)

The most notable volume of literary biography since the Life and Letters of Lowell.

RECOLLECTIONS By RICHARD HENRY STODDARD

PERSONAL AND LITERARY. Edited by Ripley Hitchcock, with an introduction by Edmund Clarence Stedman. Illustrated, $1.50 net.

"The volume is a precious one. . . . A wealth of recollections."—*Phila. Ledger.*
"His friendships he has recorded beautifully."—*N. Y. Evening Post.*

Prompt application may secure a copy of the magnificent large paper edition, limited to 200 copies, most of which have been subscribed for, extra illustrated. A superb holiday gift. In box, $7.50 net. The publishers reserve the right to increase the price.

"THE BEST SHORT LIFE OF NAPOLEON"

NAPOLEON A Short Biography.

By R. M. JOHNSTON. Lecturer in Italian History at Harvard University. Illustrated. 12mo. Cloth. $1.00 net. (Postage 10 cents.) *Used at Yale, the University of California and elsewhere.* (*Second Edition.*)

The *Nation* says: "Mr. Johnston's book is popular history of the best class—scholarly, readable, and acute. It is not only possible to read this volume, but it is difficult to deny one's self the pleasure of an uninterrupted perusal. His account of military operations is particularly clear, and many readers will be indebted to him for their first real knowledge of the tactics which were developed during the wars of the French Revolution. To all who would acquire the essential facts by the shortest possible cut, Mr. Johnston's volume can be recommended, and, unlike most short cuts, this is a safe one to take."

The London *Spectator* says: "Mr. Johnston's Napoleon is admirable. Clear and comprehensive."

THE CITIZEN A Study of the Individual and the Government.

By NATHANIEL SOUTHGATE SHALER, Professor of Geology in Harvard University, Dean of the Lawrence Scientific School. 12mo. Cloth. $1.40 net. (Postage 12 cents.) (*Second Edition.*)

"A book that will hold the attention and interest of readers of all ages."—*The Outlook.*
"Thoroughly delightful from beginning to end . . . deserves attention . . . should be a very real help."—*N. Y. Times.*

LEGENDS OF THE RHINE

By H. A. GUERBER. A contribution to the study of folklore, as well as a legendary guide to the Rhine. New edition. Net $1.50.

A HISTORY OF ART

Illustrated. Revised and enlarged edition, with chapters on Modern Art and History of Music. By **WM. H. GOODYEAR.** Royal 8vo, 412 pp., cloth. 16th Edition. Net, $2.80. **THE SAME.** Two volumes. Net, $3.00.

JOHN BUNYAN

By W. HALE WHITE

CONTENTS—The Life and "Grace Abounding." The Preacher. "The Pilgrim's Progress," The "Life and Death of Mr. Badman." The "Holy War." Some Reflections on Bunyan and Puritanism.

Illustrated. $1.00 net. (Postage extra.)

FETICHISM IN WEST AFRICA

Forty Years' Observation of Native Customs and Superstitions

By Rev. ROBERT HAMILL NASSAU, M.D., S.T.D.

"Every page he writes, from the modest preface outlining his missionary labors to the two long chapters of fetish tales at the end, is full of information and more exciting than any novel."—*N. Y. Sun.*

Illustrated 12mo, $2.50 net. (Postage 16 cents.)

THE INFERNO OF DANTE

By MARVIN R. VINCENT, D.D., LL.D.

A translation into the English ten-syllable line, without rhyme (which has a very close affinity with Dante's verse) and is at the same time an accurate and almost literal rendering of the original text without sacrificing the just claims of the laws of rhythm and accent of English verse.

12mo. $1.50 net. (Postage 15 cents).

THE GOSPEL AND THE CHURCH

By ABBÉ ALFRED LOISY

"It is a remarkable work, showing deep learning, accurate information, close reasoning."—*Bost Transcript.*

GOOD BOOKS FOR CHILDREN

HARDY'S
SEA STORIES FOR WONDER EYES

These stories answer some of the questions about sea life that puzzle children—questions that older children are often unable to answer.

CHANCE'S
LITTLE FOLKS OF MANY LANDS

Probably no other geographical reader since the appearance of the Jane Andrews books has made so favorable an impression on teachers, critics and readers.

The Jane Andrews Books

Wyss' Swiss Family Robinson

Andersen's Fairy Tales

Grimm's Fairy Tales

Defoe's Robinson Crusoe

Swift's Gulliver's Travels

Greene's Legends of King Arthur

Shaw's Stories of the Ancient Greeks

Nearly a quarter of a century ago, Messrs. Ginn & Company introduced to the school world the first supplementary reading books. To-day their list of supplementary readers and books for school libraries (including about 300 titles) is so complete that it may serve as a bibliography to the best reading for children.

"What Are Our Young People Reading?" a suggestive monograph by President L. H. Jones of the Michigan State Normal College will be sent postpaid to any address on request. It is accompanied by a catalogue of the supplementary readers issued by the publishers.

Long's Wood Folk Series

Youth's Companion Series

Strong's All the Year Round

Holden's the Sciences

Stickney's Earth and Sky

Eddy's Friends and Helpers

Gould's Mother Nature's Children

Comstock's Ways of the Six Footed

CRAMP'S
ADVENTURES OF PINOCCHIO

A juvenile classic—the best known and the best loved of all the wonder stories in Italian literature.

WILLIAMS'
SOME SUCCESSFUL AMERICANS

Short, stirring biographies of men and women who have made some definite impression on the world.

GINN & COMPANY Publishers

Boston **New York** **Chicago** **London**

A HISTORY OF SCIENCE

By HENRY SMITH WILLIAMS, B.Sc., M.D., LL.D.

Author of "The Story of Nineteenth Century Science," "The History of the Art of Writing," Editor of "The Historian's History of the World," etc., etc.

IN FIVE VOLUMES

Profusely Illustrated with Portraits of Famous Scientists, Diagrams, Facsimiles, Pictures, etc.

A HISTORY OF SCIENCE is the story of the origin and development of scientific thought, discovery, and invention from the earliest times to the present day. It traces the growth of ideas from the first vague dreamings of pre-historic man down to the precise inductions of the twentieth-century scientist in his laboratory. From this view-point the story of human progress presents the most wonderful and interesting spectacle—a chapter of man's history that has never before been written in its entirety.

The work is scientifically accurate in statement and yet devoid of all technicalities throughout. It will fascinate the general reader while commanding the respect of the most critical of students. There is no straining after the spectacular or picturesque at the expense of truth, yet so fascinating is the story in itself, so wide the opportunity for the play of the scientific imagination, that the narrative has all the charm, attraction, and compelling power of romance.

HENRY SMITH WILLIAMS, M.D., LL.D.

CONTENTS

Vol. I. **The Beginnings of Science.** Vol. II. **The Rise of Modern Science.**

Vol. III. **Modern (18th, 19th, 20th centuries) Progress of the Physical Sciences.**

TWO BEAUTIFUL BOOKS

Cambridge and Its Story

By **CHARLES WILLIAM STUBBS, D.D.,** Dean of Ely.

With 24 Lithographs and other Illustrations by HERBERT RAILTON. 4to Cloth, $8.00 *net*. Express 25 cents.

"With his whole soul the artist has responded to the appealing loveliness of ancient tower and oriel, of stately gateway and airy pinnacle, and the results are of the most satisfying nature. Dean Stubbs' recital is careful and scholarly."—N. Y. Tribune.

Oxford and Its Story

By **CECIL HEADLAM, M. A.**

With 24 Tinted Lithographs and other Drawings by HERBERT RAILTON. Uniform with the Dean of Ely's "Cambridge." 4to, $8.00 *net*. Express 25 cents.

"A noble pair of books."—N. Y. Tribune.

Sandro Botticelli

By **JULIA CARTWRIGHT,** (Mrs. Ady.)

Author of "Isabella d'Este," etc. Illustrated, 2 photogravures,—illustrations, 4to, $4.00 *net*. Express 20 cents.

The author is especially known for her work in the field of early Italian art and letters, so that she is especially at home in her monograph on Botticelli. The "get-up" of the book is most attractive, making a charming gift book.

Inner Jerusalem

By A. GOODRICH FREER,

Author of "Outer Isles." Fully illustrated, 8vo, $3.00 *net*. Postage 16 cents.

Miss Goodrich Freer writes of Jerusalem rather from the historical than the religious standpoint. She describes the Jerusalem of to-day, its various creeds and races, its inner life, Jewish, Moslem, and Christian, all of which she has had unusual opportunities for observing during a two years' stay in the Holy City, devoted entirely to the study of its life, in every aspect, opportunities which her linguistic attainments have enabled her to utilize to the utmost.

My Chinese Notebook

By LADY SUSAN TOWNLEY.

Illustrated, 8vo, $3.00 *net*. Postage 14 cents.

This book has a peculiar interest at the present time, dealing not only with the early history of China, its religions, its language, its literature, and its government, but giving also the personal impressions of the author, the wife of a well-known diplomatist, during her residence in Peking. It is written lightly, with attractive personal touches.

King Lear
The Tempest
A Midsummer Night's Dream
As You Like It
The Winter's Tale
Hamlet (two volumes)
Much Ado About Nothing
The Merchant of Venice
Twelfth Night
Love's Labour's Lost [Postage, 30 cents extra]

Royal octavo, gilt top, uncut edges. $4.00, net, per volume. Half morocco, gilt top, $5.00, net, per volume

"These monumental volumes are the admiration of every student of Shakespeare," says Dr. William Aldis Wright.

The *London Athenæum* states, "This, the most exhaustive work on Shakespeare's plays, comes from America."

Dr. J. W. Rolfe declares of a recent volume, "This, too, like its predecessors, is . . . the entire literature of the subject compressed into a single volume, and the more valuable for the editor's personal contributions thereto."

THE NEW EDITION OF CHAMBERS'S CYCLOPAEDIA OF ENGLISH LITERATURE

Conceded by every English-speaking critic in the world to be the most authoritative, comprehensive, accurate, and convenient general work of reference upon English literature in existence. It includes the whole range of English literature, from the earliest times to this day, and in all quarters of the globe.

Contains over two thousand five hundred pages, illustrated with approved portraits and drawings. There is a detailed table of contents in each volume.

Complete in three Imperial Octavo Volumes. Lavishly and accurately illustrated. Cloth, $15.00 *net*, per set; half morocco, $25.50 *net*, per set. Carriage extra.

THE TRUE HENRY CLAY

By JOSEPH M. ROGERS

Mr. Rogers had access to all the private Clay papers now in possession of the Clay family, who gave to him as well every assistance in the preparation of his work.

His book is notable for its wealth of anecdote and for its portrayal of Clay as a man. The volume contains twenty-four illustrations, most of them from photographs made especially for the work.

Illustrated. 12mo. Decorated cloth, $2.00, net; half morocco, $5.00, net. Postage, 14 cents extra.

OTHER VOLUMES IN THIS SERIES ARE:

The True George Washington. By Paul Leicester Ford.
The True William Penn. By Sydney George Fisher.
The True Benjamin Franklin. By Sydney George Fisher.
The True Thomas Jefferson. By William Eleroy Curtis.
The True Abraham Lincoln. By William Eleroy Curtis.

Uniform in style of binding and price

IVAN THE TERRIBLE

By K. WALISZEWSKI

Translated from the French by Lady Mary Loyd. 8vo. Cloth, $3.50 net.

Monsieur Waliszewski's latest contribution to the history of the mighty empire of the Tsars is perhaps more valuable than any of its predecessors. Much that may have appeared obscure in the history of Peter the Great and his successors is explained by the light—albeit an occasionally terrifying and lurid light—here cast on the labors, the aspirations, the bitter disappointments, of the great Founder of the Russian Power.

DISEASES OF SOCIETY

By G. FRANK LYDSTON, M.D.

The most direct, forceful, and outspoken study of social conditions in this country which has yet been put into print. Dr. Lydston considers not only the police criminal, the anarchist, and the sexual pervert, but also that vast number of offenders against the moral and physical laws whom the courts cannot reach. He deals with the oppression of wealth, the rights and wrongs of organized capital and labor, the negro question and the crimes which have grown out of it, and with the offences of "society" at large.

Illustrated. 8vo. Cloth, $3.00 net. Postage 17 cents extra.

MODERN INDUSTRIAL PROGRESS

By C. H. COCHRANE

Over 400 illustrations. 12mo. Decorated Cloth, $3.00 net. Postage extra.

Tells of the making of sky-scrapers, of armor-plate, of the great guns, the discovery and application of the principles of wireless telegraphy; in fact covers the whole field of industrial progress.

A DICTIONARY OF THE DRAMA

By W. DAVENPORT ADAMS

"The book will be an immense convenience, not only to contemporary writers about the stage, but to all earnest students of the literary theatre, who will find in it abundant clues to special and curious knowledge, especially concerning the characters and plays of the older drama, once famous, but long forgotten, except by the very few. No theatrical library can afford to be without it."—*N. Y. Nation.*

To be complete in two 8vo volumes of over 600 pages each. Vol. I. now ready. $3.00, net, per vol.

LITTLE, BROWN & COMPANY'S NEWEST BOOKS

ROMA BEATA

LETTERS FROM THE ETERNAL CITY

. . BY . . MAUD HOWE

The New York Tribune says:

"A clever book, and an engaging one. The author has observed Italians and Italian life with an intelligence no less sympathetic than acute. In these sketches, marked by humor, discrimination and womanly grace and gentleness, she does much to draw the reader under the spell which she herself has felt so deeply."

The Boston Herald says:

"AS THE WIFE OF JOHN ELLIOTT, THE ARTIST, AS A WOMAN OF LETTERS, AND AS A KEEN OBSERVER OF MEN AND MANNERS, NO ASPECT OF THE ROMAN KALEIDOSCOPE ESCAPED HER NOTICE, AND FOR THE POPE AND PEASANT HER COMPREHENSION AND SYMPATHIES WERE ALIKE QUICK AND READY."

Superbly illustrated from drawings by John Elliott and from photographs. Crown 8vo, gilt top in box, $2.50 net. Postpaid $2.70.

The Younger American Poets

By JESSIE B. RITTENHOUSE. With 14 portraits. 12mo, gilt top, **$1.50 net.** Postpaid **$1.65.**

Miss Rittenhouse discusses the group of poets she has chosen with discrimination and delicate phrasing, and the work is a genuine contribution to literary criticism.—*Lillian Whiting, in Louisville Courier-Journal.*

A helpful and intelligent guide to the conscientious and earnest work of the later American poets, who are discussed with a rare literary instinct and poetic feeling, as well as with generous, ungrudging appreciation.—*Baltimore American.*

The Old Masters and Their Pictures

New illustrated edition of SARAH TYTLER'S book for all art lovers. With twenty full-page illustrations in half-tone from paintings by Murillo, Andrea del Sarto, Michael Angelo, Raphael, Titian, Mantegna, Albrecht Dürer, Correggio, Tintoretto, Rembrandt, Rubens, Velasquez, and other famous painters. 12mo. Decorated cloth, gilt top, in box, $2.00.

The Intellectual Life

New Illustrated Edition of PHILIP GILBERT HAMERTON'S classic. Handsomely printed, with a portrait of the author, an etched portrait of Leonardo da Vinci, and eight half-tone portraits and views. 12mo. Decorated cloth, gilt top, in box, $1.75. Half morocco, gilt top, in box, $3.75.

Sweet Peggy

By LINNIE SARAH HARRIS

A winsome, merry love story, with a fresh, unconventional heroine.

Illustrated. 271 pages. **$1.50.**

Third Edition of Anne Warner's Popular Success

SUSAN CLEGG AND HER FRIEND MRS. LATHROP

If you have not yet made the acquaintance of the original Susan Clegg and her silent friend, Mrs. Lathrop, **you have missed a treat.** From the time Susan decides to marry—and then changes her mind—until the close of her recital of the "Minister's Vacation" the book is intensely amusing. It is *good, wholesome, hearty, homely humor, too.*

With frontispiece. 227 pages. 12mo. **$1.00.**

Painted Shadows

By RICHARD LE GALLIENNE

Finely imagined stories displaying in a high degree this talented author's charming style.

227 pages. 12mo. **$1.50.**

LIFE OF GEORGE ELIOT

New Illustrated Edition of MATHILDE BLIND'S famous biography, with new material and bibliography, by Frank Waldo, Ph.D., and G. A. Turkington, M.A. With portrait and other illustrations. 12mo. Cloth, $1.25.

"The authors who have brought the biography up to date have done their work with great thoroughness, and, in the critical and personal chapters, with intelligence and discrimination."—*Public Opinion.*

Little Book of Life After Death

Translated from the German of Gustav Theodor Fechner by Mary C. Wadsworth. With Introduction by Prof. William James. 16mo. Cloth, $1.00.

First published in 1836, this remarkable little book has passed through several German editions, the last having been published in 1900. Its author offers the theory that each individual leads *three* lives on earth. Professor James, of Harvard, has supplied an appropriate introduction.

STORIES OF DISCOVERY Told by Discoverers

STORIES OF ADVENTURE Told by Adventurers

New editions of Edward Everett Hale's Collections of Stories, appropriately illustrated. 12mo. Cloth, $1.25 each.

THE GOLDEN WINDOWS

A Book of Fables for Young and Old. By LAURA E. RICHARDS. *New Popular Edition.* With frontispiece and ornamental initials. 16mo. Cloth, $1.00.

EIGHT COUSINS or the Aunt Hill

ROSE IN BLOOM A Sequel to Eight Cousins

Two new holiday editions of Louisa M. Alcott's famous books. Each with 8 full page pictures. Crown 8vo. $2.00 each.

Send for Illustrated Holiday Catalogue **LITTLE, BROWN & CO., Publishers, BOSTON.** Above Books for Sale at all Booksellers.

The Nation.

NEW YORK, THURSDAY, DECEMBER 8, 1904.

The Week.

In estimating President Roosevelt's message, as in judging most of his writings, one feels the need of logical distinctions like those of the schoolmen. The difference, for example, between "property" and "accident" could never have been more useful than in separating the Rooseveltian chaff from the wheat. His purely *pro-forma* utterances; his care in saving the face of his party; his solemn platitudes; his earnest exhortations; his occasional easy descent from the sublime to the ridiculous—as in the lame conclusion of his argument that we must be prepared to whip all creation, and that, as a means to that end, "we should be able, in the event of some sudden emergency, to put into the field one first-class army corps"; his readiness to settle every problem, or at least to meddle with it—all this it is a convenience to set down as the *accidentia* of the message, and pass on to its essentials. First among the latter we would rank the spirit of the whole. It breathes of universal benevolence, and, with it, of an enormous extension of the powers of government. The President begins by speaking of "the enlargement of scope of the functions of the national Government required by our development as a nation." Taking this for granted, he mentions detail after detail which he would like to see brought under the control of Congress or of the Executive. Never before has a message invited Congress to solve the municipal problem in this country. One matter after another, now under local jurisdiction, Mr. Roosevelt is apparently impatient to see transferred to his broad shoulders. As Seward wrote to Lincoln, he shrinks from no burden.

Among his specific recommendations we note with pleasure that the President urges what is practically a Federal Corrupt Practices Act. Undeterred by the appearance of taking a leaf from Judge Parker's campaign speeches, he calls for stringent statutes against "bribery and corruption in Federal elections." Such laws, he says, should provide severe penalties for giving or receiving bribes, and also compel the publication of the expenditures not only of candidates, but of "political committees." The details President Roosevelt is willing to leave to "the wise discretion of Congress." The day before, Congressman Cockran introduced a bill aimed at the evil, and some Republican newspapers made fun of him for it; but it is now evident that the President is with him. Another Democratic position the President quietly annexes in saying of the Filipinos: "I most earnestly hope that in the end they will be able to stand, if not entirely alone, yet in some such relation to the United States as Cuba now stands." Of course, he proceeds to qualify and hedge this about characteristically. He has some really comic remarks about those "foolish persons here at home" who have urged Filipino independence. Under that amiable designation, he describes President Eliot, Cardinal Gibbons, Bishop Potter, and some hundreds of the most eminent Americans that could be named. Those "foolish persons" have simply advocated the promise of ultimate independence to the Filipinos, and argued that the Philippine problem is to be solved as was the Cuban problem. To this, President Roosevelt now assents in a message to Congress.

Tariff reduction, unlike charity, does not begin at home. It is easier to cut down the Panama customs a third by treaty than ours one per cent. by legislation. As for the agreement with the Republic of Panama, it provides a sensible if shuffling retreat from an anomalous embarrassment. Having created a republic *ad hoc*, we superimposed upon it with its two seaports a zone which we controlled absolutely. Besides the difficulty of a shared sovereignty, there was likely to be that of two tariff schedules. Evidently, the original Hay-Varilla treaty which contained this curious interweaving of powers was framed a little in gayety of heart. But matters have now been happily adjusted with some regard for the feelings of our opéra-bouffe wards. They are to reduce their duties one-third, and to admit free all materials used in the construction of the canal. In return for this concession, their grandam will give them the apple and the fig of collecting their own revenues themselves, and of issuing postage stamps (which, however, are to be supplied for canal-strip use at 40 per cent. of the face value) for the entire territory. The agreement leaves the semblance of sovereignty to our foundling, and, besides satisfying certain decent hypocrisies of the situation, does convey the indispensable benefit of a uniform tariff and internal free trade. Yet we must note again how ridiculously easy it seems to be to reduce the tariff of an independent Power; how impossible to lower our own by a hair.

Internal Revenue schedules, for some reason, have never been regarded as sacred, and the report that some of them may be revised this winter to meet the need for more revenue, disturbs nobody except the manufacturers directly concerned. Yet, for the matter of that, a particular industry can be fostered by the internal-revenue laws just as well as by the customs laws. The maker of wood alcohol is helped by the tax on grain alcohol, and the creamery by the tax on oleomargarine, just as much as the tin-plate manufacturer is by the tariff. Reports from Washington indicate that the tax on oleomargarine colored in imitation of butter is likely to be reduced from 10 cents to 3 or 4 cents per pound. This commodity illustrates very well the relation of high taxation to revenue. Under the old tax of 2 cents a pound on oleomargarine, added to the special taxes on its manufacturers, the Government received a revenue of $1,956,618.56 in 1899, $2,543,785.18 in 1900, and $2,944,492.46 in 1902. On July 1, 1902, however, through pressure of the dairy interests, the tax was raised to 10 cents on oleo colored in imitation of butter, and reduced on the uncolored article to ¼ of a cent per pound. The revenue for the ensuing year went down to $736,783.31, or about one-fourth what it had been the year before. Of this, $272,044.48 was paid on the colored, and $171,227.48 on the uncolored. The manufacturers meanwhile have turned their attention to making their product resemble butter without artificial tinting, and, in so far as they can do this, get the benefit of the lower tax.

Much of the comment on Saturday's official estimate of the cotton crop is wide of the mark. The Department of Agriculture, in fixing 12,162,000 bales as the probable yield, names a figure nearly a million bales above that of the largest crop ever previously picked. But it is not true that such a total would upset all recent expectations of the trade, and still less is it true, as the puzzled reader of many remarks on Saturday's cotton market might infer, that a twelve-million-bale crop is a "blow" to anybody. As a matter of fact, twelve million bales was the estimate of experienced students of the crop as much as two months ago, and a similar figure had been named, two days in advance of the Government estimate, by the leading Southern organ of the cotton planters. But more than this, it is a perfectly well-known fact that the hopeful sentiment which has grown so rapidly this autumn in the business community, was largely based on this belief in a "bumper" cotton crop.

President Woodrow Wilson, speaking before "The Virginians" last week,

pleaded for a conservative reorganization of the Democratic party to be led by the South. He showed the ruin that Populism had wrought in the party, and urged that the Southern leaders, representing the last remnant of Democratic territory, should strike hands with all Northern Democrats who hate Bryanism and desire a return to the historic principles of moderation in the use of the power and the money of the State. As a pious wish this is admirable. The practical weakness of the position is, however, that the South has already supported precisely such a conservative reorganization, which has failed ignominiously. Nobody worked more faithfully for Judge Parker's nomination than John Sharp Williams and his associates; none but the Southern States gave Judge Parker electoral votes. President Wilson wishes to try the experiment again. Would there really be any better hope of success? Frankly, we do not expect to see any genuine rehabilitation of the party come from the South. Not that able leaders might not be drawn from that section, but that the rank and file is moved by no political principle of any sort. Held to the partisan standard by a race prejudice, the Democratic vote is cast indifferently for Mr. Bryan's heresies or Judge Parker's orthodoxies. Such voters contribute nothing but ballots, and the Democratic party needs chiefly ideas. These considerations make it appear that President Wilson's Macedonian cry, which is interesting because it expresses the heart of thousands of conservative Democrats, is directed to the wrong quarter.

Congressman John Sharp Williams's speech at Spartanburg on Friday was the frankest admission yet made in public by a Southern leader that the negro question had much to do with the overwhelming defeat of the Democratic party on November 8. Summarizing the causes of that "stupendous result," Mr. Williams ranked second the widespread apprehension aroused in the Northern States by the lynching and disfranchisement of black men in the South. He said that he felt it his duty to say to a Southern audience that "things like the Statesboro affair must stop." For this stand Mr. Williams deserves all praise. When he declares that the whole fabric of civilization will be sapped unless we exalt that "law which Presidents and mobs should alike be made to respect and obey," he speaks like a civilized man and a patriot. Commendable, too, is his pledge to Mr. Roosevelt of the vote of a Democrat in the House for every Republican who abandons the President on the issue of tariff reform. This is simply to insist upon the measure rather than to stickle over the instrument, which is both common sense and statesmanship.

When Mr. Williams, however, turned to the political treatment of the negro, his clear-sightedness failed him. He has fearful visions of a South attacked and oppressed and degraded—but how? Why, merely by the demand that, in suffrage matters as in criminal matters, the law be enforced without discrimination on account of race or color! It is exactly the same principle which Mr. Williams himself upholds as against the lyncher. Make the law of the land respected and obeyed. Very well; no one asks more in connection with the black man's political rights. Mr. Williams complains that objection is made to a franchise based on education and property. But there is no Northern protest against that. Let the States, North or South, make the qualifications of a voter what they will, but see to it that they are applied impartially. This is the great difficulty with the Southern disfranchising statutes. They strike not at poverty and illiteracy as such, but purely at the poverty and illiteracy of negroes. The laws are artfully framed and craftily enforced so as to discriminate in favor of the ignorant and worthless white, too often at the expense of the educated and property-owning black. That is the standing injustice, and let Mr. Williams help the South honestly set about correcting it.

Mr. Joyner, the Superintendent of Education of North Carolina, has issued a table of the State's progress in school matters since 1900. This the Raleigh *Progressive Farmer* correctly characterizes as "a story of far greater import than any that has been graced with scare-head type on the first pages of our dailies." Four years ago the average school term lasted but 14.6 weeks; it is now 17. In 1900, 953 districts were without schoolhouses and 1,132 log-cabin houses were in use; to-day there are only 508 cabin schools, and but 527 districts without any houses. During this period the value of the public-school property has been increased by $700,000, about 75 per cent., and the enrolment of pupils has risen from 400,000 to 440,000. Just three times as much money was spent on schoolhouses in 1904 as in 1900, and the public-school fund is $1,765,362, as against $706,702. Of the larger sum, $330,000 was raised by local taxation in 229 districts, while only 30 districts contributed the $135,000 collected in 1900. In the latter year there was not a single school library; to-day Superintendent Joyner reports that there are 840, containing 75,000 volumes. There is, of course, still much to be done, for the average attendance is but 261,149 out of a school population of 673,774. Yet the improvement shows the substantial character of the educational revival which the Southern Education Board has done so much to stimulate.

"Receptive" is a new word which Gov. Odell adds to the bright lexicon of politics. The Governor-Chairman thinks that Frank S. Black is a "receptive candidate" for the United States Senatorship. To the lay reader the phrase might convey the idea that Mr. Black is entirely passive, perhaps actually reluctant to accept an office which the citizens of New York are dying to bestow upon him. Such, however, is far from being the case. In politics, "receptive" has a technical meaning. A candidate is receptive in the same sense that an ardent wooer is receptive; or, to use a more accurate comparison, the highwayman, who is willing to receive your watch and purse. The receptive candidate is "in the hands of his friends"; that is, he is moving heaven and earth and is imploring everybody he knows to turn in and work for him. He is "being talked of for the place"; that is, he is telling his heelers to shout for him and give the impression that he is the man for the job. He is "overwhelmed with requests to sacrifice his private interests and serve the public"; that is, he is pulling every wire to secure the election. Every trade has its special vocabulary.

If our State Supreme Court decision requiring five directors of the American Malting Company to refund more than a million dollars of dividends illegally declared is to become a precedent, a new use will have been found for dummy directors. The State statute forbids the granting of dividends except "from the surplus profits arising from the business," and holds liable, individually and severally, all directors who distribute moneys from any other source than net profits. It excepts, however, directors who register a protest against such an illegal division or are absent from the meeting. From now on it should be difficult to get a quorum at directors' meetings where the business in hand is voting away capital as dividends. In fact, the more questionable companies may be forced to maintain a dormant quorum of underclerks to vote unearned dividends, while the Messrs. Moneybags of the directorate remain in discreet and inexpensive aloofness. More seriously, this searching decision reinforces Judge Parker's view that we have only begun to realize the safeguards which the common law provides against rotten finance. Very much of the so-called Trust problem is merely a financial problem. The danger from the great corporations is less from their bigness than from their habit of operating under a blanket, thus fooling both the credulous investor and the naïve purchaser of their wares. It is unlikely that the Appellate Division will reverse the finding. Evidently a very potent weapon lies at hand for all who have suffered from rash and lawless handling of corporate funds. The directors of the American Malting Company

are by no means the only ones who have mixed up principal and profits.

How shall the epidemic of desertions from the army be checked? This question is again troubling the War Department. Twenty years ago the evil was said to be due to the cessation of Indian warfare, and the dulness of the piping times of peace. Later it was thought to be due to carelessness in recruiting. All sorts of causes have since been pronounced responsible, including, of course, the stopping of the sale of beer in post canteens. Gen. Chaffee, in his annual report, is shocked at the fact that one in every ten men ran away during the last fiscal year, and he finds our military prisons full to overflowing. As Secretary Taft repeats the familiar assertion that our army is the "best fed, best paid, best clothed, and best sheltered in the world," the Chief of Staff does not devote much time to seeking causes within the service, but urges as a panacea the disfranchisement of the deserter in town, State, and national elections. Now, disfranchisement as a penalty for crime never, we believe, deterred one criminal in a hundred. Moreover, in this vast country the possibility of running down voters in all our States who may be living under assumed names thousands of miles from where they deserted, is a practical impossibility. As a matter of fact, comparatively few deserters are caught and punished. What the situation calls for is a great improvement in our corps of officers, now largely filled up with technically untrained men and political favorites, and the punishment of company and regimental commanders whose men desert in droves. Frequent desertions generally mean the incompetence or harshness of the responsible officers.

Eleven years and one month ago the last world's fair in this country closed its doors at Chicago. Seventeen years' separated that show from its predecessor, the Centennial Exposition at Philadelphia. It was obviously impossible for any exhibition this year to make an advance upon the Columbian Exposition comparable to the latter's improvement over former world's fairs. No innovation which science has produced since 1893 could make such an impression as did the lavish electric illumination seen for the first time at Chicago. Thus the Exposition commemorative of the Louisiana Purchase excelled rather in bigness and in novelty of particular exhibits than in originality of scope and plan. It has been charged that the publicity department did not intelligently perform the task of interesting Eastern people in the enterprise; but it is certain that, in view of the smaller expositions at Buffalo, Omaha, and Charleston since 1893, a great many people decided offhand that they had had enough of fairs. At all events, the incomplete figures given out on the closing day show a striking difference in the popular interest. At Chicago the total admissions numbered 23,529,212 during six months, while at St. Louis in seven months there were only 18,317,457. The receipts from admissions and concessions this year are estimated at $10,000,000, while in 1893, according to the auditor's report, these two sources brought in $14,325,911.

If the Comic spirit ever condescends to mere politics, she will not fail to enjoy the precious spectacle of M. Jaurès, the great Socialist orator of France, at pistol point with the nationalist poet Déroulède for the sake of the memory of Joan of Arc. In fact, it is a most impish destiny that has given M. Jaurès as a champion and Mark Twain as a biographer to the visionary of Domremy. As for the former, he is by all Socialistic principles bound to detest the aristocratic code of the duello. Yet it is not the first time that the eloquent Jaurès has preferred the truth of action to that of consistency. Only the other day he defended the system by which promotion is refused to army officers whose wives and daughters are Roman Catholics. But not so long ago Mlle. Jaurès received her first communion, yet her father remains leader of the *bloc*. The duel between Jaurès and Déroulède thus resembles a little the unseemly contest at Ophelia's grave. It is a case of proving not who is disloyal, but who is most truly loyal. Disinterested observers hoped to hear of the usual innocuous "exchange of two balls at twenty-five paces," and they were not disappointed. The combatants were uninjured. Without either of the rival champions French politics would be distinctly duller.

Count Tolstoy has never been more uncompromisingly the quietist than in his letter on the zemstvo congress. He deprecates the agitation because no reform is possible except that of the individual. "It puts before the nation and before individuals the pernicious belief that social improvements can be wrought by mere change of forms." France, England, and America, he maintains, prove that "Constitutional government is no cure for the evils that afflict mankind." Accordingly, his advice to the peasants whom he loves would be to rest content without education, without a free press, without open and even justice, and set themselves steadfastly to their own personal regeneration. Now, it is certain that the text "The kingdom of Heaven is within you" cannot be preached too often, but it is amazing that Tolstoy should not perceive that the zemstvo gathering is itself an extraordinary expression of individual initiative. Finding its beginning in the generous purpose of Prince Mirsky, it became possible only through the ardent and undaunted desire for reform of a handful of local leaders. If ever a movement was personal, this is. And these champions fight against unrighteousness in institutions precisely in the spirit that the Gospel fights it in the individual sinner. It is a curious perversion of vision which makes the drunkard next door loom larger than the tyranny that oppresses alike the drunk and the sober.

The capture of 203-Metre Hill apparently presages the speedy fall of Port Arthur. It is high time, not merely because of the ominous deadlock of the armies below Mukden and the threatening approach of Rozhestvensky's fleet, but because of the rapidly waning Japanese prestige. The Mikado's Government has shown its own nervousness over the delay in taking the fortress by freely giving out the news of each success achieved by Nogi's forces, in remarkable contrast to its absolute silence during the first three months of the investment. The possession of Port Arthur, practically the one ice-free harbor within the sphere of operations, will not only release Togo's fleet, now doing ineffective blockade duty, but will make the supplying of Oyama's forces much easier than would otherwise be possible, by way of Dalny and Niu-Chwang. Next to the freeing of Nogi's troops for cooperation with Oyama, this is the most important effect the fall will have upon the situation below Mukden. It is now more than questionable whether there is still time and opportunity to renew the Russian repulse. Kuropatkin has met with no decisive defeat, and still holds Mukden, while acquiring daily better trained troops than those with which he fought the earlier battles. We may well ask whether the choice of Port Arthur instead of Mukden as the chief objective of the campaign has not been an almost fatal error of the Japanese strategists. Certainly, in the light of actual events, the true policy of the Japanese General Staff would seem to have been the "containing" of Gen. Stoessel's forces with the smallest possible army, and the bending of every energy towards the smashing of Kuropatkin before reinforcements could reach him. For some mysterious reason, the Japanese initiative came to an end on September 4th with the battle of Liaoyang. Since that time—that is, for three precious months—Oyama has been as if paralyzed and has accomplished almost nothing. If the secret of this inaction proves to have been the draining of the northern forces to effect the fall of Port Arthur, there should be no limit to Russian eulogies of Gen. Stoessel and his soldiers for the stubbornness of their defence.

"TAXING PATRIOTISM" AND OTHER THINGS.

Senator Fairbanks has never been thought of as a speaker whose words are half-battles in their downright conviction and plain-spoken fearlessness. No one would think of applying to him what was said of the blunt Duke of Devonshire: "What a comfort it is to find a man who means what he says, and means you to understand what he says." Yet even the Indiana Senator, whose valorous timidity and determined ambiguity have become proverbial in Washington, takes his stand with the President in declaring that the Republican party must put its hand to the work of revising the tariff. In the very holy of holies of protection, the Home Market Club of Boston, the impious man reached forth his hand last week to touch the ark of Dingleyism—and was not struck dead.

One of Mr. Fairbanks's phrases was that the task before the party victorious in the last election "will tax our patriotism." Doubtless, but something else will also have to be taxed. The Treasury cannot be filled by a levy on patriotism. It seems a pity that so abundant an article cannot be taxed. If every campaign orator or candidate for office were required to commute his overflowing patriotism into a cash contribution in support of the Government, either the public revenue would be much greater or the visible supply of patriotism much smaller. Before the tithingman, we fear, patriotism would be as fugitive as capital is said to be. But, that taxable failing, it is evident that others have got to be found.

It is, indeed, growingly apparent that the financial needs of the Government will force an early change in our tax laws, if nothing else does. The gravity of the outlook deepens month by month. November recorded another deficit in the Treasury operations—this time of more than $4,000,000. The receipts showed a gain of about $1,000,000, but the expenses were larger by $2,250,000 than in November, 1903. For the fiscal year to date the deficit is $25,920,000. Secretary Shaw, it will be remembered, estimated the deficit for the entire year at $23,000,000. It is nearly $3,000,000 more in only five months. The Secretary, moreover, made his estimate of a year ago "upon the basis of existing laws." But the laws were not left as then existing. No acts were passed to increase the revenue, but many to deplete it. The consequence is a deficit running beyond Secretary Shaw's prediction, and promising to double it by the end of the fiscal year.

Nor is this the whole of the story. Expenditures are certain to mount if plans already made are not to be relinquished. Rural free delivery has now an acquired momentum which is destined to carry it speedily over the entire country. But it is a costly service, and means postal deficits doubled or quadrupled soon. It is mighty convenient for Uncle Jed, seven miles from Neck of the Woods, to have his mail left at the door by carrier, but it takes a lot of money to make the old gentleman so comfortable. Somebody has to furnish it, which simply means that somebody has to be taxed. Similarly of the millions required for the Panama Canal and for the ever swelling military outlay. Ways and means of raising the necessary funds must quickly be devised. The old happy-go-lucky days of self-balancing budgets are past. Government expenses are palpably outrunning income, and the ugly alternative of new taxes or bankruptcy will soon be confronting the Treasury.

Few Republican leaders have shown due appreciation of this aspect of tariff revision. The President has not, publicly. Perhaps this is because customs duties have not been thought of as taxes. The pleasant conception has been that they are a kind of American magic, filling the country with prosperity and the Treasury with surplus revenues. But the days of that ignorance are rapidly passing. The tariff now stands out as requiring overhauling, not only because it is a social and commercial grievance, but because it is an exceedingly vicious tax law. As such, it meets none of the main requirements. It is neither simple, equitable, nor so productive as it might easily be made. The mouth of a European Finance Minister would fairly water at the thought of the great revenues he could raise out of the American people if given a free hand to tax them with an eye solely to the Treasury return. And it is certain that the time is near when the wit of our statesmen will be exercised to put more money in the public purse upon which such cumulative demands are made.

"To tax and to please," we have it on high authority, is no more given to mortals than to love and be wise. Yet the Republican party has got to do the taxing, whether the pleasing follows or not. The system of indirect taxation is breaking down. The revenue derived from the skilfully concealed taxes which are called protective duties is no longer to be adequate, and we shall have perforce to advance beyond that stage when, as Senator Mason of Virginia wrote to Cobden: "Our people are not yet philosophical enough to know that it is safer to feel the tax when you pay it, than to pay it without feeling it."

SMALLER VOTE, LARGER MAJORITY.

As the official returns from one State after another have come to hand, certain facts about the election scarcely indicated in the first announcement of results begin to stand out strikingly. It was the current impression on the day after the election, for instance, that record-breaking majorities must be the accompaniment of a record-breaking vote. On the contrary, it now appears almost certain that the popular vote is several hundred thousand smaller than it was in 1900, which was itself about the same as in 1896. It has also been assumed that the election went overwhelmingly one way because of the great multitude of Democrats and first voters who, by reason of personal admiration for Mr. Roosevelt, came over and voted the Republican ticket. This view, too, is put in a new light by the later returns, which show that Roosevelt's lead over Parker was composed of more than three parts Democratic losses to one part Republican gains.

The latest figures now obtainable, partly unofficial and in a few cases estimated, show that Roosevelt received 7,634,793 votes and Parker 5,061,041. In 1900 McKinley had 7,217,810, and Bryan 6,357,826. Thus Roosevelt's gain over McKinley's vote was only 416,983, while Parker's loss from the Bryan vote was approximately three times that figure, or 1,296,785. For every new recruit in the Republican army, there were three deserters from the enemy's camp.

Now, as to the total vote. The combined vote for Roosevelt and Parker was 12,695,834, which was 879,802 less than the combined vote of McKinley and Bryan. Add 600,000 for the Socialist vote, and the total is still about 675,000 short of the total vote of all parties in 1900 which was 13,961,566. There is no reason for believing that the Populist, Prohibitionist, and Socialist-Labor candidates had anything like that difference. Thus, unless some of the State votes yet to be canvassed have been preposterously under or over-estimated, it is hard to escape the surprising conclusion that, in the year of this unexampled party triumph, the number of persons voting was actually less than it was eight years ago.

Looking only at the change of votes since 1900, the States may be divided into four groups. In only three States—Georgia, Mississippi, and South Carolina—was Parker's vote larger than Bryan's, and Roosevelt's smaller than McKinley's. In eight others—Alabama, Kentucky, Maine, Maryland, North Carolina, Tennessee, Texas, and Virginia—both Parker and Roosevelt received fewer votes than Bryan and McKinley, respectively. In four — Delaware, Massachusetts, Rhode Island, and West Virginia—Parker's vote was larger than Bryan's, and Roosevelt's larger than McKinley's. In the other thirty, Roosevelt had more votes than McKinley, and Parker less votes than Bryan. But we find, further, that in only ten of these—Connecticut, Idaho, Nevada, New Jersey, New York, Pennsylvania, Utah, Vermont, Washington, and Wyoming—did Roosevelt's gain over the McKinley vote exceed Parker's loss from the Bryan vote.

The following table, in which the ma-

jority of the items are still subject to correction, shows how the party votes fluctuated in these groups:

	Roosevelt loss.	Parker gain.
Georgia	11,082	1,772
Mississippi	1,253	3,294
South Carolina	1,308	5,630
Total	13,593	10,696

	Roosevelt loss.	Parker loss.
Alabama	26,160	16,511
Kentucky	26,801	24,899
Maine	51	9,275
Maryland	29,815	12,825
North Carolina	48,081	32,753
Tennessee	1,194	4,751
Texas	5,641	127,423
Virginia	69,415	65,342
Total	205,164	293,788

	Roosevelt gain.	Parker gain.
Delaware	176	762
Massachusetts	15,686	11,279
Rhode Island	7,114	5,112
West Virginia	12,425	1,560
Total	35,401	18,713

	Roosevelt gain.	Parker loss.
Connecticut	8,532	1,088
Idaho	20,186	10,994
Nevada	2,240	2,176
New Jersey	23,431	258
New York	18,008	14,386
Pennsylvania	128,284	86,244
Utah	15,305	12,593
Vermont	4,891	3,072
Washington	37,544	14,833
Wyoming	5,789	1,287
Total	244,200	146,331

	Roosevelt gain.	Parker loss.
Arkansas	1,940	16,411
California	34,813	39,300
Colorado	12,606	46,551
Florida	895	1,214
Illinois	34,760	185,055
Indiana	32,226	35,239
Iowa	7,192	44,265
Kansas	24,918	77,801
Louisiana	767	3,671
Michigan	45,731	58,685
Minnesota	24,387	56,245
Missouri	7,356	66,075
Montana	8,645	16,365
Nebraska	16,723	62,237
New Hampshire	821	2,328
North Dakota	2,109	3,519
Ohio	76,079	117,228
Oregon	3,929	15,864
South Dakota	7,964	11,844
Wisconsin	14,288	25,178
Total	356,149	886,175

Those now pathetic maps of "sure" and "doubtful" States circulated before election may be examined in connection with this table. There is a possible grain of cold comfort in the showing made by Parker in those States which were made the battleground. There were fourteen States in which there was supposed to be some element of doubt—Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland, West Virginia, Indiana, Illinois, Wisconsin, Colorado, Utah, Nevada, and Montana. Every one of them went Republican, except Maryland, yet it would appear that the Democratic candidate was a trifle more successful in keeping up the party strength to the standard of 1900 than he was in the country at large. To use the comparison suggested above, the Republican plurality for the whole country was made up of 28 per cent. Republican gains and 72 per cent. Democratic losses. In the fourteen selected States the plurality was obtained by 31 per cent. Republican gains, 69 per cent. Democratic losses. The group of States to which Parker's candidacy was expected to make the strongest appeal, New Jersey, New York, and Connecticut, appear in the list of States in which Roosevelt's gains over McKinley were greater numerically than Parker's losses from the Bryan vote. In only three of the States of the solid South did the bitter animosities against President Roosevelt result in cutting down his vote while increasing that of Parker.

LITTLE WAYS OF SENATORS.

United States Senators are, like Milton, stars that dwell apart, yet, also like Milton, they lay "the lowliest duties" on their hearts. Nothing, in fact, is too lowly for them, if it relate to patronage. Treaties and tariffs they may pass by in lordly scorn; but if it is a question of appointing a fourteenth assistant anywhere, they instantly become like so many Maher-shalal-hash-bazes, or hasteners to the spoil. Their position is that, whether in reality they have anything to do with naming a given man for a given office or not, they must appear to have everything to do with it. The whole system of Senatorial privilege would come tumbling about their ears if the idea once got abroad that a bad appointment could be made by the President except upon their initiative and responsibility. With a frankness as appalling as that of the prophet Amos, they ask, "Shall there be evil in a city, and the Lord hath not done it?"—for "Lord," of course, they naturally, as expert textual critics, read "a Senator."

Mr. Alger of Michigan is the latest to exemplify the method of keeping a Senator's true grandeur unimpaired. Word was brought to him that the President was about to appoint an assistant secretary to be credited to Michigan. For one anguished moment Alger hesitated; then, remembering what was due to his office, he moved promptly upon the White House. He had no objection to the Michigan appointee. He did not know the man, and had never heard of him. That had nothing to do with the case; but it was a matter of life and death that it should be announced that the appointment had been made on Senator Alger's recommendation. The end of the republic would be in sight if a Senator were not to be permitted to telegraph to a citizen of his State, upon whom he had never set eyes and about whom personally he did not care the tenth part of a straw, "The President has been pleased to accede to my request that you be appointed seventeenth deputy collector."

Our own Senator Platt has frequently shown a singular agility of mind in explaining that the President had done just what he desired. This has sometimes been a difficult feat. After you have publicly declared that you will have A for a certain office, or know the reason why, it is not easy to maintain suitable gravity when you announce that the President has named B at your special request. But Platt has been often equal to this. Long practice, or a decayed sense of humor, enables him now to say with perfect *aplomb* that he is "much gratified" at the way in which the President has acted upon his suggestions. The thing becomes amusingly or pathetically transparent in a man like Platt, whom age is depriving of caution as well as personal dignity. He babbles freely of what he is going to make the President do, but is smilingly "gratified" when the opposite is done. "Do not beat me, I beg; but if you will, why, I am thine ass."

It would be a mistake, however, to look at this relation of Senators to the appointing power wholly in its mirthful aspect. It is much more than a laughing matter. The very fussiness and self-betrayals of Senators point to the serious evil behind all. The Senate is evermore grasping for power. By closer and closer parallels and remorseless sapping like those of the Japanese at Port Arthur, Senators have been for years encroaching upon the Presidential prerogative. It is a process which is never stayed. Occasional defeats only make the usurping Senators more determined next time. They are bent on transmuting the power to confirm into the power to appoint. Some Presidents yield more than others, but all yield something; and that something is at once made the basis for renewed and more arrogant demands. No circumstances, no public exigency, can make a Senator feel that he has not been robbed of his prey if an office is refused him. The appetite for patronage is insatiable. Mr. Rhodes's last volume brings out the fact that Jefferson Davis was often harried by Confederate Senators on the hunt for spoils. At the very moment when the South was in the death-grapple of the war, a bitter row over the postmastership at Montgomery, Alabama, brought a caustic refusal from Davis to be dictated to by Senators.

President Roosevelt wrote to Congressman Gardiner roundly denying the latter's cool assertion that Senators make appointments to office. "Not while I am President," said Mr. Roosevelt. Still, he admitted that he "consults" Senators about patronage, and tries to meet their views. But he would be the last man to say there was not peril in the method, and that he had not often been imposed upon. He duly "consulted" the Illinois Senators before appointing the notorious "Doc" Jameson naval officer in Chicago —an act which filled his friends out there with amazement. Obviously, it is purely a rule of thumb which the President has adopted. He simply endeavors to "get on" with the Senate. To some Senators he gives practically a free hand; upon others he keeps a jealous watch. The whole relation is unstable and unsatisfactory, and it is to be hoped that Mr. Roosevelt will try to work out a more definite and safer system. Let him not be afraid of thwarting Senators,

That is better than allowing them to thwart him. And so closely, under the system, is legislation tied up to patronage, public policy to Senatorial privilege, that the President's desire to put through Congress measures for the public benefit will be in great danger of frustration unless he shows that he means to preserve his Constitutional right both to appoint to office and to recommend laws, in full vigor.

OUR NAVAL POLICY.

Secretary Morton's first annual report bears all the earmarks of one young in office. There is a touch of the comic in his moving references to the infallibility of judgment displayed by Mr. Theodore Roosevelt, as Assistant Secretary of the Navy, seven or eight years ago. But there can be no doubt that Secretary Morton's jingo call for a very great navy meets with Mr. Roosevelt's approval. There is the same familiar assurance which we have so often had from Mr. Roosevelt's lips, that the best preparation for peace is the expenditure of millions on battleships, and the same urgent warnings that we must have more vessels and many more officers and men to man them. With youthful pride Mr. Morton asserts that "never before were so many warships launched by this or any other nation in one year," and he rather glories in the fact that the naval estimates for next year—114 millions—are "the largest ever submitted." He heartily endorses the Imperialistic policy of the General Board of the navy, which would give us an enormous fleet, surpassed only by England's. He does not repeat his Chicago spread-eaglism that we want the "greatest navy on earth," but he comes uncomfortably close to it in his statement that "we want such a navy in size, style, and 'sand' that no other navy will ever desire an engagement with us."

It would be easy enough to show the impossibility of our ever achieving this ideal, so long as the men of Great Britain stand by their present naval policy. It would not be difficult to point out, too, that no foreign navy has attacked us or tried to attack us for nearly a century, and that no periods in our national history were more full of peace with honor than those years during which our navy was at its smallest. But the urgent issue of the moment is the necessity of formulating a national policy which shall not be determined by a few naval officers bent on the aggrandizement and glorification of their own department of the Government and themselves.

The navy has now grown to such proportions that conservative navy officers have themselves protested — but, of course, privately as a rule—against further increase. What is the end to be achieved? The historic policy of the country has been one of defence, pure and simple. It was on this ground that the recommendations of the Endicott fortifications board were accepted in 1886, under which there have already been expended 110 millions on our harbor fortifications, and for which 65 millions more are needed. In his annual report just issued the Chief of Artillery, Gen. J. P. Story, seems certain that our harbors can be fortified against any naval attack by torpedoes at a cost of only $3,819,420, less than that of a single battleship. With our present land batteries and fleet, which already ranks third among those of the nations, it is impossible to believe that any foreign Power could obtain a lodgment on our shores. No sound military mind will deny this or refuse to admit that in the Atlantic Ocean alone we have an ally worth dozens of battleships.

Why, then, should we pile Pelion on Ossa by adding battleship after battleship? The General Board, or any other board, will never have enough. When our fleet has surpassed that of France, the cry will be to outstrip England; should it be possible to leave England behind, we should soon be told wnat the English taxpayers have heard for decades, that their fleet must surpass any *two foreign* navies in "size, style, and sand." Moreover, our own activity in creating warships is already stimulating other nations to increase their output. But, waiving this, one fact remains undisputed: our navy is no longer one merely for defence; it is an *offensive* fleet—unlike Germany's or Italy's—meant to carry war into the furthermost quarters of the globe, and as such it is a radical departure from the historic policy of defence, which cannot be checked too soon.

Every war of recent times, including that between Russia and Japan, has shown the superiority of coast defences over attacks from the sea. Admiral Togo's fleet is powerless before Port Arthur, even now when the war vessels in the harbor may practically be counted out. At Matanzas, San Juan, and Santiago our fleet merely scratched the enemy's defences. Simple floating mines as used off the Mantchurian coast had done more damage to the fleets of both Japan and Russia than torpedo boats and ships' batteries, up to the time of the sortie of the Port Arthur fleet. Not a single Japanese ship has succumbed to anything but a floating mine. The defence of Port Arthur on the land side points afresh the truth that under modern conditions the defenders are rapidly gaining in power over the besiegers. Why, then, should the United States, safeguarded by the oceans, launch vessel after vessel, always with the hypocritical assurance that each is dedicated to peace? With such an inflammable people as our own has been demonstrated to be by the Venezuelan and Cuban episodes, the possession of so formidable a weapon of offence as our fleet already is constitutes a menace to the world's peace. It should be noted that the Russian newspapers are already remarking how ill our naval programme goes with the President's summoning of another Hague Conference.

ATTRACTIONS OF THE MINISTRY.

"How can men be induced to enter the ministry?" This, according to the morning papers, was the subject discussed at a recent meeting of prominent Protestant clergymen. Statements in regard to the dwindling numbers of aspirants for the ministry have often been published. A New Haven correspondent, for example, wrote a day or two ago that, among the 483 Yale graduates from 1701 to 1744, there were 226 clergymen; fourteen classes of the first half of the nineteenth century show about 31 per cent. in the ministry; but among the present living graduates only 7 per cent. are clergymen. Still more striking are the facts in regard to abandoning the profession. Out of 849 graduates of the Yale Theological School, 208, or nearly one-fourth, have left the ministry. On this point of wholesale desertions, Everett T. Tomlinson contributes an interesting bit of testimony in the December issue of the *World's Work*. He wrote to twenty "successful ministers" asking whether, if they had their lives to live over again, they would make the same choice. Seven gave an enthusiastic affirmative, three were undecided, nine replied "No" positively, and one declared he would be glad to take up the work if he could avoid being "ordained." If these twenty men be fairly representative, the quarter who withdraw are matched by another quarter who stay reluctantly. The problem, then, is not only how to get men to preach, but how to keep them preaching.

The causes that deter men from becoming clergymen are to-day pretty obvious. The old prejudice that "learning hath always been an enemy to the gospel" is still alive. Indeed, the struggle between rigid ecclesiastics on one hand and scientists and scholars on the other, first over evolution, and then over the higher criticism, has dealt a severer blow to the Church than the gentlemen who now so gracefully acquiesce in the new doctrines imagine. The average man of forty can remember when Darwin and Huxley, as well as the "whole tribe of German blasphemers," were denounced from one end of the land to the other as foes of religion. In 1876, when Huxley visited this country and lectured on the evolution of the horse, the pulpit triumphantly answered that Robert Bonner had never observed in the horse's hoof the rudiments of digits. In those days learned bishops

rested their case on the facetious remark that, though Darwin might be descended from a monkey, they were not. It is all very well for them to say now that the theory of evolution is a singu'arly beautiful as well as orthodox explanation of the ways of God to man. The old contest is not forgotten, especially while the reactionary religious press keeps up its din about the higher criticism. Young men, viewing the past and the present, scrutinize the ordination vows, and frankly say they will not put their necks into the noose.

They are especially reluctant when they see the humiliations to which many clergymen are subjected. "I pity a priest-ridden people," said Rowland Hill, "but a people-ridden priest is a still greater object of compassion." Of course, things are not so bad as when Wesley complained that one man would not listen to him for fear of hearing something against cock-fighting; but the reluctance of our preachers to touch their most influential parishioners on the raw is proverbial. The Baptist pulpit and press, for instance, are generally willing to leave the shortcomings of John D. Rockefeller and the Standard Oil Company to the ruthless hand of Miss Tarbell in *McClure's*. The Methodists spoke softly to the late Daniel Drew while he was engaged in the beneficent project of founding a theological seminary at Madison, New Jersey. When an enterprise is frankly commercial, the promoter of it is scarcely blamed if he watches narrowly to see on which side his bread is buttered; but trimming and cringing are not edifying in avowed teachers of morality, and must be nauseating to the man who is forced to such compromises with his soul. In short, high-spirited and independent men keep out of the ministry for the same reason that tney keep out of certain kinds of journalism. There are few pulpits, just as there are few newspapers, in which they will not be the slave to some party or creed; in which they will not have to commit their consciences to the keeping of powerful patrons—large contributors to so-called religious work, heavy advertisers.

A speaker in the meeting of clergymen just recorded urged that "appeals for the ministry should emphasize the heroic." This is all very well; but where is the Carnegie to provide a "hero fund"? The man of exceptional courage and power, your Luther or your Wesley, can defy the conventions of a smug morality, can proclaim his independence and compel support. But epoch-making reformers are not bred by the hundred thousand to fill our small country pulpits. The recruits must come from men of average mind and conscience. If they pray for rain, they alienate the half of the parish that is haying; if they pray for dry weather, they offend the half that is growing crops. Whatever they pray for, they look forward to the "dead line" at fifty years. If they try to thrust down the throats of their cynical and case-hardened old trustees the rudiments of decency, they are laughed at as fanatics, and their families—always large—freeze and starve.

No marvel, then, that, in spite of the attractions of the high calling, so many pastors fear their strength is spent in vain; and that the heads of theological schools complain that the young men committed to their charge are—though not in the Biblical sense—poor in spirit. Yet in this matter, as in all others, the churches probably get what they deserve.

MRS. GILBERT AND HER CONTEMPORARIES.

There is an old saying that the true value of a thing is not known until it is lost, and it often holds good when applied to persons. Thousands of men and women all over the United States have experienced a feeling of personal loss in hearing of the death of Mrs. G. H. Gilbert, but few of them, perhaps, will realize the full significance to the stage of her sudden and unexpected, though not premature, taking off. Actually, it marks the end of an epoch. She was the last surviving representative of a type that is now extinct, the real actress thoroughly trained in every branch of her art or profession, ready at a moment's notice to take her part in tragedy, all sorts of comedy or farce, as occasion might require, and play it competently, if not brilliantly, in the proper style and spirit, without undue assertion of her own private individuality.

To-day there is not a single actress belonging to the English-speaking stage on this side of the Atlantic of whom this could be said truthfully; and if there are any on the other, they can be counted on the fingers of one hand. The same remark would apply equally to actors. The only player on the English-speaking stage who can rightfully be called a great actor is Sir Henry Irving. He, in spite of all his exasperating mannerisms, exhibits a wide versatility, as well as a complete mastery of the esssential theatrical accomplishments. Of performers, male and female, who are eminently proficient in certain lines of drama, there is a considerable number, but the vast majority of them can shine only in characters to which their own habitual speech and manner happen to be appropriate. It need not be denied that some of them are endowed with the acting instinct—most of us have that—in an uncommon degree, but this gift is practically ineffectual because it has never been developed by proper discipline. With the requisite training they might have been Keans or Booths by this time, but, being ignorant of the fundamental principles of their art, of the manifold secrets of elocution, carriage, gesture, pose, and behavior, they are debarred from entering the higher regions of the literary and imaginative drama, where their defects would inevitably make them ridiculous. This is one reason of the prevalence of the realistic drama, which is mimetic rather than imaginative, and therefore is less likely to exact the highest acting qualifications on the part of its interpreters. Actors naturally prefer plays in which their limitations are least exposed, and demand creates supply. The luckless public has no voice in the matter; it must take what it can get.

Now, Mrs. Gilbert never was, and never pretended to be, a great actress. It does not appear, indeed, that in her earlier days she revealed any special inclination toward or aptitude for a stage career. She began life as a dancer, and, after abandoning the footlights—for ever, as she hoped—she was driven back to them by force of circumstances. Her first essays in acting were the result of domestic necessity, and occurred when she was approaching her thirtieth year. She had neither rare beauty nor genius, but she had courage and perseverance, and the best of all possible schools—the old stock companies, with the example of great actors for her instruction and encouragement. In this consists the main significance of her remarkable career. She enjoyed the inestimable privilege of constant association with past masters in all departments of histrionism, and of learning from hearing and observation the mysteries of speech and action. Her progress was slow but steady, and long before she had reached middle age she was acknowledged to be one of the best "old women" of her time, in both old and new comedy, and was judged worthy to play Lady Macbeth in company with such tragedians as the Booths and Forrest.

It is not, however, the object of this article to enumerate her acting triumphs, but to direct attention to the training which enabled her to achieve them. Doubtless, her experience as a dancer—as in another notable instance, that of Ellen Terry—contributed largely to the grace of movement for which she always was conspicuous; but it was in the stock companies, in which she often played three different characters in one night, that this English country girl acquired the polished and elaborate manner associated with the old high comedy, the dignified repose and larger gesture befitting tragedy, the natural ease of modern comedy, the legitimate exaggerations of melodrama, and, above all, the faculty of clear, melodious, unaffected, nicely modulated, and correctly emphasized utterance. Even in extreme old age her cultivated speech was a delight to the appreciative listener, and a ceaseless reproach to the slovenly

chatter of most of her younger companions.

She belonged to two dramatic eras, and the ease with which she adapted herself to the requirements of the frivolous modern drama afforded incontrovertible testimony to the value of the arduous schooling which she received in the period and under the system which produced Macready, Edmund Kean, the Booths, Phelps, Davenport, the Wallacks, and many others scarcely less illustrious. Where are their compeers to-day? She was but an humble member of that brilliant confraternity, but she could measure herself with the leaders of it without incurring humiliation; and when that mighty generation passed away and the education of actors was ended by the speculative monopoly which destroyed competition and obliterated the stock companies, she survived to demonstrate by actual comparison the superiority of trained skill over the raw material.

Does anybody suppose that her immense popularity during her long career at Daly's was due wholly, or even chiefly, to popular affection for her personally? The good public is not so sentimental. Her age won her some sympathy, but it was the certainty that she would afford excellent entertainment that made her a universal favorite. She played many parts, some better than others, but failed in none. At the last, when eighty-three years old, she became a "star" for the purpose of saying farewell, and amazed even her oldest admirers by the vigor and beauty of her acting. It is a record without a parallel, and her death at the very climax of a long and honorable career can scarcely be called unhappy. The old order changeth, giving place to new, but the new is not necessarily the better. Mrs. Gilbert belonged to both, and in her life there is a pregnant lesson for her younger contemporaries if they choose to profit by it.

THE IRRIGATION CONGRESS AND ITS PROBLEMS.

EL PASO, TEXAS, November 19, 1904.

The twelfth Irrigation Congress has closed here. The attendance was small, compared with the preparations, and many of the members who did participate were late in arriving. Most of the railroads giving access to El Paso had been washed out. Some had suffered to the extent of millions of dollars, and from their roadbeds hundreds of thousands of tons of material had been washed away. But, among the many subjects discussed, none bore upon one of the most vital questions affecting Western irrigation—the liability of the storage reservoirs, now being built across the beds of mountain streams, to be filled, in abnormally rainy seasons, such as the past, with rocks and sand instead of water. The members in attendance had had visible demonstration of the terrific effects of violent storms in the arid regions, and could therefore have formed some opinion, not only of the consequent difficulty, of building dams strong enough to resist the floods, but of the probability that the dams, if they stood the strain, must inevitably be filled with that heavy débris which is carried down with each successive torrent in incalculable quantities. No paper was read on this momentous subject, and words of caution, if uttered, were spoken in a whisper.

As was shown by Pinchot and others in the forestry division, the destruction of the forests was one cause of these fearfully disastrous floods; but the wisdom of building dams as storage reservoirs where, besides catching water, they must unavoidably catch rocks, was not criticised. It is, of course, inevitable that, in a congress collected admittedly to promote a cause—especially so glorious a cause from every point of view as the reclamation of land from the desert—words of dissent, and even of warning, would sound like a discordant note; but it is to be regretted that this phase of the subject does not receive more attention. In the estimation of many men who know from long experience the vagaries and the incalculable force of a Western stream when converted into a raging torrent, some of the plans now being carried out at large expense will result in disappointment and even failure.

The hydrographic branch of the United States Geological Survey has measured and tried to estimate the force of the flow at different seasons in the rivers which, when in flood, are to provide water wherewith to irrigate during the dry season the land tributary to them. But observations and calculations made for nine successive years will be lamentably contradicted by an extraordinary flood in perhaps the tenth year, when, for an hour or less, what is not inaptly called a cloudburst falls upon even a small section of the drainage area of a river. When this happens, the very earth seems to melt, and as great a volume of sand and rock as of water appears to be carried into the channel from every hillside by the impetuosity of the storm. The bed of the stream, dry an hour before, is filled with a furious river, carrying down rocks of such size that the noise caused by their impact, as they are hurled against one another, can be heard above the roaring of the waters. Such storms and such effects occur only at long intervals, but they occur sooner or later in every section of our arid region, and one such flood will fill the largest storage reservoir built across the channel of the stream itself.

The same effect is produced by such heavy rain, falling for some hours over a large area, as did such damage on the Santa Fé Railroad in the beginning of last October. Seven inches of rain fell in one night. The flood rushed down the narrow bed of the creek which flows through Trinidad, Col., carrying away the railroad station, with three lines of track, and leaving in its wake the wreckage of seven steel bridges, while in New Mexico, south of the same Raton Range, mile after mile of track and embankment was swept away—whither? To the Mississippi and the Rio Grande, simply because there was no storage reservoir to stop them before they reached their destination.

President Roosevelt has done no better service to the country than in exciting enthusiasm over the irrigation of our great Western domain, and his efforts to prevent the absorption, by speculative companies, of fertile land capable of irrigation, and preserve it for the farmer, should be effectively seconded by Federal and local legislatures. His letter to the Irrigation Congress should find hearty response in the East as well as in the West.

As to the forest-reserve legislation of Congress, the only regret which we can feel is that it has come too late. But the terrible local floods which are becoming more and more frequent and disastrous are due to the denudation of the whole country, not only of trees, but of grass, through the overstocking of the ranges. As most of the plains and mountains over which cattle range are still within the public domain, it would be competent for Congress to apply some restrictive legislation to this glaring evil.

In view of the above facts, there is a strong opinion entertained by many old-timers, especially in Arizona and New Mexico, that storage dams should not be built across the beds of rivers, but that the water should be deflected during floods into artificial or natural side reservoirs, into which silt only, not heavy, solid matter, would be carried. The first large storage reservoir built in Arizona, at Walnut Grove across the Hassyampa, was carried away before even its basin could be filled by débris; but, as it was badly planned and badly built, its destruction offers no valid argument against the construction of others properly designed. Nevertheless, the ease with which it was battered down and swept away by the very first flood it had to resist, should serve as a warning.

THE GENERAL ELECTIONS IN ITALY.

FLORENCE, November 14, 1904.

The last battle has been fought out, the victorious candidates "proclaimed," the defeated survivors are carrying their dead and wounded from the battlefield, and no doubt remains as to the complete victory, so far as numbers go, of the Giolitti Ministry. By what means and with what allies the end has been attained are questions of more than ordinary importance, because, while the adage that possession is nine points of the law has been verified once again—the Government "in possession" winning, as has been the case in Italy ever since the days of Cavour—other elements have entered into the struggle which hitherto have been ostensibly absent. One of these is the participation of the real proletary *in propria persona*, without recognized leaders, or in despite of their mandates; the other, the open, acknowledged, numerous affluence of clerical citizens and parties at the urns.

When, after the defeat, at Sedan, of the Imperial restorer of Pio Nono to his temporal sovereignty over the Romans, the Italian monarchy entered Rome through the "sacrilegious breach" of Porta Pia in 1870, the majority of conservatives accepted the accomplished fact with sincere grief, while recognizing its necessity in the name of Italian unity, and also because the unanimous will of the nation compelled the monarchy to take possession of the national capital as an alternative to the restoration of the Roman Republic. Once in possession, the conservatives, who remained in power for the next six years, did their utmost to

bring about a reconciliation between the Church and State, offering by the Law of Guarantees such rights and privileges as would have placed public instruction, not only in the elementary and secondary schools, but also in the universities, entirely in the power of the cardinals, archbishops, bishops, and parish priests. Monasteries and convents could have been restored to their former supremacy, while the liberal laws on the press and public meetings would have been repealed or modified. Fortunately, Pio Nono, convinced that the Catholic world would restore the temporal power, rejected the "Tempter," answering "Non possumus"; declared war to the knife against the impious usurpers; forbade the faithful to recognize the government of Belial; ordered them to refuse allegiance to the chosen of the nation, to the King of the plébiscites. He thus lost the allegiance of all those Italians who were patriots and citizens first, then faithful believers in the doctrines of Holy Mother Church.

Two successive generations grew up in the belief that the one arch-enemy of their country was the self-constituted prisoner of the Vatican. Scientific studies and researches occupied the minds of the studious youth; the erection of the monument to Giordano Bruno facing the Vatican symbolized the challenge of modern Italy to the opponents of free thought and of free discussion. Still, a considerable portion of the populace adhered to the old order of things, and strictly obeyed the "non expedit," which prohibited them from becoming electors or elected in the political field. To take the oath to the King, to acknowledge the "inseparable welfare of monarchy and country," was tantamount to the renunciation for ever of temporal restoration—would, in the opinion of the hierarchy, alienate the hearts of foreign Catholics, and assuredly close the purses of foreign contributors to Peter's Peace and cut off other succor to the dethroned and "persecuted" pontiff.

Leo XIII. saw the falsity of his position, but could not remedy it; moreover, he was too intent on securing the alliance and protection of France to care much about the friendship of Italy, which, owing to her financial conditions and to her military disasters in Africa, seemed to him a negligible quantity; believing, too, that at any time he could, if he chose, come to terms with the coercionist governments that flourished during the last years of Humbert II. Gradually, however, many once ardent pro-temporalists grew weary of finding themselves excluded from the political life of Italy, and prevented from proposing or supporting laws in favor of religion and morality which they wished to enjoin on their children; and these gradually began to frequent the electoral committees and to deposit their votes in the urns in favor of candidates who would oppose the Divorce bill, support state legislation for religious instruction in the elementary and possibly in the normal schools, who would offer no opposition to the admission into Italy of the Congregations expelled from France. But their tardy offers of alliance were met with small enthusiasm. The old moderate party, "transformed" by Depretis and "disintegrated" by Crispi, still believed themselves capable of retaining in their own hands the reins of government, by their foreign policy tending to exalt the position of Italy in Europe, by restoring her finances, and by some attempts to lessen the fiscal exorbitance which weighs so heavily on the poorest classes. Moreover, they deemed the clerical party so hostile to the fundamental institutions of the new kingdom, especially during the pontificate of Leo XIII., that they deprecated the entrance of his supporters into the national Parliament. But the coercionist governments of the last years of the nineteenth century, the enormous increase of the Socialist and Radical parties, the advent of the young King and his open acceptance of Zanardelli and his followers, compelled them to face the fact that their reign was over; while the advanced programme of the Government, including the Divorce bill and the Claims of Illegitimate Children, etc., filled them with dismay. With the advent of Pope Pius X., the grand elector (at Venice) of clerical-moderate members of the Municipal Councils, well-known for his disapproval of the abstention of Catholics from the political elections, they commenced a propaganda for alliance with the Catholics, with the clerical party. The general strike and the abstinence of the Government during the entire period filled all the propertied classes with dismay; a general alliance of all parties against the subversives was decided on, and the clericals saw their opportunity of obtaining favorable terms of alliance. Throughout Italy the Catholic newspapers supported this view.

Pius X., though not prepared to abolish the "non expedit," had, it was affirmed, expressed his desire that the Catholics should exert themselves to rescue the masses, now organized by the Socialists "to make war on religion, on property, on the sanctity of the family," etc. The *Osservatore Romano*, the official organ of the Vatican, offered no protest when five noted leaders of the Catholic party came forward as candidates for election. Only the *Unità Cattolica*, the old standard-bearer of absolute intransigence, which, from the 20th of September, 1870, went into mourning for the loss of the temporal power, protested so long as the *non expedit* was not formally revoked by the Pope. Everywhere, and especially in the citadel of radicalism and Socialism, in Milan, arch-clericals presented themselves as candidates and were accepted with open arms by the moderate conservative party. In Florence, where there was no clerical candidate who had a chance of success, the moderates offered and the Catholics accepted an offensive and defensive alliance in order to oust the three Socialist candidates, who stood a fair chance of victory if opposed only by the conservatives; and both in Milan and in Florence the clerical-moderates have won a signal victory. In Milan the proletary contributed to the victory by rejecting the three Socialistic candidates who had, we may say, initiated and prolonged the general strike, viz., Labriola, Mocchi, and Lazzari; while Angelo Cabrini, though the candidate of both the evolutionary and revolutionary Socialists of Milan, a man much beloved for his long, strenuous, and practical exertions for the proletary, precisely because he had sanctioned the strike was rejected at the first ballot, and succeeded at the second only by the aid of the votes of Republicans and Radicals and the so-called Democratic party. Turati, candidate of the reforming Socialists and also of the Radicals, excluded from the Socialist party by the ukase of the revolutionists, came off triumphantly at the first ballot; but the *Avanti*, Ferri's Roman newspaper, persisted in omitting his name from the list of Socialistic triumphs. Much surprise was felt that Majno, candidate of the reforming Socialists and of the Radicals, did not even reach the second ballot; but the predominant note is the total defeat in Milan of the revolutionary strike-promoting Socialists. The proletary would none of them.

In Florence, at the first ballot, a quondam fierce radical, transformed into a fervent conservative on the eve of the elections, was elected in the second college, but in all the other three the conservatives and Socialists divided the votes pretty equally. Then the former joined hands openly with the clericals, under the guidance of the Archbishop of Florence, and carried the day in all three colleges, boasting that they had "purged Florence of the Socialistic pest." In Rome the fight was fierce and prolonged. In the third college no opposition was offered to Professor Baccelli, a physician of note, a one-time Vaticanist, who came over frankly to the national party in 1870, has been several times Minister of Public Instruction, and is a considerable personage among the freemasons. In the fourth college, out of 4,500 registered electors, only 2,160 went to the urns; 1,095 voted for Torlonia, about 900 for Socialists and Republicans. Torlonia, when Mayor of Rome, was deprived by Crispi of office for his visit to Pope Leo XIII., and is a noted "Black." In the fifth college, Barzilai (Republican) was elected. The great fight came off in the second college, where Ferri entered the lists in vain against the clerical Santini, who took occasion of the Pope's denunciation of Loubet's visit to the "King who detains the provinces of the Holy See," to demand and obtain an audience of his Holiness.

Of the elections in the southern provinces, and especially in Naples, it is impossible to speak intelligently, so excessive has been the oppressive interference of the Government, so violent the demonstrations of the Opposition; some of the presidents of the electoral committees withdrawing before the successful candidates had been "proclaimed," sometimes carrying off the ballot-boxes; while on one or two occasions the defeated party smashed them. Two cases are worthy of note. The ex-Minister of Public Instruction, accused and on trial convicted (by default) of illegal acts committed during his term of office, and of actual peculation, has been elected by an immense majority of his fellow-citizens, electors of Trapani. On the other hand, Pallizzolo, the notorious head of the Mafia, believed to be the instigator of the murder of Notarbartoli in 1892, three times tried, twice condemned, and finally acquitted by a Florentine jury last July, was rejected by his former electors in the second college of Palermo, to the great satisfaction of the entire city. In Turin and Venice the clericals and conservatives carried the day, as in Bologna partially.

The Socialists lose but one college, having now 31; but if we regard their voting strength, we must compare the figures for 1895 (76,359) with those for 1897 (134,502), for 1900 (164,976—in union with the "popular parties"), and 1904 (319,909—alone, Socialists pure and simple). There is not much comfort here for the united enemies of the

"subversives." The Radical, and especially the Republican, parties find their numbers slightly diminished; but, when all is admitted, and without counting on the double elections or on the twenty seats in which no candidate has been proclaimed and whose fate will be decided by the Board of Examiners—chosen by the President from all the factions of the Chamber—whereas the Extreme Left consisted of 107 members, they still present 96 uncontested members. The Constitutional Opposition, which looks chiefly to Sonnino as its chief, has lost three valuable members, but has also gained some seats. And now comes the crucial question: Of the nearly 300 members newly elected as conservatives, how many are ministerialists? That inquiry is giving Giolitti no small worry and uncertainty. They are absolutely united against the "subversives," but have given no sign that they approve the policy of the present Cabinet, or, rather, of its chief. Many are waiting to see to which side of the house he will incline. When Parliament opens on the 1st of December it is believed that the ministerial policy will be fully revealed. In December the municipal elections take place, and the new open alliance of the Blacks with the conservatives will bear its fruit even more fully than in the national elections.

J. W. M.

Correspondence.

A NEGLECTED AMERICAN AUTHOR.

To the Editor of The Nation:

Sir: In the New York *Times* Saturday Book Review of September 3, Mr. H. Bradley Jackson published a letter in which he asserted that the author of the once famous American novel, 'Alonzo and Melissa,' was his grandfather, Daniel Jackson, jr. A careful study of this interesting book has led to a different conclusion, which I present here, hoping to obtain further information on the subject.

In the Albany *Balance and State Journal* for January 8, 1811, there appeared the following "Literary Notice":

"American Tale.—A work in two volumes, entitled The Asylum, or Alonzo and Melissa, an American Tale, founded on fact—written by Mr. Mitchell (former editor of the *Republican Crisis*, published in this city), is soon to appear. The following lines of Dr. Dwight are prefixed as a motto. [Here follow eight lines from Dwight's 'Conquest of Canaan,' Book five.] From the known talents of the author, and the pains which we understand he has bestowed on this work, we have reason to expect a well-finished and interesting tale."

The first edition, in two volumes, with the title as given above, was published in Poughkeepsie under date of 1811. The copyright notice, printed with the book, is dated December 2, 1810, and gives as the author's name I. Mitchell. In the New York *Columbian* for October 9, 1811, the book is advertised as "An American Tale, Founded on Fact, by I. Mitchell," and in the same paper for Wednesday, October 16, the work is described as "A new, interesting, and American novel" by "I. Mitchell of Poughkeepsie, late editor of the *Farmer's Journal*, the *Political Barometer*, and the Albany *Crisis*."

Of Mr. Mitchell little is known. Mr. Jennings of the State Library at Albany informs me that there is no reference to Isaac Mitchell in Munsell's 'Annals of Albany,' nor in Weise's 'History of the City of Albany,' but in Howell and Tenney's 'History of Albany and Schenectady Counties' there is the following item, page 375, in a list of the Albany press: "1806. November 11. The *Centinel* revived in the *Republican Crisis*. Backus and Whiting, then Isaac Mitchell, publishers. 1808, Harry Croswell & Co.; William Tucker, printer. In 1809, name changed to the *Balance and New York State Journal*. Removed to Hudson in 1811." There is no Albany directory previous to 1813, and Mitchell's name does not appear in the directories from 1813 to 1820. Apparently a successful editor, he seems to have lost his position through political changes, for he says in the preface to the first edition of his novel: "You know that by the fate of battle (a political conflict) I have lost a station which, if not lucrative, yet admitted free employment of the pen." Evidently he retired to Poughkeepsie, where his book was published, for the New York *Spectator* of February 8, 1811, contains a notice of the marriage of "Miss Aurelia Mitchell, daughter of Isaac Mitchell, Esq., of Poughkeepsie, late editor of the *Republican Crisis* in that city." From the citation given above, there seems to be an error in this announcement, for the short-lived *Crisis* was an Albany, and not a Poughkeepsie paper. The city library of Poughkeepsie has no local history that mentions Isaac Mitchell, and in the genealogies of the Mitchell family to which I have had access, his name is not found. We can at least assert that he was a trained writer, and by no means a young man when his book was published.

'The Asylum' appeared at an unfavorable time for critical appreciation. In October, 1811, the papers were filled with accounts of Bonaparte's campaigns, or were justly aroused over the country's approaching war with England. Apparently they did not review the book. It had its faults; among others, it was too long. Of the two volumes, the first contained an Introduction, a most entertaining "Preface Comprising a Short Dissertation on Novel," and a lengthy episode that has practically nothing to do with the main plot. A neighbor of Melissa, the heroine of the novel, gives to her a manuscript account of her life. It was an exciting story of her escape from the clutches of an Austrian nobleman, an elopement, duels, assassinations, headlong flights through Austria, Germany, France, and England, until the peaceful streets of Boston were reached. Even in those days Boston was considered a city of refuge. We suspect that the 'Asylum' was not favorably received, for when we next hear of the book it has undergone a radical condensation. The Introduction and the Preface have been omitted; the long episode has been discarded, thus reducing the book to a single volume; the title has been changed to 'Alonzo and Melissa, or the Unfeeling Father,' and Mr. Mitchell no longer appears on the title-page as the author, but instead is the name Daniel Jackson, jr. I have not been able to discover whether Mr. Mitchell had any part in this revision of his work.

The success of this new edition was phenomenal. With but little trouble I have found editions of 1824, 1830, 1831, 1832, 1836, 1839, 1842, 1846, 1847, 1848, 1853, 1864, 1879. Doubtless this list could be doubled, and if one may refer to this period the numerous undated editions, it would appear that for nearly a quarter of a century a new edition of 'Alonzo and Melissa' appeared practically every year. It was reprinted in every section of the country—the North, the South, the Middle West. It is not too much to assert that it was one of the most popular novels ever published in America. It was not a book for the unfeeling multitude—it was read by the first families of the land; yet it is now so completely forgotten that historians of American literature never give it even a passing reference. It well deserves to be reprinted, not only for its unconscious humor, but also because it shows most strikingly the influence of Mrs. Radcliffe and the Gothic Romance on our early American writers.

Edward B. Reed.

Yale University, December 1, 1904.

Notes.

E. P. Dutton & Co. are the American publishers of Stubbs's 'Cambridge and its Story,' noticed in our last issue, and inadvertently ascribed to another firm.

Macmillan Co. closes its more important fall issues directly with 'The Memorials of Edward Burne-Jones,' by his widow, in two volumes with forty photogravures; Mr. Bryce's revised 'Holy Roman Empire'; 'Studies in Montaigne,' by Miss Grace Norton, in two volumes; and 'Modern Charity Systems,' by Prof. Charles R. Henderson.

A. C. McClurg & Co., Chicago, will publish 'Trials and Triumphs: The Record of the 55th Ohio Volunteer Infantry' in the civil war, by Capt. Hartwell Osborn and others.

The Philadelphia firm, the John C. Winston Company, has taken over the entire publishing business of Henry T. Coates & Co., Mr. Coates becoming a stockholder in the amalgamated concern.

The eight volumes of Mr. R. G. Thwaites's "Early Western Travels, 1748-1846" (Cleveland: Arthur H. Clark Co.) is compounded of reprints of Tilly Butterick, jr.'s, rare 'Voyages, Travels and Discoveries' (Boston, 1837), and 'Estwick Evans's 'A Pedestrious Tour' (Concord, N. H., 1819). Butterick's comparatively brief narrative opens in Robinson Crusoe style, and a voyage round the world precedes his account of journeys in the United States; his observations thus embracing Madagascar as well as the Choctaws and Chickasaws of the Gulf States. Evans, on the other hand, takes us among the New York Indians, the Tonawandas and Tuscaroras. His observations are lumbered with much moral disquisition, but he was a humane man, and his shame at slavery is to his honor. He frequently recurs to the subject, and advances a scheme of emancipation through the Government's buying in the slaves, who must eventually ransom themselves. His reasoning about slavery and race prejudice is worth reading still.

About two years ago we called attention to the merits of Cornelius von Fabriczy's little treatise on Italian medals. It is now to be had in an adequate English translation and in much handsomer form. The plates are still half-tone, frequently from the old blocks, but all the Pisano medals have been rephotographed without reduc-

tion of scale—a considerable advantage. The grouping of several medals on one plate is also convenient, affording the juxtaposition one would find in a well-arranged collection. Enough is said to show that this sterling work in the improved form given it by Messrs. Duckworth (New York: E. P. Dutton & Co.) may be cordially recommended to all lovers and students of the medallist's art.

'London in the Time of the Tudors,' by the late Sir Walter Besant (Macmillan), makes a handsome holiday volume with its large print and its copious illustrations. Since the time of Dickens, no English man of letters has had a deeper affection for the great city in all its phases than Besant, and if he was led to explore its antiquities the motive can easily be found. There is little attempt in this book to write brilliantly, for the author knew his limitations and refrained from all rivalry with the famous passage on London in Macaulay's third chapter. Besant aims at supplying lively and accurate information, partly through a narrative of events, and partly through short essays on social usage, trade, costume, the poor, theatres, crime, and a large number of other similar subjects. One to whom the *genius loci* meant less, might have yielded to the temptation to interweave national politics with local history and manners, for in many ways the annals of London are those of the realm. This danger, which is a very real one, was avoided by Besant, to the great advantage of this and other writings. The present work contains such a large and varied body of evidence regarding popular life in the Tudor period that it should not be omitted from any library which contains Traill and the illustrated edition of Green.

Two new volumes of "Newnes's Art Library" come to us from the New York publishers, Frederick Warne & Co. They are devoted to 'Raphael' and to 'Constable's Sketches' respectively, and are similar to former volumes in general scope. The half-tone reproductions dispense with the tint, but are much better in quality than those of the 'Velasquez' and 'Reynolds'. In addition to them there is a photogravure of Raphael's "Spozalizio" in the one, and two bad color prints in the other. There is the usual minimum of text, good enough as far as it goes in the case of the 'Constable,' but almost incredibly silly and inaccurate in the 'Raphael.' The inaccuracy runs, also, into the titles of the plates, which contain one or two blunders and several infelicities.

'The Life and Art of Sandro Botticelli,' by Julia Cartwright (London: Duckworth; New York: Dutton), should make a most acceptable gift-book for that growing class of people who take a more or less serious interest in art. Without pretension to originality of view or personal connoisseurship, Mrs. Ady shows a thorough acquaintance with the literature of her subject and sound judgment in following this or that authority, nearly always choosing the more probable among contesting theories, while her knowledge of the general current of the Italian Renaissance stands her in good stead and keeps her hero always in his proper atmosphere. Nothing better in the way of a popular book on Botticelli could be desired; it is well and appreciatively written, gives a fair and adequate view of the present state of knowledge of the painter's life and works, and as much criticism as is suited to the average digestion. It is illustrated with two photogravures (one of them after Mrs. Gardner's "Chigi Madonna"), and a number of half-tone plates, full-page and in the text. Unfortunately, the full-page plates often duplicate the subjects of the smaller cuts, so that there is some waste of effort in the latter, while interesting works, though not first-rate ones, remain unillustrated. The presence of the text illustrations has necessitated the use, throughout, of glassy, coated paper.

'A Transplanted Nursery,' by Martha Kean (The Century Co.), is the pleasantly written account of a summer spent in Brittany by a family consisting of a mother and three phenomenally good small boys, and is intended to show that a nursery may be transplanted to foreign shores with as much safety and at as little cost as if it were merely moved from town to country. The account is given in "letters home," which sound very genuine—the sort of letters one is delighted to receive, full of personal news and with occasional guide-book touches, but not such as one would have thought worth printing in an age before that in which every one has become an author. The book is illustrated with the writer's "kodaks," in which the small boys frequently form an attractive foreground incident, and certainly succeeds in maintaining an agreeable atmosphere of foreignness. We suspect, however, a superfluous *a* in the name of "Serapolette"—a donkey, as amiable as its temporary owners, who appears frequently in picture and text.

'New Forces in Old China,' by the Rev. Dr. Arthur Judson Brown (Fleming H. Revell Co.), is an admirable report concerning the "unwelcome but inevitable awakening" which is to come to the people of the Middle Kingdom. This is probably about as good a book as could be written by one who, as a keen observer, moved through the country, and gathered up opinions and impressions from aliens dwelling long in the land. It is admirably illustrated, and the style is brisk and of the sort which a busy man enjoys. Dr. Brown discusses the commercial and economic forces, showing also the political movements, and the national protest against the abominable injustice of the so-called Christian Powers of the world. One chapter treats of the missionary force and the Chinese church with commendable frankness and fulness, leaving the impression on the reader's mind that the responsibility for the evils under which China suffers is to be shared to the extent of at least one-half by the peoples called Christian. An index and a map make this work, which contains much reprinted matter, especially useful for the student, nor is its value lowered when we find that Dr. Brown's opinion of the Chinese is very high, as of a race that is much more likely to subdue and replenish the earth in the way the great Master has pointed out, rather than by methods of aggression and bloodshed. He is sure that in qualities which are profound rather than showy, the Chinese far excel the Japanese. Our hearty praise of the book must be qualified because of the inevitable limitations which this author, one of the best-intentioned officers of any missionary board, ignorant of the language and to a large extent of China's real history, reveals on many a page. From inability to do more than scratch the surface of things Chinese, however clearly he may set forth surface phenomena, the author's explanation of the Boxer uprising is decidedly unsatisfactory. Nothing whatever is said about the fact that neither the President nor the Senate of the United States has ever yet manifested the slightest approval of the American commander of the naval forces who refused to join with the foreign admirals in making war on China, thus letting loose the regular military on the people in the Legations and other foreigners. Some few inevitable misprints, such as Nevins for Nevius, occur. One wonders why a dignified author, even though he accepts the 'Letters of a Chinese Official' as genuine, can use the vulgarism "Japs" for Japanese.

Between the Occidentals, who can scarcely admit that there is such a thing as a degenerate race having a white skin, straight-set eyes, and luxuriant face hair, and the Japanese, whose conceit shudders at the idea of descent from the "Ainos," these long-secluded islanders have difficulty in securing recognition at the hands of either science or just sentiment. Untrustworthy and sensation-loving travellers, both men and women, who have never seen a regiment of United States soldiers in swimming, have exaggerated the capillary and other peculiarities of these "poor whites" of Asia. Nevertheless these women, with mustachios tattooed round their mouths, and these men, so brawny and yet so gentle, have at last, in the missionary Batchelor, the linguist Prof. B. H. Chamberlain, and the Japanese ethnologists of Tokio, found earnest students of their origin, career, and conditions. Prof. Frederick Starr of the University of Chicago, in an exceedingly modest little book of 118 pages, on 'The Ainu Group at the St. Louis Exposition' (Chicago: The Open Court Publishing Co.), has told of his experiences in the island of Yezo, which he reached without challenge from a Russian cruiser, and which he traversed in order to get a party of Ainus to accompany him to St. Louis. Though giving only a simple narrative and description, Professor Starr's booklet has really more intrinsic value than some quite pretentious works that have shed darkness on a most interesting subject. In undogmatic style he suggests questions regarding these unique people, and handles quietly but rather severely certain statements and crude theories set forth by writers who were without knowledge of the language, or who made no stay in the islands sufficiently long to furnish perspective. Professor Starr finds in the Ainu "a white race that has struggled and lost." He expresses his high appreciation of the scholars who have scientifically investigated the Ainu myths, speech, customs, traditions, and the evidences of their occupation, in earlier centuries, of central and southern Japan. The illustrations from photographs, though poorly reproduced, are excellent for their purpose, and we have in this brochure a real addition to our knowledge of the earliest known race in the Japanese archipelago.

The 'Cummings Genealogy,' prepared and published at Montpelier, Vt., by Albert Oren Cummins, of the ninth generation

from Isaac Cummings, is an intelligent and technically irreproachable family history. "Isaac Comins, Senior," whose will was probated June 14, 1677, was a settler in Ipswich, Mass. His descendants have taken great liberties with the spelling of his name, the majority following the New England tendency to change the ending -en or -in to -ing. The compiler has gone with this majority in his book, even to spelling his own name Cummings in its chronological place at page 557, but Cummins on the title-page as on his bank checks. His motive has been the simple truth so far as it could be ascertained, and he has not sought by embellishment to avoid a dry chronicle of facts. There is some good reading in extracts relating to collateral ancestors, and an occasional characterization is full-bodied. The stock appears to be simple New England, largely agricultural and mechanical in its occupations, with but few shining lights. College graduates are relatively rare. Loyalists and patriots divided in the Revolution; one solitary Cummings (of this line), having been born in the South, was subdued to it, and served in the Confederate ranks against his kinsmen. One turned Mormon, and his son had a "first wife" living twenty-one years after his death. Inventors have been numerous and clever. Joshua, of the sixth generation, removed from Leominster to Westminster, Mass., for the better education of his children, and was richly rewarded in them. There are a few portraits, all typical and suggestive; none more pleasing than that of the compiler.

The distinction of the 'Dexter Genealogy, 1642-1904,' begun by John Haven Dexter, carried on by Orrando Perry Dexter, and now arranged by Henry L. Miles (American News Co.), is that, by an ingenious system of "superior figures"—in printer's parlance—the authority for every statement is given where possible. No. 99, which stands for Family Bible, of course recurs constantly. The whole aspect of this genealogy is therefore most businesslike and self-commending. The family name is eminent in New England, and the more prominent descendants of Richard Baxter (1606-1680) receive relatively long biographies; that of Mr. O. P. Dexter being as interesting as it is tragic. Andrew Dexter (1779-1837), a native of Brookfield, Mass., founded the city of Montgomery, Ala. Samuel Dexter (1761-1867) sat in both houses of Congress, and was Secretary of War and of the Treasury. The one plate is a charming view of the old Dexter mansion in Malden, Mass., standing on property purchased from the Indians by Richard Dexter in 1663, and still occupied by his posterity. Only 400 copies of this work are issued.

The seventy-two laboratory exercises contained in Prof. J. C. Olsen's 'Text-book of Quantitative Chemical Analysis' (D. Van Nostrand Co.) appear to us to be judiciously chosen and admirably described, and altogether to be calculated to make a skilful analysist of the student. So much of the other matter as is naturally wanted along with the exercises, to furnish information about quantitative analysis that is indispensable to the young man entering upon it and acquiring his first skill, is also good. But whether, over and above that, it was worth while in a single volume to penetrate further into the vast mass of details, or to undertake more than to direct the student to the different books and papers, with hints as to the use of them, is a question not easy to answer to one's own satisfaction.

An interesting attempt to give permanent value to a second-hand-book catalogue has been made by the newly established firm of Rudolf Haupt in Halle, who prefaces a recent catalogue of books on bibliography and printing with a sketch by Professor K. Haebler, entitled "From the Beginnings of the Book Trade." It deals with early book advertisements, and traces their development from circulars about single books to lists of books printed by the same printer or for the same publisher, and finally to the appearance of catalogues of books issued by several publishers or printers, and collected in the shop of the same dealer. The early development of the book trade in Venice is described, and it is shown how the printing of books became in that city for the first time a branch of manufacture, and the selling of books a business pure and simple. Here were to be found, as early as before the year 1500, nearly all the features of the modern book trade.

The *Magazine of American History*, with Notes and Queries, is to be revived after a long eclipse. It will be published monthly at $5 per annum by William Abbatt, at No. 281 Fourth Avenue, New York. The first number will probably be issued in January.

Prof. G. Frederick Wright assumes the editorship of *Records of the Past* (Washington), which enters upon its fourth year in January.

In the *National Geographic Magazine* for November Prof. F. H. Bigelow describes the new research meteorological observatory at Mount Weather, Bluemont, Virginia, about sixty-five miles northwest of Washington, and its work. It is proposed to establish a physical laboratory there "to accommodate experiments in meteorological physics, in the improvement of instruments, in atmospheric electricity, ionization, and radioactivity of the air and of soils, and other research investigations." Another paper deals with the methods of Government assistance in handling forest lands. A résumé of an essay on the "Foreign Commerce of Japan since the Restoration, 1869-1900," is by Yukimasa Hattori, a student at Johns Hopkins University. In referring to the probably large increase in importations of food products in the near future, he calls attention to the fact, almost without a parallel, that the Japanese farmer understands his work "so thoroughly that, by elaborate means of irrigation and the skilful use of fertilizers, he has been able to obtain rich harvests from the same land during fifteen or twenty centuries." There is also given the substance of Sir F. D. Lugard's address before the Royal Geographical Society on northern Nigeria, with numerous interesting illustrations.

The *Geographical Journal* for November opens with an illustrated description of the little known country between the Niger and Lake Tchad, by Col. Elliot of the Anglo-French Boundary Commission. Among the scientific results of this expedition was the discovery of fossils showing that the Mediterranean once extended to this region. Some of them are distinctly of an Indian character—a sea-urchin being of a kind hitherto described only in Sindh—which would indicate, according to Dr. Bather of the British Museum, a connection of India and the Sahara in early geologic ages. Col. Elliot referred to the lawlessness of the country when he passed through it in 1902, which was before the British occupation. Now, says Major Burdon, the officer in command of that district, "that lawlessness does not exist; and there is nothing more striking or encouraging in the result of British occupation than the way in which the people allow all their fortifications and walls to fall into decay at once. They say openly they no longer have any need of them." The remaining contents are an account of the survey of the fresh water lochs of the Ewe Basin, Scotland, and Dr. Sven Hedin's interesting and characteristic preface to his forthcoming "Scientific Results" of his last journey, to which we have already referred.

African railways are the subject of the article of most general interest in the *Annales de Géographie* for November. The accompanying map, showing the roads in operation and those under construction, as well as the lakes and rivers on which there is steam navigation, gives a vivid impression of the number and extent of these paths of commerce through the Dark Continent which have been opened during the past half century, for the first railway was constructed in Egypt in 1852. Other topics are instruction in topography as preparatory to the study of geography, and the cartography of Spain, with an account of the principal maps of the country, from that of Lopez published in 1765-98 to those very recent ones of the French Alpine Club, chiefly of the Pyrenees. In an interesting notice of the changes wrought by the industrial *"boom"* in northern Spain, mention is made of the fact that the change of Santander from being merely a port for colonial commerce into a mining and manufacturing community is due mainly to the Spaniards who left the West Indies in consequence of the war and settled there.

—In a very real sense, Andrew D. White's initial paper on Hugo Grotius, in the December *Atlantic*, might be called the most timely contribution of the number, though it is too much to expect that many readers of to-day will stop to recognize and reflect upon the lessons which the career of the great Dutch publicist has to offer to the present generation. The first important work of Grotius, the *Mare Liberum*, became the herald of a new and better epoch, we are told, because it laid its foundations in the doctrine of the inalienable rights of mankind—a doctrine not exactly popular just now, as it does not square with dominant tendencies in national development. This study of Grotius is one of the series of papers which Dr. White has prepared under the general title of the "Warfare of Humanity with Unreason." Samuel P. Orth contributes a paper on "Our State Legislatures," a large portion of which is devoted to a minute analysis of the make-up of four typical legislative bodies, leading to the conclusion that they are really fairly representative of the people by whom they are elected, however unsatisfactory their legislative product may be. This conclusion is true enough if one has in mind a representation merely of the average ability and honesty, but it is not true at all if

the average desire of the voters as to the official action of the men chosen be taken into account. The only hope for our legislatures lies in the fact that nine voters in ten really want something very much better than they get from the men now selected to represent them. A paper on Emerson by Henry James, sr., now first published, is sure to attract attention. The way in which Mr. James found his imagination captivated by contact with Emerson, regardless of the question of intellectual assent to his teachings, is suggestive of some of Lowell's comments. A large portion of the paper is devoted to a comparison of Emerson with Carlyle, much to the credit of the former.

—Mark Twain opens the December *Harper's*, not with an example of the humor which was formerly almost synonymous with his name, but with a glowing appreciation of that feminine wonder of the ages, Joan of Arc, whom he does not hesitate to characterize as "easily and by far the most extraordinary person the human race has ever produced." Perhaps this valuation would be more generally accepted if her alleged achievements were not so very extraordinary that, in spite of the oath-supported official records of her trial and rehabilitation, the average human faith finds itself unequal to the task of believing. But it is too pretty a story to submit to the scalpel of the historical critic. Howard Pyle furnishes four full-page illustrations in color. Under the heading of "London Films," Mr. Howells develops in his attractive way sundry impressions of a springtime visit to the metropolis. For a leader of the realists, one finds him perilously near the edge of a kind of reversed idealism in describing a bedroom grate as "of the capacity of a quart pot and the heating capabilities of a glowworm." And still for English chilliness he finds some compensations. To Lowell's contention that it does not wet one to stay out in an English rain, he adds that the English cold will not chill you if you only stay outdoors in it. With the outdoor dress of the English women and girls he is quite enamoured, finding in it decidedly more of sentiment than is put into feminine apparel on our side of the water, though the dress of any given English woman "is no more expressive of *personal* sentiment than the chic of our women's dress is expressive of personal chic." In the "Easy Chair" he laments that the results of international copyright have so far failed to fulfil the hopes with which it was inaugurated. With pirated cheap editions no longer accessible, we do not purchase English printed books, nor will we reprint even their best works unless the chances are apparently good that they will sell as readily as our own trash. But "better our historical novels and a good national conscience than the best English fiction and the sense of having robbed the author."

—The one article of serious import in the Christmas *Scribner's* is an appreciation of Veronese, by Kenyon Cox. In an age that courts the specialist, the fame of Veronese suffers because of the very completeness of his development. His excellence in all the qualities that go to make up the artist is so great that there is no contrast by which to measure the greatness of his excellence in any one of these qualities. With this well-rounded completeness go sanity and simplicity, no work for the reader of riddles, no cunningly devised new ways of telling old stories. As a master of portraiture he fails, if at all, only in not suggesting that intensity of inner life which a few of the greatest painters now and then succeed in conveying to us; but his aim was the large and general view, not the intimate. In handing down to us the portraiture of his time, the types and costumes of his epoch, Mr. Cox considers him without a superior, if not without a rival. For sheer profusion and abundance Rubens alone was like him, but Rubens lacked his taste and his reticence. In conclusion, "if respect for the achievement in one or another direction of this or that mighty artist forbids us to call him the greatest of masters, we may yet, with assurance, proclaim him the completest master of the art of painting that ever lived." The Field of Art is given up to an illustrated description, by Russell Sturgis, of the great bronze doors which have recently been installed in the Boston Public Library, fronting Copley Square. The point especially noted in these doors is the almost absolute exclusion of the purely decorative element; the human figure, in each of the six valves, forming practically the whole design.

—Andrew D. White begins in the December *Century* a new series of diplomatic reminiscences, covering his experiences as Ambassador at Berlin, 1897-1902. Naturally, the first thing to be forced upon his attention was the failure of Congress to support the new dignity of the ambassadorship by providing the needful material appliances. It was only after a long search that a residence was found which was at all suitable for the functions demanded by court etiquette; and before his service was ended, even this was purchased from under his official feet by one of the smallest Powers in Europe as a residence for its minister. His position was rendered somewhat uncomfortable by the bitterness of feeling against the United States, growing out of the McKinley tariff and the Spanish war. As to the latter, he reiterates, what all well-informed people know, that the judgment of the President was strongly against the war, and that he was finally brought to support it only by the accumulation of forces which he could not control. He expresses his belief that the disaster to the *Maine* was from the outside, but was the work of wild local fanatics, not participated in by any Spanish officer or true Spaniard. Some especially interesting paragraphs at the close deal with Mommsen's attitude towards the United States during these years. The aged Latinist and philosopher showed some signs of relenting at the end, but perhaps his attentive listening to Dr. White's *apologia pro sua patria*, at the farewell dinner, and his hearty handshake when it was over, were more in the nature of a personal tribute to a valued friend than an indication that he had altered his opinion as to our apostasy from our earlier and better traditions. A paper on the method of purifying drinking water by the use of copper sulphate, recently developed by Dr. George T. Moore of the Bureau of Plant Industry, seems to demonstrate that a new health agent of the highest importance has been discovered, economical, easily applied, and needing only intelligent handling to become an effective prophylactic against a large class of diseases.

—A fifth edition of the late William Edward Hall's well-known 'Treatise on International Law' has been brought out at the Clarendon Press (New York: Henry Frowde). The editor is J. B. Atlay, who at the time of the author's death in 1894 completed the preparation of the fourth edition. The last edition, completely revised by the author himself, was the third, which appeared in 1889, so that a thoroughgoing revision might have been made. The editor, however, says in his preface that he has confined himself, in the introduction of new matter, to "what seemed absolutely necessary in order to bring the book up to date." He mentions "events in Japan and China," the Venezuela boundary dispute, the Hague conference and its results, and incidents in the Spanish-American and Boer wars, as among the topics which demanded notice, and adds that all additions going beyond mere verbal alteration have been bracketed. On consulting the index under these heads we do not find a dozen pages of additions, while, owing to typographical changes, the actual bulk of the book has been reduced by some thirty pages. The additions, so far as they go, are valuable, but the work of revising Hall's masterly treatise and bringing it down to date is still open; especially since the great war (which, as he prophetically said fifteen years ago, would be the test of the sanctions established by the modern law of nations) has already produced a new crop of pressing questions. Of the book itself it is unnecessary to do more than to say that, even with slight reëditing, it bids fair to hold its own for a long time—until some new master, a fit successor of Grotius, Vattel, Kent, and Wheaton, and Hall himself, shall once more appear. The subject becomes with each generation increasingly complex and difficult, the accumulation of material to be dealt with more and more vast, and the time requisite for its original study greater and greater.

—Mr. Marcus P. Dorman's 'History of the British Empire in the Nineteenth Century' (Lippincott) advances with the second volume to the campaigns of Wellington and the policy of Castlereagh. The author is extremely fond of general statement, as may be seen from the opening words of his preface: "The fate of the modern world was determined during the first quarter of the nineteenth century. Indeed, the issues of that period were the most important which have ever occurred in the history of mankind. Kingdoms were broken up and rebuilt, monarchs were raised from the people, crowned and dethroned, and new systems of government were invented, tried, and discarded. The Pope was hurled with violence from his chair and restored by force of arms. Treaties and laws were made and broken every few months. . . . Everywhere force reigned triumphant." This passage is designed to prepare us for an account of the duel between Napoleon and Wellington, which forms the main topic of the book. After Mr. Dorman has got past the Battle of Waterloo, he gives a synopsis of English political history that covers Castlereagh's relations with the Holy Alliance, the Manchester Massacre, and the Royal Divorce bill. There is also a chapter, not too deep, on the intellectual life of the

period, besides one on industrial progress. What we fail to understand is the amount of neglect which, in a work with such a title, the Colonies and India receive. In connection with the war of 1812 Canada gets rather less than three pages. This is the only notice given to it, and apparently Mr. Dorman does not know the difference between the Quebec Act of 1774 and the Constitutional Act of 1791, since he says: "The Quebec Act of 1791 arranged for an Assembly to be elected by the people on a limited franchise." Now it is a notorious fact that the Quebec Act did not provide for any popular assembly at all. India and Ceylon fare somewhat better in respect to the space allotted, as they get twenty-four pages out of three hundred and fifty-eight. We make the foregoing statement to show that in this volume at least Mr. Dorman says comparatively little about the British Dominions over sea.

EVERETT'S ITALIAN POETS SINCE DANTE.

The Italian Poets Since Dante. Accompanied by Verse Translations. By William Everett. Charles Scribner's Sons. 1904.

To read Dr. Everett's entertaining Lowell lectures is to go back at least two generations in the method of literary criticism, to the days when Lockhart and Gifford and Jeffrey and Macaulay thundered their opinions in the *Edinburgh* or the *Quarterly*. "I like this—therefore it is good!" "I detest that—therefore it is bad!" were the keynotes of that earlier, cocksure school of critics. We have substituted for them the so-called scientific critics, men who study an author as naturalists study a clam, and who hesitate to praise or blame lest they should seem unjudicial. But, after all, great books are the utterance of men, addressed to men, and they will attract or repel strong natures just as living persons do. Neutrality towards them may be the ideal of the scientific student of literature, but it is not always the proper attitude. The judge on the bench is pledged to fairness, but that pledge does not prevent him from having passionate friendships and pet aversions; from being, off the bench, a doting father and stanch hater. So Dr. Everett feels vehemently, judges absolutely, and gives his verdict without hesitancy. The result is refreshing, if for no other reason than because it is out of fashion.

True to his earlier models, he does not attempt to treat literature as an evolution. The *Zeitgeist* troubles him not. He ignores the "moment" and the "milieu," except in so far as he needs to know the general environment of his poets in order to narrate the principal events in their lives. He does not account for the sunshine in Ariosto's poetry by the cucumbers Ariosto may have eaten, nor trace with the specious assurance of some recent critics the literary relationships of all his writers. And here again the result is refreshing, for it breathes the charm of novelty.

We would not imply, of course, that the old method, the method of Jeffrey and of Dr. Everett, is better than the method of Sainte-Beuve, or of the later critics who may be regarded, *sed longo intervallo*, as his successors; but, for a change, it is stimulating, and in the hands of so alert and independent and witty a champion as Dr. Everett we see its merits at their best. And his opinions, be it noted, differ from those of the average impressionist critic—who is the modern version of the earlier cocksure variety—in that Dr. Everett speaks from a life-long acquaintance with classical literature and with the masterpieces of the modern world, whereas the impressionist is usually familiar with only a small section of the recent belles-lettres of a single country.

Dr. Everett's plan includes a biographical sketch of each poet, a description of his chief works, some comment on them, and liberal specimens, in English translation, of representative poems. The sketches are almost invariably excellent. Rapid, pithy, and clear, they give the characteristic features, and something more than the popular estimate of each man; but in the case of a complex nature, like Torquato Tasso's, for example, we feel that clearness has been achieved at the expense of the fact. The complexity, the neurotic basis, of Tasso's temperament should be explained more fully, and the reasonableness of the attitude of Duke Alfonso should be more insisted on. The old legend that the Estensi were at first callous and then cruel to the unfortunate poet, has been pretty much dispelled, as has the scorn of Leonora for him; but the legend, fortified by Goethe's splendid drama, dies hard, and it is all the more necessary, therefore, that critics and literary historians should bear testimony to the truth. We may say the same of Dr. Everett's treatment of Leopardi, who also was a complex character requiring a much subtler analysis than Dr. Everett has given him. But in the main he does outline fairly the individuality of each poet, and when he comes to one after his own heart, like Alfieri, he writes with infectious enthusiasm.

Although he avowedly turns his back on the *Zeitgeist*, he yet furnishes some striking surveys of more than one epoch. In the course of a few pages he summons before us Petrarch's environment at the sunrise of the Renaissance, and Ariosto's at its zenith, or he reveals the degeneracy, social and political, amid which Filicaja flourished. But the special strength of the book lies, of course, in its literary criticism, which is compounded of two elements—thorough familiarity with the great classical tradition, and Dr. Everett's personal idiosyncrasy. His classical training usually prevails, but at times it cannot restrain him from breaking out in the expression of personal prejudices, we had almost said of "whims," after the manner of the wildest romanticist. Fashion does not bind him, nor convention check. He praises Byron, and dismisses Wordsworth with less than damning praise; he laughs at Browning cults; he abominates Whitman; he ridicules by implication the "action" in recent tragedies—"what the jargon of the modern theatre calls 'business'"; he disparages the poetry of transient emotions. Over and over again he inveighs against that tendency, now more than a century old, which magnifies nature at the price of neglecting or belittling man.

"In the present day," he says, "when all that is asked of a poet is *to oblige nature to talk*, and to turn everything into something else, this air of active life, of social exercise, of interest in men as men, may seem [in the Italian poets] commonplace, but in due time the wheel will come round, and people and critics will once more recognize that Homer set the true key for all poetry. Watch Nature in all her moods as you will—she is only the great palace in which the Father has set His children to dwell; and the real shadow and sunshine is in the words and hearts of men."

That criticism, whether we call it Classical or Romanticist, scientific or cocksure, is fundamentally sound. And since we have quoted Dr. Everett in a mood of negation, we cannot refrain from quoting him in a mood of enthusiasm. Has any recent American critic surpassed the eloquence of the following passage?

"It was best that the pastoral drama should be done once for all so well that no one should dare do it again—and it was done. It was handled by one who had a tenderer sense of melody than Fletcher, and a richer imagination than Ariosto; whose ornaments sink Guarini's to the stage jewels that they are, and might make Petrarch wish his gems had a finer setting; one who in delicacy was equal to Tasso, and in austere grandeur to Dante; who could rise to philosophy loftier than Lucretius, and thrill the heart with harmony like Virgil; whose compliments Shakespeare might raise his head from golden slumber to hear, and whom Homer might claim for the long line of his offspring; who had climbed a holier mount than Parnassus, and drunk of a more sacred spring than Castaly; who had soared to heaven on the wheels of Ezekiel and felt his lips touched by the coal of Isaiah; and of whom the amazing glory is that his pastoral—his 'Comus'—is not the finest work of John Milton."

Striking passages are too numerous to be mentioned here. The humorous descriptions of the incongruities and absurdities of the metrical romances whose heroes and heroines "are able to go without eating or drinking for an indefinite period of time," and of the pastoral dramas in which "everybody appears to have Mr. Jesse Collings's three acres and a cow multiplied many times over," are capital; but most important, to our thinking, is Dr. Everett's general interpretation of the Italian poets as the successors and real continuers of the classical tradition. However romantic or modern their theme, they were all, down to the eighteenth century, trained in the Latin learning, which Dr. Everett rightly regards as a great merit. To that classical inheritance he attributes the sense of form, the respect for symmetry, and the love of harmony, which distinguish the chief Italian poets. We are glad to see, also, that Dr. Everett lays stress on the "native strength of Italian," a trait too often overlooked.

Of the more than sixty pages of metrical translations much can be said in praise. Dr. Everett himself made most of them, and they excel in sonorous quality. Having a talent for declamation, he has naturally been drawn to those passages which declaim well. We regret that for "Il Cinque Maggio," the only specimen of Manzoni, he preferred A. H. Everett's somewhat archaic paraphrase to Mr. Howells's remarkable version. The selections are generally typical, except in the case of Leopardi, who is represented only by "Il Sabato del Villaggio," "Il Passero Solitario," and four stanzas from the "Batracomiomachia." Petrarch also seems slighted without some quotation from his great patriotic odes. But in this matter a reviewer must not be too exacting. Rather than magnify shortcomings, he will heartily commend Dr. Everett's lectures. No such entertaining literary criticism has been written in America for a long time past. Merely by contrast

with the prevailing fashion, it should exert a healthy influence. Its culture, its wit, its personal confidences, not less than its freedom from critical shop talk and from conventions, give it a place by itself, far removed from the usual literary histories. And if it succeeds, as it should, in stimulating a taste for the Italian masterpieces, it will help forward a most desirable end. For it is hardly too much to say that we need just the qualities which those masterpieces abound in. Neither French literature nor German, precious though they both are, and indispensable for the common demands of scholarship, can supply us with the treasures peculiar to Italian literature.

Against a second edition, which we hope may be soon called for, we have noted a few slips: "Hippolito" (p. 62) and "Baptista" (p. 139) are neither Italian nor English forms, nor is "Marie de' Médicis' (p. 140) Italian or French; Recanati (p. 233) is not in the Bolognese district, but in the marches of Ancona. More is known of Bojardo, and he was more of a man, than we should infer from the slight reference to him on page 51. The statement (p. 244) that Carducci died last spring is happily incorrect.

BOOKS FOR MUSIC LOVERS.

Grove's Dictionary of Music and Musicians. Edited by J. A. Fuller Maitland. Vol. I. The Macmillan Co.

Wagner's Music-Dramas Analyzed. By Gustav Kobbé. G. Schirmer.

Modern Composers of Europe. By Arthur Elson. L. C. Page & Co.

Phases of Modern Music. By Lawrence Gilman. Harper & Bros.

Wagner Lyrics for Tenor; Wagner Lyrics for Soprano; Ten Hungarian Rhapsodies by Franz Liszt; Fifty Songs by Franz Schubert. 4 volumes. Oliver Ditson Co.

The Macmillan Co. are doing the musical world a great service by bringing out a new edition of Grove's admirable 'Dictionary of Music and Musicians,' carefully revised and brought up to date, under the editorship of Mr. Fuller Maitland. A quarter of a century has elapsed since the appearance of the first instalment of the original edition, and in that time many things calling for mention have happened. The editor's task has been made more difficult and important because of the disproportion in the amount of space allotted in the first volume of the original Grove as compared with the other volumes, due to the fact that at first only two were contemplated, whereas four resulted ultimately, not to speak of an appendix and an index. It cannot be said that the proper balance has yet been quite secured. Bach and Chopin exerted as great an influence on the musical world as Beethoven did, yet Bach has 14 columns, Chopin 11, and Beethoven 120! In the first edition Chopin had only 3 columns; the new article is by the same writer, and is admirable so far as it goes, although one wonders how so excellent a musician as Mr. Dannreuther could accept the preposterous notion that Chopin kept strict time with the left hand and confined his *tempo rubato* to the right hand. Berlioz's assertion that Chopin could not play in time if he tried would alone refute that alleged tradition. The article on Bach is still far from being adequate. As regards the length of the Beethoven article, the editor can plead that it was one of Grove's masterpieces, which it would have been a literary crime to shorten; he has, quite properly, actually enlarged it by inserting in brackets information that has been brought to light since Grove wrote this sketch, which ought, in truth, to be brought out in book form, as it remains to this day by far the best Life of Beethoven in the English language.

Mr. Maitland declares that within the last quarter-century many hundreds of names have reached an eminence which made their inclusion necessary, which is true; but why did he omit the name of one of the most prominent musicians in Germany to-day—that of Eugen D'Albert, one of the greatest living pianists, and the composer of eight operas and many other works? A strange oversight, surely. Apart from this, we have not noted anything to censure, and the new editor has evidently taken great pains to secure that accuracy in details which his predecessor was not always able to secure, from lack of erudition. The new edition also has what the first dispensed with, a number of excellent full-page portraits. Among the twenty in this first volume there is one of an American, G. W. Chadwick.

Mr. Kobbé's book on the later Wagner operas is a new edition of a treatise most useful to those who wish to study the anatomy and physiology, as well as the inner spirit, of the music-dramas. An excellent new feature is the alphabetical index to the leading motives in "Tristan," "Die Meistersinger," the four Nibelung operas, and "Parsifal."

Mr. Arthur Elson's latest contribution to literature is a volume of less than three hundred pages, giving an account of the most recent musical progress in the various European nations, with historical notes and critical and biographic sketches of the contemporary musical leaders in each country. Germany, Bohemia, France, Italy, the Netherlands, England, Scandinavia, and Russia in turn receive the attention of the author, whose information is abundant, and whose critical attitude is usually sane, though one smiles on finding him, too, overawed by the spectre of musical Jumboism and declaring that Richard Strauss is to-day "reckoned as the world's leading composer." And does Mr. Elson really believe that "of all the Slav composers Rimsky-Korsakoff is the most notable, the most charming in his music"? Haven't Tchaikovsky and Rubinstein reached Boston yet? In the pages on Grieg, Mr. Elson remarks that that Norwegian composer "has shown an almost endless flow of wonderful melodic invention." So he has, and does not that put him miles above Richard Strauss, who has no melodic invention worth mentioning? The picture of Grieg in this volume does not flatter him, but some of the other portraits, of which there are over thirty, are very good.

Like Mr. Elson, Mr. Gilman follows the fashion among journalist-authors of the day in giving the place of honor in his book to Richard Strauss, concerning whom he makes statements which he will himself smile at ten years hence. On the other hand, he shows sufficient keenness to perceive the unsubstantialness of the Elgar propaganda. The chapter "An American Tone Poet" gives a loving estimate of the works of the American, Edward MacDowell, who has more genius than a dozen Elgars and Strausses and Mascagnis rolled together. Mr. Gilman also pays a tribute of affection to Grieg, and another to Cornelius as a song-writer. These chapters are well worth reading, as are those on Verdi and Wagner, on Women and Modern Music, on "Parsifal" and its significance, while in another section the author, in trying to explain how Mascagni succeeded in creating a real music-drama where Wagner failed because his music is too superlatively grand and beautiful, comes perilously near being unintentionally funny; but, for this, probably, Newman and Huneker, who dote on paradox that causes talk, must be held responsible. The volume is dedicated to Philip Hale.

The admirable "Musicians' Library," published by the Oliver Ditson Company, already includes fourteen numbers. Among the latest issues are collections of Wagner lyrics, Liszt rhapsodies, and Schubert songs, edited respectively by Carl Armbruster, August Spanuth, and Henry T. Finck. The Wagner lyrics for soprano include eight songs written with pianoforte parts, and selections from the operas, from "Rienzi" to "Parsifal"; the volume for tenor—a voice specially favored by Wagner—includes twenty-eight excerpts from eleven operas and music dramas. In his preface Mr. Armbruster gives a sketch of Wagner's life, and dwells on the differences between that composer's operas and those of his predecessors. Mr. Spanuth's preface to the best ten of Liszt's rhapsodies is full of suggestive information; he understands what an astonishing amount of genius is embodied in these works, which have done for Hungarian music what Homer's epics did for the Greek myths:

> "Like the bard who moves his listeners first to tears through the recital of a sombre legend, and turns to a joyful story after having touched the heart, but binds both elements together with a latent string, so Liszt's rhapsodies are groups of fragments of heterogeneous modes, united through hundreds of secret relations. There is a symmetry of content and form in all of them which becomes more apparent as soon as a virtuoso ventures to distort it by omitting a section or interpolating a portion of one rhapsody into the other."

Numerous as are the editions of Schubert's songs, none is likely to do as much towards making the wonders of Schubert's genius apparent to amateurs as the one edited by Mr. Finck, for the reason that the others include many of Schubert's second-rate songs (especially those embraced in the three cycles), whereas this Ditson edition includes nothing but gems of the first water—the best fifty of 538 songs. As the editor remarks: "Had Schubert written only these fifty *Lieder*, he would still be the greatest of all song writers; and it may be said without hesitation that there is as much genius, and almost as much variety, in these 'Fifty Songs by Franz Schubert' as in the numbers of the volume of 'Fifty Mastersongs by Twenty Composers' included in this series."

Reminiscences of Peace and War. By Mrs. Roger A. Pryor. The Macmillan Co. 1904. 8vo, pp. xv., 402.

Among memoirs simple and contributory (*mémoires pour servir*) Mrs. Pryor's recollections are incidentally of the latter class. The wife of a quondam editorial writer in

Richmond and in Washington, a firebrand secessionist Representative, a Confederate military officer, a Federal prisoner, and for many years a judge in this city, Mrs. Pryor has written a vivid and picturesque account of what she saw, heard, and lived between 1852 and 1866, in different places and under conditions almost constantly changing, and, immediately after 1861, going from bad to worse. About one-fourth of the volume is descriptive of social and political life in Washington during a few years prior to the outbreak of the civil war. In those days Southerners ruled Washington society, not, as has often been assumed, because they were naturally superior socially, but because the capital had no charms for Northerners of leisure; it was a Southern and slave-service city, and yet it was so great an improvement upon any city farther South, except New Orleans, that it perfectly served the planters and politicians as a social metropolis in winter. Even in summer it was a more bearable residence than any plantation in the Cotton States. Considering a large number of servants the chief of luxuries, Southerners brought slaves with them and thoroughly enjoyed the rather plain living and entertainments of that time. They possessed strong social tastes and abilities, and soon felt thoroughly at home in circles that had enough foreign and political coloring to excite their imagination and give much pleasure, which was always described in superlatives. Mrs. Pryor offers us the rare opportunity to learn what impression the ante-bellum Vanity Fair of Washington made upon a girlish and talented wife from a small Virginia city. Her accounts of the absurd styles, the beauties, the social leaders and social customs are thoroughly entertaining.

Of course, it is a serious, but unintentional, misrepresentation to say that Buchanan was so excited about secession, and withal so weak-minded, that "if one chanced to stand silently near him in a quiet corner, he might be heard to mutter, 'Not in my time—not in my time'" (p. 101). It is one thing for him to have had the thought and even to have often expressed it; but that he muttered it six or eight months before South Carolina seceded and when he had a company on the White House veranda to listen to an open-air concert by the Marine Band, is too much to believe on the evidence. Much truer to life, we trust, is the picture of R. M. T. Hunter, Garnett, Porcher Miles, Lamar, Boyce, Barksdale, Keitt, and Pryor holding all-night conferences in Pryor's library and drinking whiskey toddies till the break of day. It was said of the Southerners, a decade earlier, that they talked treason as they took their daily meals. Now they organized secession as they drank hot whiskeys, and we do not wonder that "the dawn would find them again and again with but one conclusion—they would stand together." And they did—later.

We hope that neither fact nor fancy will ever destroy the choice anecdote about the Russian minister, Baron Stöckle. Like a well-trained diplomat, he knew that he should express no opinions about American politics. At one of his genial dinners a lady, who was certainly not lacking in social valor or inquisitiveness, undertook, in this wise, to make him commit himself: "Come now, Baron! Here we are, Republicans and Democrats! Show your colors! Where do you belong?" "Alas, dear lady, I am an orphan! I belong nowhere! I am an *Old-line Whig*" (p. 61). There are others almost as good. When old Dudley Mann—whom a lady subsequently pronounced more of a success as a gallant than as a diplomat—was cautioned by his too thoughtful partner at a levee to be careful not to step on the long trains, he answered: "My child, I haven't lifted my feet for twenty years!"

It is doubtful if any wholly civilized modern people ever more generally suffered the penalty of defeat than the Confederates did. There may have been more than a shadow of truth in Botts's declaration about a rich man's war and a poor man's fight; but in the end there was a pure democracy of total wreck. It is all but literally true to say that every one lost everything. Many persons lost everything before this high tragedy had passed out of the period of buoyant confidence. It was Mrs. Pryor's fortune to see nearly all phases of life during the four years. At first she was on a Virginia tobacco plantation. Later she was either near the army or was in a Richmond hospital. For the last eighteen months of the war she was in or near Petersburg, much of the time in siege and famine. During the final winter and early spring she was in a country house very close to Lee's headquarters. In many respects she thought and acted like a typical Southern woman, full of sentiment, feminine illogic, and thoroughly noble sympathies as well as heroic perseverance. Others had better opportunities to describe life in Richmond, but her recollections of social and military conditions in Petersburg and of the shifts that she made there to keep from starving, are ample for the purpose. Her story of how, when the wolf was not at the door, but at the fireplace, as she says, she chanced to come across a trunk of out-of-date and laid-aside finery worn in Washington and of the sum she made out of it—by her wits and industry—reads like a tale of magic. Yet there is no question about the main facts, although they may have been somewhat colored by time.

The superiority of contemporary evidence to any reminiscence is picturesquely illustrated by a series of letters which Mrs. Pryor received from a friend in Richmond, and which she now publishes. Because the writer is still living, her identity is concealed behind the name of Agnes. The letters contain several rare gems. Here is one that is matchless: Agnes usually took an early morning walk in the Capitol Square if she had had a very restless night. She was sitting on a bench there before breakfast on the morning of the day to be made famous by the pathetic Bread Riot. From a crowd of several hundred women and boys, "a pale, emaciated girl, not more than eighteen, with a sunbonnet on her head, and dressed in a clean calico gown," came and sat down beside her, remarking as she did so, "I could stand it no longer." She was evidently a dressmaker's apprentice; she had delicate features, large eyes, and had probably been pretty:

"As she raised her hand to remove her sunbonnet and use it for a fan, her loose calico sleeve slipped up, and revealed the mere skeleton of an arm. She perceived my expression as I looked at it, and hastily pulled down her sleeve with a short laugh. 'This is all that's left of me!' she said. 'It seems real funny, don't it?' . . . I was encouraged to ask. 'What is it? Is there some celebration?' 'There *is*,' said the girl, solemnly; 'we celebrate our right to live. We are starving. As soon as enough of us get together, we are going to the bakeries and each of us will take a loaf of bread. That is little enough for the Government to give us after it has taken all our men.'

"Just then a fat old black Mammy waddled up the walk to overtake a beautiful child who was running before her. 'Come dis a way, honey,' she called; 'don't go nigh dem people,' adding, in a lower tone, 'I's feared you'll ketch somethin' fum dem po'-white folks. I *wonder* dey let's 'em into de Park.'

"The girl turned to me with a wan smile, and as she rose to join the long line that had now formed and was moving, she said simply, 'Good-by! I'm going to get something to eat!'"

The "Bread Riot" had begun.

We like the volume as a whole for what it makes one see and feel. It cannot be called a great book, but it is thoroughly entertaining and profitable reading. And the reader, after many a hearty laugh, and now and then a tear, and considerable instruction as to what Southern natures and ideas were like, will find himself richer in humor and in sympathy than he was before.

William Ward, A.R.A., and James Ward, R.A.: Their Lives and Works. By Julia Frankau. With thirty photogravures. Pp. xi., 333. Folio of 40 Prints 18x24½ in mezzotint and stipple. Macmillan Co. 1904.

This handsome large octavo volume and sumptuous folio of prints give an account of the lives and illustrate the works of two English artists of the latter part of the eighteenth and the beginning of the nineteenth centuries. The artistic productions of these men interestingly reflect the æsthetic conditions of their time, and afford illustration of the character of the fine arts as then practised by men of no high order of genius or artistic culture, though of considerable technical skill, especially in mezzotint engraving, a process which was highly developed in the eighteenth century. The brothers James and William Ward were what are called self-made men, who from humble origin rose to considerable eminence in popular esteem, both becoming members of the Royal Academy, and James an Academician and Painter and Engraver to H. R. H. the Prince of Wales. The story of these lives is sufficiently told in the 72 pages devoted to them, and the remainder of the volume consists of a descriptive catalogue of works engraved by them, a list of their original paintings exhibited at different times in the Royal Academy and elsewhere, and indices of their engravings after the works of various other English artists.

James practised painting more extensively than his brother, and in early life became very successful as a painter of animals and *genre* subjects, under the inspiration of George Moreland, his brother-in-law. He also found extensive patronage in portraiture of high-bred animals, in which he rivalled in commissions from the nobility and gentry the most fashionable portraitists of the human subject. But at the age of fifty he made a wide departure from the path that he had hitherto followed, and thereafter labored in a different direction for which he was not so well qualified. The British Institute, we are told (p. 40), had offered a prize of a thousand guineas for a painting treating alle-

gorically the triumph of the Duke of Wellington. This fired James Ward's ambition to appear in the rôle of a great imaginative designer. In the notions which now possessed him we see the influence of that artificial academic teaching which prevailed at the time, and gave rise to the pedantic and bombastic art of Fuseli and Haydon. His own diffuse and vainglorious description of the work which he proposed to execute for this competition begins as follows: "The genius of Wellington, (1) on the *Car of War*, supported by Britannia, (2) and Attended by the Cardinal Virtues, Commanding away the Three Demons, Anarchy, (3) Rebellion, (4) and Discord, (5) with the horrors of War." He won the prize, but the work did not do him credit nor give him fame. His inordinate vanity was not abated by the lack of success with the public on this line of endeavor. He felt himself an injured man, and maintained this attitude to the end of his long life. The thirty photogravures of the book illustrate paintings by him that are said to have been never before engraved. The best of these are the least pretentious, as Plate V., "Calves"; Plate XI., "The Straw Yard," and Plate XXVI., "The Gravel Pit."

As an engraver, James Ward began his career early, entering the studio of Raphael Smith, the famous mezzotint engraver, at the age of twelve. But somewhat later he left this studio and became a pupil of his elder brother, William, who had before been taught by Smith. In the year 1799 the brothers formed a partnership as engravers, and engraved many works, in mezzotint and stipple, of the fashionable painters of their time—Reynolds, Gainsborough, Hoppner and others. The forty prints in the portfolio illustrate a selection from these. They appear not to be impressions from the original plates, save in one instance marked "Original Mezzotint," but hand-wrought copies by engravers whose names are not given. The stipples are printed in colors, and the whole series affords a good illustration of the English society life in the time of Jane Austen, as well as of the fashionable, and less important, art of the period.

The general make-up of the work is excellent: clear type and broad margins for the text, and for both text and plates special hand-made paper reproducing both the texture and the color of that which was used in the eighteenth century. The edition is limited to 350 copies, of which 50 copies are for America.

Oxford and its Story. By Cecil Headlam. With Illustrations by Herbert Railton. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. 1904.

Oxford University, like Cambridge, delighted to veil its origin in the mists of a fabulous antiquity. Greek philosophers, it was said, chose Oxford as a suitable place of habitation, and in the same breath the champions of the University claimed Alfred the Great as their founder. They were incited to defend their antiquity by the boast of a Cambridge orator who, when Queen Elizabeth visited Cambridge, declared that Oxford had borrowed from Cambridge her most learned men, and that Paris and Cologne also were derived from the East Anglian University. As a matter of fact, however, Oxford is somewhat older than Cambridge, but, even so, the beginnings of her schools cannot be dated earlier than the second half of the twelfth century. Towards the end of the eleventh century Europe began to recover from the degradation of the Dark Ages. Guilds of study, managed like trade guilds, sprang up, and in them is to be sought the original idea of a university. The school of philosophy at Paris was the centre of the enthusiasm of the twelfth-century Renaissance, and to Paris went many Englishmen in quest of the higher education. Henry II. recalled all English scholars from France in 1165, when he quarrelled with the French King, and that exodus from Paris drew many scholars to Oxford, where Henry had his palace. Oxford was already a wealthy and important town, commanding the great commercial thoroughfare of the Thames. Within a few years her schools had become famous, and when in 1187 Giraldus Cambrensis, a Welshman, wished to advertise his book on Ireland, he tells us that he resolved to read it before "a vast audience at Oxford, where the clergy in England chiefly flourished and excelled in clerkly lore." A little later, in the reign of John, when Oxford had an academic population of three thousand, the University became engaged in its first serious quarrel with the town authorities. The scholars migrated, and would not return until the citizens performed public penance for their oppression of the students, and the Papal legate, Pandulf, decreed that, in future, university students should be independent of lay jurisdiction. Paris was the model of all the universities of that time, and in 1246 the Pope declared that nobody must teach at Oxford who had not "qualified according to the custom of the Parisians." This account of the foundation of the University, which Mr. Headlam accepts, is, of course, wholly opposed to that which makes its origin local and ecclesiastical.

Oxford was from the first constantly embroiled in the politics of the kingdom, more deeply involved in civil struggles than Cambridge, more under the eye of English kings and queens. Always on the royalist side, she was more than once chosen as the seat of government. There can have been little chance for the academic life in the seventeenth century when the city swarmed with soldiers and courtiers, and the King and Queen were lodged in the Colleges of Merton and Christchurch. It was not, in fact, till after the Restoration, which she greeted with enthusiasm, that the University ceased to suffer from the upheavals inevitable to her conspicuous part in the political life of the country. She saw

"The Captains and the Kings depart"

at last, and, except for certain Jacobite disturbances, the eighteenth-century Fellows were left in peace to enjoy their privileges and to exchange epigrams with Cambridge. During the reign of George I., Oxford, faithful as ever to a lost cause, made a demonstration on a royal birthday and was overawed by a troop of horse dispatched by the King. About the same time the Crown had presented Cambridge with a fine library. This inspired the first Oxford Professor of Poetry to write the famous epigram:

"The King, observing with judicious eyes
The wants of his two Universities,
To Oxford sent a troop of horse; and why?
That learnèd body wanted loyalty.
To Cambridge books he sent, as well discerning
How much that loyal body wanted learning."

To which Sir Thomas Browne retorted from Cambridge:

"The King to Oxford sent a troop of horse,
For Tories own no argument but force;
With equal care to Cambridge books he sent,
For Whigs admit no force but argument."

Mr. Headlam has interwoven the story of the foundation of the several colleges with the general account of the rôle of Oxford in politics. Merton and University are the oldest foundations; Wolsey founded the greatest of all, Cardinal's College, which after his fall was to be renamed Christchurch, and known to all Oxonians as "the House." Trinity and St. John's are memorials of the Catholic reaction of the sixteenth century; Jesus, founded in Elizabeth's reign, was the first Protestant College, was endowed by a Welshman, and was always regarded by the Welsh as their National College. It was Leicester in the same reign who, designing to exclude for ever the influence of Rome, introduced a religious test which narrowed the University into a Church of England institution, and gave it that peculiarly Anglican character in virtue of which Oxford and Cambridge stand alone among the universities of Europe. The fashion that has made of Oxford a city of "dreaming spires" was first set by William of Wykeham, who built New College chapel. After that there was for a time a sort of mania for adding pinnacles to any College building or church that would receive them. Mr. Headlam's account of the growth of the University deals very thoroughly with the architecture, the religious controversies, the political embroilments—with the Oxford, in short, of the historian and antiquary. The development of her studies is, in comparison, somewhat neglected. Nor does Mr. Headlam do justice to the Oxford of the nineteenth century; his interest seems to end with "Jacobite Oxford," and he is content to sum up in a little over two pages all that has made Oxford a centre of English thought ever since she ceased to be a camp or to entertain a court. The whole Oxford Movement is dismissed in three sentences. This is to give an effect of lack of proportion to an admirable piece of work.

The illustrations, by Mr. Herbert Railton, are charming, and are beautifully reproduced; they are more successful, because more easily recognizable, than his drawings for the companion volume, 'Cambridge,' recently noticed in our columns. The index is hardly full enough for a work of this sort, and there are strange omissions, as for instance the important college of Trinity. On page 354 Mr. Headlam speaks of "Dumas, the prince of highwaymen," and alludes to the famous tale of the lady who redeemed her luggage by dancing a coranto on the green. *Dumas* in this case is apparently a misprint (which is repeated in the index) for *Duval*. In his 'Cambridge,' Dean Stubbs did not so much as mention the Women's Colleges. Mr. Headlam has at least referred, in a footnote, to their existence at Oxford.

Japan: An Attempt at Interpretation. By Lafcadio Hearn. The Macmillan Co. 1904.

The "attempt at interpretation" made here by the late Mr. Hearn was to trace the political and moral life of the Japanese people to their religion, and that, too, in its restricted sense of ancestor-worship.

As every student of either ethnology or comparative religion knows, there has been, from first to last of human progress, an interaction between all human culturals, namely, between industry, knowledge, art, conduct, and religion, just because all are but varying functions of one unitary mind. Mr. Hearn has made an intimate and powerful contribution to such interaction between conduct (politics and morality) and religion, but has traced the interaction only one way—from, and not to, the religion; so that an unwary reader might be misled into supposing that in Japan religion was the primal and commanding human function. Here, as elsewhere, however, morality arose and constantly stands upon its own basis in man's nature, though often reinforced by religious conceptions. Mr. Hearn sometimes writes from this correct view of the coördination of morals and religion, as on page 511: "Certainly her [Japan's] power to accomplish what she has accomplished was derived from her old religious *and* social training." And again, on page 177: "So the conduct compelled through many generations by religious *and* civil authority tends eventually to become almost instinctive." (The italics are our own.) But on other occasions, as well as by the whole spirit and structure of the work, Mr. Hearn claims determinative influence for religion. Thus, at page 57, the Japanese Hirata is quoted to the effect that "Devotion to the memory of ancestors is the mainspring of all virtue," when Mr. Hearn continues: "From the sociologist's point of view, Hirata is right; it is unquestionably true that the whole system of Far Eastern ethics derives from the religion of the household. By aid of that cult have been evolved all ideas of duty to the living as well as to the dead—the sentiment of reverence, the sentiment of loyalty, the spirit of self-sacrifice, and the spirit of patriotism." But Hirata was apologist for the reviving Shintoism of the early nineteenth century against Buddhism, just as Mr. Hearn is now of the moribund Shintoism against Christianity.

Indeed, the whole work may fairly be regarded as a *Tendenzschrift* with the abovenamed object in view, as the author discloses on his last page but one:

"Perhaps this book, in spite of many shortcomings, will not fail to convince some thoughtful persons that the constitution of Far Eastern society presents insuperable obstacles to the propaganda of Western religion as hitherto conducted; that these obstacles now demand, more than at any previous epoch, the most careful and humane consideration; and that the further needless maintenance of an uncompromising attitude towards them can result in nothing but evil."

Not only Western religion, however, but Western competitive industrialism, is working against Far Eastern social structure; for all Western institutions are now individualistic, whereas all Eastern ones are communalistic, between which systems there can be no peace, though some system which shall "sublate" or synthetize the two may prove attainable to man.

An unequivocal case of this disposition to refer the foundation of everything admirable to religion occurs on page 162: "The Japanese love of cleanliness—indicated by the universal practice of daily bathing and by the irreproachable condition of their homes—has been maintained and was probably originated by their religion." The curious reader might inquire why one should attribute this unique effect to so general a cause as religion. An analogous error was perpetrated by Mr. B. H. Chamberlain in his 'Things Japanese,' as follows: "The Japanese passion for bathing leads all classes to make extensive use of the hot mineral springs in which this volcano-studded land abounds." Here the cart before the horse is pretty clear, and it seems much saner to attribute love of bathing to nature's provision of baths, for were not the baths on the ground first, and do not the Japanese heat the water of their artificial baths to an extreme of about 110 degrees Fahrenheit, which no other people can tolerate, in order to secure not only the cleansing, but the warmth—well-nigh necessary in the winter without warmed houses—that these natural baths afford? Besides, why did not this "passion for bathing" or this "religion" lead the Japanese to use their rivers and bays for bathing? It did not, and Japanese learned from foreigners such benefit as these offer; and in summer the rivers are muddy, while the sea is cold nine months in the year.

The second leading error of Mr. Hearn is to derive all religion from ancestorism, and practically to reduce all religion to it. Plain cases of the claim for derivation occur at pages 36, 38, 65, and 121. The text at page 65 reads: "Even where Japanese ancestor-worship evolved a mythology, its gods were only transfigured ghosts—and this is the history of all mythology." The last clause is inspired by Mr. Herbert Spencer, who is repeatedly quoted throughout the work, and is the only writer on the science of religion that is quoted. Shintoism, the ethnic faith of the Japanese, bears evidence to the *fusion* of naturism with animism, indeed, but none at all to the derivation of either one from the other; and Mr. Hearn was discreet enough to skip what Spencer attempted in vain to show, just how, when, and where the ghosts were "transfigured" into nature-gods. The gaps in the passage on pages 121-123 are obvious enough to a reader who seeks light on this problem. But to Mr. Hearn "ancestor-worship is the real religion of Japan," in spite of the commanding influence exercised upon the daily life of the nation by such deities as Amaterasu (sun), Susano (rain-storm), and Daikoku (moon).

Despite the special pleading of the book, its mass of details on the religious and moral life gleaned by Mr. Hearn through long years of intimate and sympathetic acquaintance with the Japanese, will prove invaluable to the student of religion or sociology, and interesting reading to all who love men or care for mental travel. Here, as one would expect from the author, the practices which discredit Japanese life are either omitted or are buried in footnotes. Perhaps, however, we already knew these well enough, and certainly we needed more to learn the good traits which are easily overlooked in us all.

The Divine Comedy of Dante: The Inferno. A Translation and Commentary by Marvin R. Vincent. Charles Scribner's Sons.

It is an ungrateful task to disparage a book made with love and earnest purpose by a careful scholar, even though the product seem to be of doubtful utility. Such a work is Professor Vincent's translation of the "Inferno"—to be followed shortly by the "Purgatorio." Dr. Vincent has turned Dante's poem into blank verse, rendering it with ingenious literalness and, as far as possible, line for line. He says in his preface:

"I have made a literal translation, and have not attempted to produce a smooth and elegant English poem; such an attempt will inevitably land any translator in florid paraphrase. . . . At the very best, translation is 'disenchantment.' . . . Literal translation will confront its readers with not a few novel, startling, and occasionally disagreeable forms of expression. For these Dante and not his translator must be held responsible."

Whether this last statement is quite just to the Italian poet, the reader may judge by comparing the following version with the familiar lines of the original:

"For pastime, we, one day,
Were reading about Launcelot, how Love
Enthralled him. All alone we were, and naught
Suspecting. Oft our eyes that reading urged
To meet, and drove the color from each face.
But that which overcame us was one place
Alone. When, how the smile that woke desire
Was kissed by lover such as he, we read,
This one who never shall be parted from me,
All trembling, kissed my mouth. Galeotto was
The book, and he that wrote it. We, that day,
No further read therein."

As may be seen from this specimen, Dr. Vincent's verse is devoid of poetic beauty: it is harsh, unrhythmical, bald in expression, and full of clumsy, needless transpositions, which often obscure the sense. It is safe to say that nobody, without reference to the Italian, could understand the clause

"When, how the smile that woke desire
Was killed by lover such as he, we read,"

which in the original, be it noted, contains no inversion. On the other hand, it should in justice be stated that Dr. Vincent's rendering is almost uniformly accurate.

The author explains as follows the publication of his volume: "The last quarter of a century has witnessed such a notable revival of interest in Dante, and so many valuable contributions to Dante literature, that I have been led to believe that there is room for a new Translation and Commentary, in the light of these later contributions." Now, there are two classes of readers who might conceivably profit by such a book: first, those who wish to study the original with the help of a "pony"; second, those who, being ignorant of Italian, desire to read the famous poem in English. For the first class, the present work comes into competition with Professor Norton's prose translation, which, in its new edition, is quite a match for it in up-to-date scholarship. The only advantage offered by the new version is the division into short lines, which makes it easier to keep one's place; and this external merit is abundantly outweighed by the greater literalness of Professor Norton's prose, not to mention the fascination of his stately, poetic diction. For those readers, on the other hand, who are to derive from a translation their first and perhaps their only impression of the 'Commedia,' minute exactness is less important than clearness and literary grace; and in these respects Dr. Vincent's attempt is inferior to several earlier efforts. Dean Plumptre's version, for instance, while modern enough and sufficiently faithful, conveys some of the charm of the Italian.

A concise introduction to Dr. Vincent's work contains the information indispensable

to an understanding of Dante's world. The copious notes, which follow the text, afford all necessary help for the literal interpretation of the poem. A few inaccuracies may be noted, although they are of little significance to the general reader. Dr. Vincent makes, for instance, the common mistake of confounding the northern hemisphere with the hemisphere of land. One would gather, also, from his statement, that the situation of Purgatory in the middle of the ocean was a part of the Ptolemaic system. The sphere of fire is said to begin at the entrance of Purgatory proper, an opinion not generally accepted and apparently irreconcilable with Dante's description of Eden. Dante nowhere in the 'Commedia' says that at the fall of Lucifer "the earth fled away . . . northward, forming the pit of hell"; he speaks only of the flight in the opposite direction, and so the inconsistency found by Dr. Vincent disappears. The etymological information, "*oc* is *hoc est, oil* is *hoc illud est*," seems, to say the least, unfortunately phrased. "Albertus Magnus, Aquinas, and Bonaventura" were "contemporary with Dante" only in the sense that they died after his birth. It is hard to see just what the author means by denying that the Empire is a temporal agent, and declaring that it is "a spiritual agency no less than the Church"; Dante tells us that the object of the Empire is the "beatitudo *hujus* vitæ." Of the 'Commedia' we are told: "In a literal sense it is Dante's own spiritual biography; in another sense it is the spiritual biography of man as man"—a definition quite at variance with the almost equally unsatisfactory statement in the Letter to Can Grande, which work the author himself repeatedly mentions, always referring to it, by the way, as if it were unquestionably Dante's own.

These blemishes amount to nothing in comparison with the general trustworthiness of the annotation. There is, however, one fundamental defect in the whole exposition: the commentary is devoted almost exclusively to the letter, and grants to "the things signified through the letter" only the most fleeting and perfunctory recognition. For example, nearly a full page (p. 257) of fine print is given up to the discussion of an unimportant geographical detail, while the much debated *tre fiere*, in which many scholars now see a clue to the entire symbolism of the "Inferno," are dismissed with a scant eight lines of the most antiquated comment. What would Dante have thought of an interpretation that concerned itself only with the literal sense, or "fiction," neglecting the "sposizione allegorica e *vera*"?

The Luxury of Children, and Some Other Luxuries. By Edward Sandford Martin. Harper & Bros. 1904.

In this slight but very entertaining book Mr. Martin touches the question of "race suicide" with a lighter hand than is usually brought to bear on that overworked topic. We have been told that there was a time in the history of Arabia when any daughters who threatened to be superfluous were put out of the way to save the family pride, which might one day have to face a misalliance. It is from some such solicitude, says Mr. Martin, that American families tend to be too small. "Solicitude for posterity has gone too far when existence has been denied to a possible citizen for fear he may never own a steam yacht." If only Americans would realize that children are luxuries, they would never be so self-denying. They would take pride in a collection of children, just as they now take pride in their pictures and tapestries, and there is really more fun to be got out of luxuries that are alive than out of objects of art whose end is an auction. Every one on the lookout for an intelligent investment should put his money into children; they are gilt-edged securities.

This point of view is one that Mr. Roosevelt has overlooked, but it is probably more convincing than solemn exhortations to do one's duty by the race. If we adopt it we shall never again allude to Jenkins as "a poor man with a large family," or to Jones as a "rich man with one daughter," "as though a man with much money and only one daughter could justly be called rich." If excitement is what you are after, is there any excitement so constant and yet so little liable to pall as that provided by one's family? And yet, says Mr. Martin, with mingled pity and scorn, there are people who think it a luxury to own a victoria in which they may drive in the park, and would regard a schoolboy as an object of expense. There is no stimulant like the possession of children. They incite you to work, they fire you to rub up your rusty Greek and Latin; their table-talk, as they pass through the various stages of education, educates you over again, and keeps you abreast of new studies and new methods. "Greatly important and greatly remunerative," concludes Mr. Martin, "is this business of raising and training children and being trained in turn by them. It comes very near being the best worth-while thing there is."

Nine of the fourteen short essays in the volume are devoted to the praise of children. In "The Pinch of Comfort" we are introduced to Cattlett, to whom a lady of high fashion said, speaking for her group, "You know, Mr. Cattlett, it's only a question of time when we shall be looted." This interesting thought inspired Mr. Cattlett to keep an eye on the best things. "When there is an art sale he watches the papers to see where the best things go. When there is a loan exhibition, he notices where the best things come from." When Newport is really sacked, Mr. Cattlett will be there with a catalogue. Mr. Martin's genial philosophy and ingenious style fit him for the lighter kind of essay, and the volume before us is a very agreeable whole. The illustrations by Miss Sarah Stilwell include several full-page colored plates, while every page has on its margin a study of children reproduced in colors.

The Life and Work of E. J. Peck among the Eskimos. By the Rev. Arthur Lewis. New York: A. C. Armstrong & Son. 1904. 8vo, pp. xvi., 350. Portrait and illustrations.

Mr. Peck was an able seaman in her Majesty's navy, who became converted and volunteered for missionary service among the Eskimo of northeastern British America, was ordained, and has since spent his life in the vicinity of Hudson Bay, Labrador, and Cumberland Sound trading posts or whaling stations, endeavoring to "bring to Jesus" the unsophisticated children of the North. He seems to be a good and earnest man, but unfortunate in his biographer.

The book opens, not with an account of Mr. Peck's ideas of Eskimo ethnology—which, however crude and mistaken, would have had a certain interest—but with an uncomprehending compilation from sundry very good authorities on Eskimo life, a sort of intellectual crazy-quilt. It proceeds by telling of Mr. Peck's journeys and their discomforts, where he went, and how he was housed—nothing of his methods of teaching or what he taught, though the general dreariness is lighted up by one or two anecdotes; as of the Eskimo woman who was indignant with the new religion because, by Mr. Peck's account of it, a woman was represented as being the cause of all the subsequent spiritual miseries of mankind—to wit, Mother Eve. Another, who doubted the superiority of Christianity, pointed out to the mortified evangelist as the only Christians he knew, the drunken sailors and debauched traders of the little settlement, and, very naturally, doubted whether he would gain morally by an exchange.

Mr. Peck's labors have doubtless borne some good fruit, not on account of his eighteenth-century theology, but because he is a loving, earnest, and devoted, though ignorant, man. Even the crass incompetence of his biographer cannot hide that from us. But any understanding of the man, his mission, or his successes and failures, to be gained from this book, must be sought between the lines.

A Few of Henry Holt and Company's Recent Books.

(PUBLISHED AT 29 WEST 23D STREET, NEW YORK)

THE NIBELUNGENLIED. Translated by George Henry Needler. $1.75 net (by mail $1.87).

A translation into rhymed English verse in the metrical scheme of the original.

Prof. H. C. G. Brandt, Hamilton College, Clinton, N. Y.: "It is the best English translation, without question. The translator shows his good judgment when he retains the original strope, the characteristic last half-verse with its four ictus included. That a Germanist could write an introduction of only 36 pages to such a much-discussed epic will be a marvel to his fellows. But it contains all the general reader wants and needs to know."

Wilson's (Ella Calista) PEDAGOGUES AND PARENTS. $1.25 net (by mail, $1.37).

An informal and often humorous book, from the parents' standpoint, which discusses schools and education, actual and ideal, and some of the older educational classics.

Von Schierbrand's AMERICA, ASIA AND THE PACIFIC. $1.50 net (by mail $1.62).

A careful yet popular consideration of our present and future prospects as a world power.

"A fascinating book."—*N. Y. Times Review.* "An interesting survey of a broad field."—*Outlook.*

Fielding's TOM JONES. Edited by Burton E. Stevenson. $1.50.

The elisions have been of connected passages, not of words from sentences; therefore what remains is exactly as Fielding wrote it.

*****Boswell's Johnson**. Condensed. *6th Printing.* $1.50. **Clarissa Harlow**, Condensed. *11th Printing.* $1.50.

Sinclair's THE DIVINE FIRE. $1.50.

The story of a London poet, unfortunately born, and of his very varied acquaintances.

"It ought to give May Sinclair at once high rank among the novelists of the day. . . . We venture to count the hero already among the memorable figures in romance. . . . A novel which it is a pleasure to praise."—*N. Y. Tribune.*

Winthrop's (Theodore) Mr. WADDY'S RETURN. Ed. by B. E. Stevenson. $1.50.

The experiences of Mr. Waddy on his return from India to Ante-Bellum Boston and Newport.

"A gay, fun-loving, crisp manner, a sound, sensible romanticism, a natural fineness. . . . the old charm of Winthrop."—*Nation.*

Stevenson's (Burton E.) MARATHON MYSTERY. $1.50.

By the author of "*The Holladay Case.*" With scenes in color by Eliot Keen.

"Its chief merit is in the plausibility of its plot and the excellence of its style, Mr. Stevenson apparently knowing well the dramatic effect of fluency and brevity, and the rationality of avoiding false clues and attempts unduly to mystify his readers."—*Boston Transcript.*

Williamson's (C. N. and A. M.) LIGHTNING CONDUCTOR. $1.50.

This automobile love story, with its vivid scenes in France, Spain and Italy, is still one of the most popular on the publishers' list. *The Nation* reviewed it enthusiastically, speaking of its "*charming people*" and "*charming scenes.*"

Three Generations of Fascinating Women

AND OTHER SKETCHES FROM FAMILY HISTORY. By Lady RUSSELL, Author of "Swallowfield," etc. 360 pages. 66 Collotype Plates. Crown 4to. $10.50 net. Postage additional.

LONGMANS, GREEN & CO., New York

Two volumes, $6.50 net.

ECONOMIC INQUIRIES AND STUDIES

By Sir ROBERT GIFFEN, K.C.B.

"Taken together they present the most complete interpretation of sound principles of international trade yet given. Every large issue of recent fiscal controversy finds lucid and comprehensive treatment in an atmosphere far removed from the heat of partisan debate." —*Manchester Guardian.*

"It is hard to over-estimate the educational and the directly practical utility of the large and minute labor represented here." —*Westminster Gazette.*

THE MACMILLAN COMPANY, 66 5th Ave., N.Y.

DODD, MEAD & COMPANY

THE BOOKMAN *THE NEW INTERNATIONAL ENCYCLOPÆDIA*

Publishers, 372 Fifth Avenue, New York

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps, $5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

The Nation

VOL. LXXIX—NO. 2059. THURSDAY, DECEMBER 15, 1904. PRICE TEN CENTS.

THE BEST OF MODERN LITERATURE

"The most valuable biography of the season."—*The Dial, Chicago.*

MONCURE D. CONWAY'S REMINISCENCES

"It would be difficult to name any other biography which contains so extraordinary a list of so prominent literary or scientific names in England or in America. It is safe to say that for personal anecdotes the book is unequalled, and that neither Boswell's Johnson nor Lockhart's Scott contains so many separate entries. It is also true that Mr. Conway's perceptions are so keen and his literary handling at once so graphic and so well trained that there is not a dull page in the book."—*The Nation, New York.*

Illustrated with a large number of interesting portraits and views. In two volumes, 8vo, gilt top, $6.00 net. Postpaid, $6.43.

COMPROMISES

By Agnes Repplier

"These essays are all graceful, light of touch, full of humor and wisdom; and they are, in the better sense, literature."—*New York Times.* $1.10 *net.* Postage 11 cents.

FAR AND NEAR

By John Burroughs

"These observations of wild life around his cabin show that the dean of American naturalists is still in prime condition for observation."—*Boston Transcript.* $1.10 *net.* Postage 11 cents.

BITS OF GOSSIP

By Rebecca Harding Davis

"Mrs. Davis has given us, in these human reminiscences, a little book that is sane and wise and cheerful, as well as entertaining."—*The Dial, Chicago.* $1.25 *net.* Postage 10 cents.

BIOGRAPHIES BY JOHN WHITE CHADWICK

WILLIAM ELLERY CHANNING

"Mr. Chadwick has told the story of Dr. Channing's life in a delightful manner. He has rightly estimated Channing's religious position, stated it justly and with no sectarian claims for it."—*New York Times.* With portraits, $1.75 *net.* Postage, 13 cents.

THEODORE PARKER

"His book is written with the alluring diction and other fascinations of Mr. Chadwick's well-known style. He knows how to throw the lights on the right points, and the story contains vital pictures of the man."—*The Independent.* With photogravure portraits, $2.00.

THE AFFAIR AT THE INN

By Kate Douglas Wiggin and others.

"It is actual comedy of the most artistic sort and is handled with a freshness and originality that is unquestionably novel."—*Boston Transcript.* Illustrated. $1.25.

ROUTINE AND IDEALS

By LeBaron R. Briggs

"The best thing education can do is to make moral character efficient through mental discipline, a theme Dean Briggs keeps in view throughout his book."—*Boston Advertiser.* $1.00 *net.* Postage 9 cents.

JUDITH OF BETHULIA

By Thomas Bailey Aldrich

"It is one of the most important contributions to the American Theatre made in a generation."—*New York Eve. Post.* With portrait of Miss Nance O'Neil in the character of Judith. $1.00 *net.* Postage 8 cents.

RUSKIN'S LETTERS TO CHARLES ELIOT NORTON

A man's letters to his closest friend would often make his best biography. Such is the case with these letters from John Ruskin to Charles Eliot Norton. They are, in fact, a sort of autobiography; for they are the most familiar and self-revelatory of Ruskin's letters hitherto printed. In them he discloses his intimate moods, his inner purposes, his hopes and fears, his doubts and ambitions.

"These volumes are one of the year's important productions. They are edited with literary skill, modesty, insight and sympathy. The letters themselves constitute a rare and intimate revelation of a great and generous soul. The volumes contain several good portraits and some facsimiles of Ruskin's letters and drawings."—*Chicago Record-Herald.*

Two volumes, with many portraits, $4.00 net. Postage 26 cents.

MEMOIRS OF HENRY VILLARD

Journalist and Financier

"The integrity of this book is notable. In it will be found the story of great times and of great men and of great events. Mr. Villard's account of Sherman and of Bismarck alone would give to his memoirs a value for historians that could not be exaggerated. These volumes will become authoritative."—*Brooklyn Eagle.* 2 vols. With portraits and maps. $5.00 *net.* Postage 35 cents.

JOHN A. ANDREW

By Henry G. Pearson

"These two handsome volumes are a distinct and valuable contribution to the history of Massachusetts and of the times of the civil war. Mr. Pearson has given a picture of him, vivid and engaging, and so comprehensive as to be almost an outline story of the State in one of the most momentous periods of its history."—*The Watchman,* Boston. 2 vols., with portraits, $5.00 *net.* Postage 36 cents.

JOURNAL OF A TOUR TO THE OHIO, 1748
By CONRAD WEISER

Tours into the Western Country, 1750-65
By GEORGE CROGHAN

Two Western Tours, 1758-59
By CHAS. F. POST

THRILLING EXPERIENCES UPON THE MAUMEE, 1764
By CAPT. T. MORRIS

Edited with notes, etc., by
REUBEN GOLD THWAITES, LL.D.

One volume, large 8vo, pp. 328, cloth, gilt top. Price $4.00 net, express prepaid.

Admirably epitomizes the history of English relations with the French and Indians upon the Western Borders during the important epoch of the last French war and its sequel. Pontiac's Conspiracy. Of the authors two (Weiser and Croghan) were Government Indian agents; one (Post) was a Moravian missionary; and the other (Morris) was a British army officer. The experiences which they recount are as varied as were their vocations.

"The books are handsomely bound and printed. The editing by Mr. Thwaites seems to have been done with his customary care and knowledge. There is no want of helpful annotations. The books therefore will be likely to be of more real value than the early prints from which they are taken."—*American Historical Review.*

"Very interesting for the descriptions of Indian life and customs, and valuable for history and geography classes. Inviting reading for any one who is interested in early conditions as contrasted with the present. Well annotated and attractively printed."—*The Journal of Geography.*

THE ARTHUR H. CLARK COMPANY
CLEVELAND, O.

GATEWAY SERIES OF ENGLISH TEXTS

General Editor, HENRY VAN DYKE

A series of eighteen volumes, which includes all the college entrance requirements in English. The books are convenient in form, attractively and substantially bound, and printed from clear type. The texts are derived from the latest authoritative sources. The notes are added with the aim not to make as many as possible, but to make them as useful as possible. The editing of these volumes is carefully and judiciously done, the books being treated as pieces of literature, rather than as frameworks for erudite theories of criticism. The actual needs and capacities of the young people who are to read and study them have been borne in mind.

STANDARD TEXT-BOOKS

SUPPLEMENTARY READING

Nearly a quarter of a century ago, Messrs. Ginn & Company, by issuing their "Classics for Children," introduced to the school world the first supplementary reading books. Beginning with some 56 carefully annotated works the publishers have added to these classics many interesting and authoritative books on science, travel, and biography. To-day their list of supplementary readers and books for school libraries (including about 300 titles) is so complete that it may serve as a bibliography to the best reading for children.

"What Are Our Young People Reading?" a suggestive monograph by President L. H. Jones, of the Michigan State Normal College, will be sent postpaid to any address on request. It is accompanied by a catalogue of the supplementary readers issued by the publishers.

The Jane Andrews Books.
Grimm's Fairy Tales.
Andersen's Fairy Tales.
Defoe's Robinson Crusoe.
Wyss' Swiss Family Robinson.
Swift's Gulliver's Travels.
Greene's Legends of King Arthur.
Shaw's Stories of the Ancient Greeks.

The Youth's Companion Series.
Cramp's Adventures of Pinocchio.
Chance's Little Folks of Many Lands.

Mr. Daniel Gregory Mason's Beethoven and his Forerunners

is an untechnical interesting story of the development of instrumental music. *Cloth, $1.50 net (postage 12c.)*

Published by THE MACMILLAN COMPANY 66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, DECEMBER 15, 1904.

The Week.

The President's message in no way appears more interesting than when it is compared with the party platform. The document, as printed in the minion type of this newspaper, fills 336 inches. Of this only a fraction over 108 inches is devoted to the subjects which the platform included. The tariff and reciprocity are not mentioned at all. There is no mention, either, of the Southern representation plank. The pension problem is dismissed in 41 words, and the whole question of the upbuilding of a merchant marine, so dear to Republican hearts, receives only 16 words in the message, though it had 90 in the party platform. All this is but another way of showing how largely the message is a personal rather than a party document. It touches on 32 main topics, of which several naturally fall into subdivisions. Only eight of them can be called matters of party policy in any sense. But we find at the same time only a very slight admixture of that concentrated essence of political wisdom which was distilled at Chicago in the last week of June. The session is still before us, of course, and the members of the next Congress are only beginning to turn their minds to matters of statesmanship. But if the time shall come when all is not harmony between the executive and legislative branches of the National Government, some of the peculiar features of this message will be worth looking back to.

We are seeing just now an illustration of the value of cynicism in public affairs—we use the word in its good sense. Lord Salisbury, for example, was called a cynic, but this often meant simply that he applied the severe tests of experience and practicability and truth to current proposals for bringing in the millennium. "Is it not," demanded Rosebery, the other day, in his *éloge* on Salisbury, "a priceless advantage, when an untimely or importunate question is put, or some subject is advanced which it is not desirable to discuss, to have the acid, the cynicism, to apply to it to dissolve it, at any rate for the moment?" The process is at work before our eyes in the case of President Roosevelt's programme. This is of immense scope, ranging, in its benevolent intent of improving everything, from the regulation of child-labor to cutting off the tentacles of *Octopus Horribilis*. But already men are comforting themselves with the reflection that little if anything will be done. This is a tough old world, they are saying, and it is a good thing that it is, in order to withstand the impetuous charge of those who would reform everything by unsettling everything. There is no straiter sect of cynics than United States Senators, and they are already applying the acid to the President's plans. Senator Quarles, for instance, cheerfully observes that Mr. Roosevelt's recommendation that the Interstate Commerce Commission be empowered to fix railway rates, was rejected by the Senate even before it was written.

The brief paragraph in the President's message on the currency question embraces two proposals which, a few years ago, would have been considered rash and dangerous in a political if not in a financial sense. He advises that the proper committees of Congress consider the question of the retirement of the greenbacks, and the problem of securing in our currency such elasticity as is consistent with safety. He holds, also, that every silver dollar should be made by law redeemable in gold at the will of the holder. These recommendations are conservative and prudent. In urging the retirement of the greenbacks, the President has simply reverted to the declared policy of the Republican party soon after the close of the civil war. In 1865 the Secretary of the Treasury (McCulloch) recommended such retirement, and Congress, by a nearly unanimous vote, passed a law to carry it into effect at the rate of $4,000,000 per month. It remained in force two years and two months. If it had not been repealed, we should probably have avoided the panics of 1873 and 1893, and the later calling in question of the standard of value. President Roosevelt's recommendation that the silver dollar be made redeemable in gold is likewise a revival. The so-called gold standard act of 1900, as originally passed by the House, contained a clause of this purport, which was, for some inscrutable reason, stricken out by the Senate. If it had been passed, it is not likely that even one silver dollar would ever have been presented for redemption in gold; yet the redeemability clause is needed to unify our monetary system.

It is now officially announced that Mr. Roosevelt will not summon Congress in extraordinary session, next March, to revise the tariff. That decision may be wise—there are obvious arguments in its favor; and it does not necessarily imply that the President's purpose is slackened. Yet it will undoubtedly stiffen stand-patting. The professors of that art will smile knowingly, and will say that it will be easy to secure adjournment after adjournment of tariff reform. To kill by waiting for a convenient season is an old political manœuvre. Those who have staved off a March session will now apply themselves to the work of preventing an October session. Revising the tariff is like pulling a diseased tooth—it can always be borne better at some other time, which never arrives. It is said that the President is hesitating, not as regards what he wants to see done, but in respect to the means of doing it. He appears to have a morbid dread of "splitting his party." His knowledge of political history seems to weigh upon him. He wishes to profit by the misfortunes of his predecessors. No Grover Cleveland rows for him! Yet a powerful sentiment lies ready to be evoked in his party. Republicans all over the country are sick and tired of the high tariff. They know it to be obsolete; they suspect it of being oppressive. Of many schedules they feel, with Congressman McCall, that they cannot look people in the eye and speak in defence. Reform is not only needed; there is an immense latent demand for it within the Republican party. It is for President Roosevelt to summon this forth and convert it into an actual political energy. But he cannot do this successfully by private conferences, no matter how numerous or with how eminent personages. He should, somehow, publicly lift a standard to which honest reformers may repair.

The Secretary of the Treasury, in his annual report, estimates, for the fiscal year ending with next June, a deficit of $18,000,000. Since the deficit for the five completed months of that fiscal year has been $25,900,000, a surplus of nearly $8,000,000 is evidently expected by the Treasury from the operations of this month and the six which follow. This is not unreasonable expectation; a surplus of some $20,000,000 was earned in the same months of the past fiscal year, and the increased expenses of the Government will not wholly nullify the analogy. The estimate of a $22,300,000 surplus for the fiscal year 1906 is rather more doubtful. It assumes, first, a $15,000,000 reduction in appropriations, and, second, a revenue from customs and excise $14,000,000 above the estimate for the present year, and $17,000,000 beyond the results of the twelve-month ending with June, 1903. There is, of course, a more or less steady advance, under normal circumstances, in public income from these sources; and the Secretary also points out that $7,500,000 of the decrease in last year's customs yield resulted from the removal of taxes on Cuban sugar and tobacco. But it is not entirely safe, especially

with the customs, to predict a year and a half ahead. The final result depends on the country's purchase of foreign goods in the interim. The Secretary himself, indeed, ends his review of the situation by remarking, "It is evident that the policy of public improvements cannot be enlarged upon without providing some measure for a corresponding increase in revenue."

One could wish that the bill dealing with negro disfranchisement could have had a better sponsor than Senator Thomas C. Platt. But as the President is apparently determined to ignore the part of the Republican platform dealing with this subject, there is no chance of the measure being seriously pushed in this session of Congress. Its introduction serves to call public attention forcibly to a condition of gross political inequity as between the States, and of grave injustice as affects a whole race. Such wrongs it is better to discuss, and even agitate, than to allow to sleep. They will not sleep. The last election signified that thousands of earnest and honest men in the North are deeply concerned at the discrimination against negro voters in the South. They do not propose to leave the matter alone. They are looking for a remedy, and will not be content till one is found. Of course, the simplest and most obvious remedy is in the hands of the Southern States themselves. Let them enact such laws regulating the franchise as they may think necessary to guard against illiteracy and poverty, but let them be impartially enforced with black and white alike. That is the sting of the present system—it lets in every ignorant and worthless white, and disfranchises thousands of intelligent and property-owning blacks.

The shallow suggestion that the South ought to cut loose from the Northern Democracy and go its own way in political matters, has served a good purpose in eliciting frank and significant discussion. The Charleston *News and Courier*, for instance, takes the view that, even if political independence were in itself desirable for the South, she has not at present the men to make it effective. "What man is there in the public life of the South to-day," it asks, "who would make an available candidate for President?" "When the tariff was under consideration," it goes on, "and they [the Southern politicians] were in position to settle the question on a fair basis, they were coquetting with the subject in a purely local way. They ran off into the wilderness after false lights on the money question. They fell into line with the Republicans on the Panama issue, and took everything that came their way when the Republican Administration at Washington entered upon its policy of territorial acquisition." Moreover, "the 5,000,000 Democratic voters in the North and West are entitled to as much consideration, surely, as the 2,000,000 Democratic voters in the South." As a matter of fact, criticism about as harsh could probably be applied to the representatives of any other group of twelve contiguous States, if we set them apart for special scrutiny. Drawing its officeholders from every corner of the nation, neither of our great parties, as it is, finds a supply of ability and integrity in excess of the demand.

Without Mr. Hepburn's annual motion to strike out the appropriation for the Civil Service Commission, we might not fully realize that we are enjoying the benefits of a reformed system. As it happened, Mr. Hepburn's protest and Gen. Grosvenor's exposition of the pitiful case of a rural carrier who had been "hounded" by agents of the Commission, fell on the same day as the convention of the Civil Service Reform League. To the veterans of this cause the empty wrath of Grosvenor and Hepburn must recall those early days when they themselves were looked upon as ridiculous if not pestilent persons. Now their principle of appointment by merit is so firmly entrenched that the few advocates of the spoils system who have the courage of their convictions bear an obsolete aspect, as if doddering on in ignorance of the passing of their dispensation. Mr. Schurz's address brought out the real services of President Roosevelt. There never has been any doubt where his heart has been; the cause has had more consistent champions, but none stouter. Yet Mr. Schurz very properly recalled the numerous cases in which Mr. Roosevelt had suspended the civil-service rules. This shows that curious tendency in reformers to assume powers—counting on their own virtue—which they would shudder to see exercised by corrupt politicians. That, as Mr. Schurz pointed out, is to assume that good men will always be elected, and to assert that the good do not need the steadying influence of law. Both assumptions are genial, but obviously perilous. It is highly significant of the progress that has been made that the civil-service reformers of to-day concern themselves not with the onslaughts of their foes, but with the foibles of their friends.

The discovery by Senator Spooner on Monday of a loophole in the Philippine Improvement bill through which our Government might lose millions, was one of those cases in public life where a specialist's knowledge can pick out in a moment a flaw which all the industry and conscientiousness in the world would have failed to correct. Leaving out of account the principle of the bill, there was every reason to suppose that in matters of detail it had been subjected to such scrutiny as would bring it near perfection in point of workmanship. It had been approved by the Philippine Commission, and Secretary Taft had gone over it in detail with the House committee. That committee, including such experienced legislators as Cooper, Tawney, and Crumpacker, had worked over it for weeks before making its report, with an aggressive minority to keep them vigilant. In the Senate it passed through another committee headed by Henry Cabot Lodge, and including Hale, Proctor, Beveridge, and Burrows. Yet, apparently, nobody perceived that the clause authorizing the Government to guarantee the income of Philippine railroads was so worded that those railroads might become insolvent under conditions that would leave the Government no protection. Senator Spooner's opponents in Wisconsin have harped on his former connections as a "railroad attorney," but it now appears that his thorough knowledge of railroad law is a very valuable thing to the country.

The Senate's strict adherence to the principle of seniority in apportioning privileges and responsibilities among its members is, we presume, in the long run a wise policy, yet in its application to some particular cases it comes perilously near absurdity. The two Senators who took their seats last week, for instance, are men of deserved national reputation, and both are experienced in public affairs. They have to fall in, nevertheless, behind the group of millionaire Senators who are negligible factors in legislation. It will be, in some ways, even more preposterous when Mr. Hemenway comes over from the House and is compelled to begin like any apprentice. Here is a seasoned legislator who has filled with success a position of responsibility in the House analogous to that of Mr. Allison in the Senate. Yet it will be more than ten years before he can be regarded as a leading figure in the Senate and hold any of the important committee places. Mr. Knox and Mr. Crane, in the quiet of their subterranean committee rooms, have at least the prospective satisfaction that it is almost as hard to dislodge a man from the top of the ladder after he once gets there as it was for him to make the ascent.

Seventy-four years have passed since the House of Representatives last had occasion to impeach a Federal judge. The question now affecting the Federal judiciary is happily not to be made in any sense a party issue. There was considerable danger last year that it might be. Eleven Republicans and six Democrats constituted the Judiciary Committee to which the Swayne case was referred. The six Democrats and two of the Republicans (four being absent) believed

that the evidence already taken justified impeachment proceedings against the Florida judge, while the other five Republicans dissented. But the absentee members interested themselves in the case, two of them signing the minority report against impeachment, and the other two being understood to incline that way. So there was presented the anomaly of a "minority" including more than half of a deliberative body. Judge Swayne was a Republican appointee, and it did not assist a non-partisan disposition of his case to find all the Democrats on one side and four-fifths of the Republicans on the other. The postponement was regrettable because the Senate cannot well hear the case for another year, and, if Swayne is found to be an unfit judge, he will have remained on the bench for two years longer than was really necessary. The House voted for his impeachment on Tuesday.

The question which thinking people will ask, in the face of the recent extraordinary performances in Wall Street, is what effect the affair will have on American finance, in the eyes of home or foreign observers. We do not now refer to the crazy outbreaks of a vulgar and sensational charlatan, with his impudent assumption of the right to speak for sober investors. Wall Street itself has abandoned its original and extremely foolish notion that all of the past week's collapse on the Stock Exchange was caused by one man with neither character, affiliations, nor resources sufficient for anything of the sort. It has directed its attention, rather, to the question, What was the condition of a general investment market, or of separate investment properties, which could be thrown into such chaos by any combination of stock-jobbing influences? For it must be observed that this month's fall of 5 to 20 points in values of active securities has been accompanied by no disquieting general news, by no serious tightening of the money market, and by absolutely no change in the financial outlook from what it was a month ago. What is the public to conclude, then, regarding a market and a community in which such things can happen?

Nothing has been more freely recognized, nothing more frequently proclaimed by intelligent observers this past autumn, than the fact that a gambling ring had seized the occasion of returning prosperity in America, and of an easy money market, to push up prices on the Stock Exchange in a manner so extravagant and reckless as to invite, many weeks ago, repeated predictions of disaster. The fact that the speculative public engaged in this reckless game, notwithstanding warnings from every trustworthy source, is of itself sufficient explanation of the rotten condition in which the stock market was found when speculators attacked it during the past week. We think the entire episode creditable neither to the wealthy capitalists engaged in it, nor to the outsiders who followed them, nor to the banks which provided the fuel for the speculative blaze. To our mind, it is no answer to say that the bank must lend to any one presenting marketable collateral, and that these people proffered such security. One does not hear of this sort of fast-and-loose use of depositors' money by the great banks of Paris and London. Our feeling is that the spectacle presented in the money market of the past two months—of notorious speculators borrowing money to buy stocks, securing those loans by the very stocks thus bought, advancing prices ten or fifteen points through the magnitude of their purchases, increasing their loans to precisely that extent because of the rise in value of the collateral, and straightway throwing into the speculative market the extra capital thus procured—is utterly discreditable to a sober banking community.

The St. Petersburg riots do not seem to be of great significance, save as a symptom of the general unrest. They were the protest of the reds against the zemstvo movement, hitherto heralded as a radical agitation, and show conclusively that for thousands of Socialists the reforms for which the zemstvo presidents are contending are far from satisfying. It must not be forgotten, however, that the radicals have paraded in St. Petersburg before, and that there have been many such demonstrations of late in various parts of the Empire, of far greater significance. The open denunciation of the war will, of course, displease those patriots and jingo editors the world over who in time of war preach the doctrine, "Our country right or wrong." We can imagine the horror which a similar protest in the streets of New York against the war with Spain would have created in certain quarters. It would have been treason at its worst. But in Russia the teachings and examples of Tolstoy seem not to have been without effect. There is no reason, not even the giving comfort to the enemy, which should prevent free men from denouncing a war made by their rulers, in which they have no part save to die or to shoulder the cost, and of which they heartily disapprove. Silence gives consent, particularly where the actions of tyrants are concerned.

When the French Premier was nearly defeated, three weeks ago, on a motion condemning spying upon army officers, the Government press declared that the Deputies had been stampeded by the sensational revelations in *Figaro*. M. Combes so fully took this view that, after allowing the Minister of War to resign, he published the circular which requires all officeholders to report on the political fidelity of their associates. That is, M. Combes maintained that no one who was not a "good Republican" should hold office, and boldly took the ground that all *fonctionnaires* were in honor and duty bound to report any disloyalty in their fellows. From this point of view, Gen. André was forced out, not because he urged his officers to inform on each other—indeed, the system of army espionage was defended as normal and necessary: Gen. André's fault lay rather in conducting the system badly, in heeding loose and anonymous accusations, and the like. That the Chamber of Deputies does not agree with M. Combes's casuistry was shown by the vote of Thursday, in which, on a motion to prosecute official informers, the Government majority was reduced to a bare two, showing that the former ominous vote was not the result of a stampede, but of well-rooted dislike of this sorry spying business. Of course, M. Combes always has the bill separating Church and State, to which all factions of the *bloc* will rally; but with this very dangerous issue of espionage prominent, and a radical income tax to carry, his position grows distinctly weaker.

The German Reichstag begins its sessions in the face of a discouraging financial situation. Of the individual States, Prussia's housekeeping is alone on a sound basis. That the national finances are very unsatisfactory, the Secretary of the Imperial Treasury was forced to admit. Still, in spite of rapidly growing expenditures, a national debt increased by four hundred million marks within a year, and an income the amount of which is admitted to be very uncertain, the nation is to go on its way with no thought of retrenchment. The army is to be increased once more by a number of regiments, the uprising in Southwest Africa must be put down at any cost to satisfy the national "honor," and the policy of wasting large sums on the other colonies is to be pursued. Naturally, all this afforded an opportunity to the great Social Democratic leader, Bebel. He asked very unpleasant questions. Why increase the navy, enlarge the army, plunge into rash foreign ventures, and thereby mortgage the future and put heavier and heavier burdens upon German industry? The Chancellor could make no reply, save to repeat the Rooseveltian assurances that large armaments make for peace. And he added—with an argument which we commend to our brand-new Secretary of the Navy—"A country which pays out every year $750,000,000 for spirituous wines and liquors can also pay $300,000,000 a year as an insurance premium for its security."

RAILWAY RATE PROBLEMS.

Two serious problems relating to the railways are discussed by President Roosevelt in one paragraph of his message, and under the one heading, "Rebates." He begins by declaring that "the rebate must be stopped" and that the legislation of Congress against it "must be enforced." He ends by recommending an extension of the powers of the Interstate Commerce Commission by which that body shall be enabled to fix rates, subject to review by the courts. The juxtaposition of these topics would lead the casual reader to suppose that this grant of authority to the Commission would not only cure the evil of secret rebates, but would also satisfy those shippers, particularly the farmers of the West, who are clamoring for lower rates. These are, however, two distinct matters; for even if the rates fixed by the Commission should please the farmer, there would still remain the possibility of illegal favors to large and influential shippers.

The plan to enlarge the power of the Interstate Commission is embodied in a bill introduced in the last session by Senator Quarles and Representative Cooper. The authority which the bill proposes to confer is vast, and might be subject to fearful abuse in the hands of a reckless or unscrupulous majority of the Commission. Were the radicals to ride into office and hold high place for a few years, they might, through the Commission, give the railways a terrible drubbing before the courts had time to act. For this reason a conservative man cannot with entire equanimity contemplate the passage of the act. And yet the attitude of stubborn resistance assumed by many railway men is also menacing. The beauties of the Cooper bill have recently been urged on the President by the Governors of Iowa, Minnesota, and Wisconsin. Behind these executives are the enthusiastic resolutions of many chambers of commerce and agricultural organizations. The strength of this feeling is shown by the reëlection of Gov. La Follette in Wisconsin, and the incessant agitation against the railways in Nebraska, Kansas, Washington, and California—to mention only a few striking cases. Indubitably the measure commands wide popular support.

This movement, if it cannot find vent in one way, will make it in another. Should the railways concede nothing to the Interstate Commerce Commission, they may be forced to yield much to a dozen State railway commissions. At this moment the agitators are comparatively quiet, for prices on agricultural products are so high that freight charges are not pressing the farmer sharply. But a heavy drop in wheat, corn, or cotton would rouse every slumbering Populist and set him to shrieking that his margin of profit is eaten up by the railways. The question in this aspect is political rather than financial. Railway presidents and managers are familiar with the inevitable results. If they fail to accede to an often reasonable request for fairer rates, if they continue to be a corrupting influence in State politics, they can look for serious trouble during the next pinch of hard times. The opponents, then, of the Cooper bill should not "stand pat," but should offer some substitute or compromise to satisfy public sentiment.

The secret rebate has no open friends or defenders. The railway president who is stoutest in resisting demagogues, admits frankly that nothing too harsh can be said about the officer who gives and the man who takes rebates. He can also point to the undoubted fact that were the rebate in its various forms—operating through terminal and elevator charges, private-car contracts, and sidetrack systems—swept away, much of the hostilities to railways would go with it. The farmer is angry not so much because he is paying a ten-dollar freight bill as because he believes some rich corporation is paying only five. He rages against the injustice which puts him at the mercy of a Beef Trust or wheat ring. If he were sure of a fair field and no favor, he might acquiesce in existing rates with some complacency. But when he discovers that he is undermined, he says in his haste that all railway officials are liars, and that the worst is too good for them. This subject of rebates has recently been discussed very fully in articles on the Standard Oil Company in *McClure's Magazine*. They have refreshed our memories by reprinting from the abundant testimony that the oil monopoly succeeded in crushing competitors largely through the collusion, sometimes criminal, of railway officers. There are good grounds for belief that other huge corporations have enjoyed and are enjoying similar advantages. Such outrage, as current newspaper comment shows, has kindled throughout the country a deep and abiding wrath.

But the remedy has not yet been discovered. Like the thief and the receiver, both the railway and the pet shipper are bound to secrecy by every possible motive. The manager who sees his traffic slipping away from him is likely to turn, like a rat in a corner, and match the rate of some rival whom he suspects of underbidding him. The heavier the pains and penalties and the greater the risk, the more desperately he may cut. He may as well be hanged for a sheep as a lamb. The President can say "must be stopped" and "must be enforced"; but no man has yet devised the machinery that will do this work. It is the farmer's or small merchant's knowledge that he is actually impotent against a conspiracy of force and fraud that incites him to his bitterest denunciations of railways, to his propaganda of State ownership. The large Socialist vote of the last election is one of the straws on the current. It is to avoid being sucked into a whirlpool of Socialism that we urge the railway interests to offer in Congress not an obstructive but a constructive policy.

THE PURSUIT OF PURE FOOD.

The pure-food bill raised its head in the Senate on Thursday just long enough to be pushed back into retirement. There, according to the best information, it is likely to remain until the end of the session. Meanwhile, other developments keep interest in the subject alive. One of the latest contributions is the Secretary of Agriculture's report on the completion of the first series of "poison-squad" experiments at Washington. The detailed statement of results in these tests is still to be published, but the general conclusions are discussed by Secretary Wilson.

He does not hold that the results of these experiments would warrant the absolute prohibition of the use of borax as a preservative, but he does think that it should be restricted to cases "where the necessity therefor is clearly manifest, and where it is demonstrable that other methods of food preservation are not applicable, and that without the use of such a preservative the deleterious effects produced by the foods themselves, by reason of decomposition, would be far greater than could possibly come from the use of the preservative in minimum quantities." Whenever preservatives of any sort are used, he urges that the label should plainly indicate the fact, for the safeguarding of the young, sick, or debilitated.

Dr. Wiley's report, when published, will contain, it is understood, all the original data concerning the daily physical condition of each of the young men selected as subjects, so that any independent student will be at liberty to dispute the official conclusions if he chooses, and put his own interpretation on the facts as brought out. Meanwhile, the results as made public are that one half gramme per day of borax or boric acid is too much for the normal man to receive regularly, though he can take that quantity for a limited period with impunity. Daily doses of 4 or 5 grammes usually bring about loss of appetite and decreased efficiency for work. Doses of 3 grammes, 2 grammes, and sometimes even 1 gramme per day, produced the same symptoms in lesser degree, though a majority of the men under observation were able to take 3 grammes per day for a somewhat protracted period without being unfitted for duty.

Translating these proportions into terms of food as bought in the market is not easy. The preparations sold for preserving sausage or Hamburg steak, if used according to directions, should be mixed in the proportion of eight ounces to the hundred pounds of meat.

About three ounces of the eight are borax. Thus, roughly speaking, each pound of sausage contains 15 grains, or one gramme, of borax. As a matter of fact, it is often used carelessly by butchers, and the proportion varies greatly. In meat the surface of which has merely been washed with borax, the proportion would be extremely small. On the other hand, some products contain very large quantities. The Chinese prepare the broken eggs which they sell to bakers in this country, by mixing four or five pounds of borax to the hundred pounds of stale eggs. This would mean a proportion of about 20 grammes to the pound, and there might be nearly a gramme in a single slice of cake.

This, then, is the outcome of the Government's long-continued interest in the question whether borax is or is not injurious when added to food. The conclusions are doubly interesting when we recall what it was that first interested the American people in the borax question at all. When the German Government, four years ago, applied a new set of restrictions to American meat products, one of them based on the theory that borax was unwholesome, who does not remember the protest that went up from the packers and their sympathetic fellow-countrymen? The excuse given, everybody said, was a mere pretence. The real object was merely to hurt our foreign trade. Our Government hunted up and got ready for use an old law which authorized retaliatory measures against any nation which should impose unreasonable restrictions on our products. That the ruling was "unreasonable" was taken for granted.

Now, the careful investigations of our own Government seem to vindicate that part of Germany's contention which related to the use of borax. The law against foreign adulterated products, which went into effect last June, and under which a great deal of good has already been accomplished, is based in part on the retaliatory theory. It provides merely that no country shall be allowed to export to us any articles of food or drink which would come under the ban of their laws if offered for sale at home. What they will let their own people eat, we will let them send to us. But if we make a regulation against a certain product, it ought to be because we ourselves think it harmful, not because some other nation thinks it so when it comes from us.

There met at St. Louis last month an International Pure Food Congress, including representatives of foreign governments, the State Dairy and Food Departments, and State Boards of Health in this country, the United States Department of Agriculture, and the various food-manufacturing interests. In dealing with the question of antiseptics in food, this congress passed some very sound resolutions. It cannot be too often emphasized that "there are available unobjectionable methods of preserving foods; for example, limited cold storage, desiccation, sterilization, and the use of the long-employed and condimental preserving agents, such as salt, sugar, vinegar, and wood smoke." The Congress resolved, further, that "the use of preservatives and antiseptics other than those mentioned above must be, previous to their use, justified by the manufacturer, and no citizen should be required to ascertain for himself whether or not the food we consume contains an added preservative other than those mentioned above; and, therefore, when any other preservative or antiseptic is added to food, the name and amount thereof should plainly appear upon the label."

One case which the manufacturers would put forward for justification under such a rule would be that of salt codfish. This staple product is prepared with a surface application of borax. The Massachusetts representatives presented its claims with such force before Congress last year that the Hepburn bill was amended so as to make an exception in favor of such preservatives as would naturally be washed away in the ordinary preparation of the food. Specific legislation against a particular ingredient employed in food products ought to be a last resort. The history of such measures as the Missouri "alum law" shows the dangers that lie in this class of measures. As Dr. Wiley once said of French peas, "If people want to have copper-plated stomachs, it is not my affair." But there is nothing of sumptuary legislation in a law which warns the purchaser that there is copper in those peas.

POLITICAL PROGRESS IN RUSSIA.

The outcome of the zemstvo movement is still in the balance, and we would not hazard a prediction what turn the pronounced constitutionalist tendency of the Russian "intellectuals" may take in the immediate future. Prince Mirsky is at the present moment the pivotal point, with liberalism and autocracy at the two ends of the balance; but not even his most ardent friends put much faith in his ability to dominate the situation. Everybody admits his kindness and honesty, but he has not yet been tried in any political capacity, and the fear is lest his conciliatory spirit lead him into half-measures and compromises. The friends of liberty have already declared in unmistakable words that nothing short of a complete acceptance of the programme will satisfy them, while Prince Meshtchersky, who has for a long time acted as the spokesman of the autocracy, and who did not even like Von Plehve's "too liberal" views, has started out to make the minister's position untenable from another side.

The Czar has, indeed, awakened to the seriousness and urgency of the liberal movement. He could cut the knot by granting at once a fair measure of the demands of his most intelligent subjects. That would check the revolutionary propaganda, which is now stronger and more widespread than ever, and would strengthen the autocracy. But the Czar has in his former answers to various deputations displayed such ignorance of simple economic and political facts that it is not likely that he will be able to follow his "better" judgment. For these reasons the zemstvo movement may prove a complete fiasco for the present, and the direct result of it may be to intensify the even now intolerable severity of the bureaucratic régime.

It is generally assumed that the Russo-Japanese war and the death of two ministers, Sipyagin and Von Plehve, by the hand of the terrorist assassins are alone responsible for the apparent leniency the Government is exercising in allowing free discussion by the zemstvo leaders. It is also assumed that there is nothing in the past to warrant the continuance of the liberal movement. But this view is based on the former failures of the nihilists, anarchists, socialists, and populists either to unite for concerted action or to grow steadily. Things have, however, enormously changed since the eighties. During the nineties, and still more so since the beginning of the new century, there have been many indications that the first favorable opportunity, such as an unsuccessful war, would be seized for just the kind of constitutionalist movement that is now afoot in Russia. There is absolutely nothing sudden or unexpected in the present tendency. The opposition forces, while following out their own individual social-democratic, socialist-terrorist, or Tolstoyan programmes, have for the first time in Russian history met on common ground. Since 1902 they have freely exchanged their views in a bi-monthly, excellently conducted, at first in Stuttgart and lately in Paris, by Peter Struve. This periodical, the *Osvobozhdenie* (Liberation), was created for the purpose of uniting all forces in the great struggle for constitutionalism. Its influence on the liberals of Russia has been great and permanent.

In its very first number we find the germ of the present zemstvo demands. Most interesting is the extraordinary part that is ascribed to Leo Tolstoy in preparing the minds of Russia for the coming struggle. He is opposed to Pobyedonastseff as "the national hero of the new Russia," as "the most Russian of all the Russians." The Liberals are not at all inclined to accept Tolstoy's doctrines, but his extreme opposition to the present order is hailed by them. Nor is the liberal movement confined to the "intellectuals," as was the case with the previous movements.

The laborers throughout the length and breadth of Russia are permeated with the revolutionary spirit; and strikes, demonstrations, free fights with the police, of which the world hears but little, are the order of the day. Within the last few months very serious conflicts have occurred in Warsaw between the laborers and the police and soldiery. Even the army is filled with the spirit of opposition, and not only have reservists caused riots, but soldiers have even refused obedience to their officers. The apathy of the people towards the present war is unparalleled in Russian history. Lately a high premium was offered to the gendarmery of one of the Polish provinces if they volunteered to do service in the Far East. Not a single man came forward. The present contest is conducted solely by the Government party, with scant sympathy from the nation at large. Not a disparaging word is said of the Japanese; Japanese prisoners are showered with attentions which disgust the bureaucrats; Russian prisoners in Japan are loath to leave their captivity.

The information to be gleaned not only from the *Osvobozhdenie*, but also from the Tolstoy, the revolutionary, the social-democratic periodicals, and even from the newspapers and magazines which are printed in Russia under the very eyes of the censor, bears witness to a tumultuous state of affairs. Yet it cannot be said that the liberals will be at once able to substitute anything for the present well-organized bureaucratic machinery. No one in Russia has had sufficient political training to be able to deal with the situation. The liberals themselves are quite aware of the fact, and do not try to conceal it; but they all agree that matters could not possibly be worse than they now are. They believe that only a national representation and a liberal constitution can save Russia. Though the present movement may not be crowned with success, there has never before been such hopefulness in Russia as to the ultimate and even speedy victory of constitutionalism.

TECHNICAL EDUCATION.

The Massachusetts Institute of Technology celebrated on December 7 the one-hundredth anniversary of the birth of its founder and first president, William Barton Rogers. All the speakers dwelt on what Prof. Francis H. Smith of the University of Virginia called the "breadth of interests" possessed by President Rogers. It was this that enabled him, as one of his pupils said, to divine the need of a coming age, to persuade a whole community to accept and support the new conception, and to influence and mould students and teachers into a working model that has been imitated, consciously or unconsciously, by "every successful scientific school in the English-speaking world." The Institute policy of offering, in addition to excellent technical instruction, some strong courses in history, economics, literature, and modern languages—general-culture courses—is one of the things that have made it possible for this school to spring up and flourish in the very shadow of Harvard.

The necessity of breadth of culture in a technical school was also the theme of John R. Freeman in an address at the inauguration of President Charles S. Howe of the Case School of Applied Science in Cleveland. Mr. Freeman, whose work on the problems of New York water supply has made his name very familiar here, is an eminent and successful engineer himself and a student of educational questions. He may, therefore, be accepted as a competent witness. He quotes a manager of large industrial works as saying that a faithful uneducated laborer would generally keep a more correct tally-sheet of the unloading of a cargo than a bright high-school graduate whose thoughts were flying off on other things; that a large engine would be run with better attention and fewer breakdowns by a graduated stoker or oiler than by an expert machinist, who might be thinking out improvements instead of watching the mere operation of the machine; in short, that the best routine work is often done by a man incapable of anything much better. Mr. Freeman's conclusion is that the young man who is deficient in ambition or who cannot master "the art of getting on in the world," who is fated to follow a narrow routine, will not gain much efficiency, as a machine, by the long and elaborate curriculum of the technical school. On the same principle, those who possess energy, judgment, and "initiative" will profit greatly by something that is broader than a severe technical training.

Technical graduates, in Mr. Freeman's view, fall roughly into two classes: men of the higher grade, "the captains who will establish their own industrial works or be called to the $10,000 positions which are always so hard to fill right"; and lieutenants, sergeants, corporals, and privates, who occupy the lower places. His aim would be, by addressing teaching to the highest grade, to produce more of the $10,000 men and at the same time better $4,000 men. To this end he lays emphasis on the fact that the purpose of the technical school is substantially that of any good college:

> "The chief function of the Technical School is not the filling of a man's memory with formulas and with knowledge of how everything is made, but rather is the training in methods of thoughtful research, of teaching how to put the question and where and how to find the answer, of how to set traps for our own unconscious errors, how to save time by understanding just what degree of precision is necessary to the case in hand, how to measure with certainty the limits of the ever-present error, and, above all, to develop and strengthen a warm, enthusiastic, undeviating love for the truth."

When this goal is held steadily in view, the technical courses are merely part of a discipline that enables an engineer to move with firm step through his own professional field, and at the same time to see the larger bearings of his subject, its relation to progress in all sciences and arts. This was the notion upon which the late Francis A. Walker so often laid stress during his presidency of the Massachusetts Institute. No engineer, he maintained, could reach the top of his profession without a general education which the man absorbed in technical details is likely to disregard. On this theory it was that President Walker strove so hard to maintain the so-called culture courses in the Institute.

Never more than at the present moment has there been need of preachers of this sound gospel. The enormous extension of scientific knowledge, the division and subdivision of our college courses until each covers a minute field with almost microscopic attention, has tended to make your specialist in all branches a man of narrow vision and atrophied sympathies. In the technical schools this tendency has inevitably been stronger than elsewhere. The generation which first discovered the practical value of scientific training could not help going a little too far in its enthusiasm. The reaction against the old rigid curriculum which practically excluded the sciences, produced a new curriculum which practically excluded everything else. Technical knowledge, once the neglected waif, became in a few swift years a spoiled darling. We are now able to look about us at things as they are. The experiment of half a century has produced results from which generalization is possible. The men of the elder day who had only the meagre college education of 1850, scarcely broader than that of 1750, were not so pitiably our intellectual inferiors. They sometimes learned to use their minds, which was, after all, the main thing. If they knew less than we about the "scientific method," they at least enjoyed the distinction of formulating that method and applying it in the spirit which should inform all education: *Humani nil a me alienum puto.*

TWO ADVENTURESSES.

Naturally, Thérèse Humbert comes to mind when the talk is of Mrs. Chadwick's financial feats, and indeed the parallel is close between the Gascon Mlle. Daurignac and the Canadian country girl Betty Bigley. Both were born of the farmer class, and carried always a kind of rusticity that disarmed suspicion of their real character as adventuresses. Thérèse Daurignac boasted of her father's "Portuguese estate," and raised money on the rumor of a wealthy marriage; Betty Bigley, also of school-girl age, had printed on her cards "Heiress

to $15,000," and actually floated notes for a few hundreds. After girlhood, our impostresses part ways. As a wife and mother, Mme. Humbert was exemplary, while into the chapters hinted at in the names of Mrs. Hoover, Mrs. Bastedo, and Mme. de Vere—to pick up a few at random—we may well decline to look. But the paths rejoin with respectable marriages. Thérèse Daurignac attaches to herself the dilettante son of ex-Minister Humbert; Mrs. Hoover disappears in Mrs. Chadwick, the wife of a well-to-do widower prominent as a physician and in society. Both husbands seem to have played a willing and obedient hand in the great game hazarded by their wives. But we should not underrate these husbands; their part if humble was indispensable. Their known position lent plausibility and weight to the else incredible deceptions practised by their better halves. A new Balzac would find a tempting theme in the husbands of great adventuresses. Here we can only hint at its possibilities, while passing on to the campaign these two women waged so startlingly against the avaricious and light-headed in finance.

And here with all regret the flag must come down. The device of the Frenchwoman was more intellectual, better calculated for a sophisticated race of money lenders. Superficially alike, the prime frauds were really different. Mme. Humbert's thoroughly imaginary litigants procured by writ of court the sealing up of alleged millions of disputed securities in a quite visible safe. There was, to be sure, no inventory, but it was always possible to show an impatient creditor the safe, at least, and tell him, "One day the seals will be broken." And about this safe was woven such a web of suits and countersuits that nobody could imagine that such effects were produced without a real cause. Comparable to the safe in the Avenue de la Grande Armée is Mrs. Chadwick's personal mystery and the custodian of her "trust securities." She had the advantage of a list of securities certified by a trust-company officer, and of a trust receipt seemingly acknowledged by Mr. Carnegie. Note the difference, though, that no dubious creditor of Thérèse could have opened the safe and found the collar buttons except by a somewhat difficult legal process, while any banker of Cassie's could have had word with Mr. Carnegie any day and learned the depth of the lie. And here emerges another point of superiority in the Frenchwoman. The Crawfords, the imaginary disputants of the phantom millions, never existed. Legally, however, they had existence, because suits were conducted in their name. Mme. Humbert's detractors, then, were put in the embarrassing position of trying to prove a negative. That is difficult, and there are still people who believe that the Crawfords, though sought in vain in their imaginary addresses, do yet live somewhere, *perdus*, like Venus or Barbarossa in their caves. Mrs. Chadwick's "trustee," on the contrary, is a most palpable reality; a two-cent stamp would have assured anxious lenders that he had no connection with her transactions.

Into the routine of the two impostures it is unnecessary to go. It is interesting to note only that a scandalous background was useful in either case. Mme. Humbert always explained the elusive habits of the Crawfords by their shame at the source of the millions—the treason of Bazaine; Mrs. Chadwick naturally dwelt upon the pain it would give if the veil should be torn from her past. We have here a hint of the *coulisses* of high finance and of further Balzackian possibilities. As for the rest, it is the old sordid story of bribes and bonuses. The victims for the most part deserve little sympathy. They undertook this shady business knowingly, lured by the promise of usury and of fraudulent personal profits. Again, the dénouement is identical: Thérèse in exile and at last in prison without a friend or a franc from those who had crowded her drawing-rooms; Cassie Chadwick, who had lavished her money upon acquaintances far and wide, seeking in vain a few thousand dollars' bail to keep her out of prison.

Her plan, we have said, was inferior to Mme. Humbert's. Yet it served, and if her pretensions had been moderate she might have lived in reasonable affluence all her life. Her personal fiction was in some fashion more crude than Thérèse's legal fiction. Indeed, Mrs. Chadwick's sensational career of dupery attests chiefly the power of snobbishness. Analyzed ruthlessly, her arguments were simply her glamour as a woman of great wealth and personal fascination, and her legend that she had a sure hold upon a multi-millionaire. Both the appearance and the legend were open to examination, but neither investigation was made. Mr. Reynolds, being unwilling to question a fine lady ungallantly, gladly vouched for securities he had not seen; a dozen bankers declined to rake up a possible scandal. This timidity towards flaunted wealth as represented in Mrs. Chadwick and towards great reputation in her alleged protector is a singular instance of a romantic snobbery prevailing over the impersonal laws of business. Because she so accurately measured the force of this money-worship in the people with whom she had to deal, Mrs. Chadwick must be credited with something like genius. Her actual dealings were vulgar enough; originality lay in her choosing a legend that nobody would want to puncture or even dare to probe.

THE SAINTE-BEUVE CENTENARY.

Sainte-Beuve, a century after his birth and a full generation after his death, is still one of the greatest names. No educated person is wholly ignorant of his position as a critic; nearly all whose culture takes the direction of letters have adventured in the delectable country of the "Causeries du Lundi"; all serious critics and students of literature have made him a patron saint; fairer prospects of literary immortality there could scarcely be. We hear occasionally complaint that he lacked doctrine; moralists cannot forgive him the personal frailties of which they learn chiefly through his own confessions; but people of taste regard him as the most delightful and informing of critics, and nobody outside the great creative writers has more quickly and surely won the suffrages of the judicious. Perhaps this very uniformity of praise leads to incomplete appreciation. Sainte-Beuve himself would have been suspicious of a fame of which all men spoke well. In admiring the product classified and displayed in scores of friendly little volumes, we are too likely to forget the method of its production. We need constantly to remind ourselves that these charming and illuminating essays are only secondarily books—except 'Port Royal,' Sainte-Beuve never wrote anything deliberately as an *œuvre*—but journalism which has borrowed the accuracy and dignity of scholarship.

Everybody has read, probably, the reminiscences of Sainte-Beuve's private secretary, who used every week, by order, to wager at astonishingly favorable odds that the promised Monday article for the *Constitutionnel* or *Moniteur* would not be ready on time. Nobody, perhaps, but a journalist can appreciate the labor that went to the preparation and writing of one such essay a week, and he insufficiently, for most of them involved what a more pretentious age calls original research. And when one recalls those fifteen last years in which this weekly production was continuous, it seems as if that period in the "Causeries" and "Nouveaux Lundis" produced criticism to tip the scale against the whole mass. Those essays, as Professor Saintsbury has shrewdly remarked, are the quarry from which almost all casual erudition of a journalistic sort is drawn; they constitute so much of a world of thought that critics as diametrically opposed as the doctrinaire Taine and the dilettante Anatole France may both honestly claim to find their origins in the "Lundis." It is hard to recall another case in which a large body of journalistic criticism, perfectly adapted to its immediate public, has proved transmutable into literature. In fact, to describe the peculiar achievement of that periodical creator of articles we need a new term, less vague than essayist, less reduced to common ends than journalist. In the term *periodista*, a periodical writer regardless of

the interval, the Spanish have very nearly the true word.

That Sainte-Beuve was a "periodical" of a most extraordinary sort, of a kind possible only in France, perhaps need not be urged at length. Let one consider how intermittent were Lowell's relations with the magazines, or Arnold's, or Pater's. And Sainte-Beuve turned off, week by week, essays not inferior to Lowell's "Dante." Possibly, we may best understand Sainte-Beuve by regarding him as a literary historian, caught young enough to master journalism, but mature enough not to be mastered by it. For, while he painfully learned the trick of writing for the waiting press, he never acquired the impatient habit of mind of the average journalist, nor descended to the conventional short cuts of the trade. The result is that the articles produced under the conditions of stress, so amusingly described by his private secretary, have the tranquil charm of the study and the perfume that haunts the leisure of alcoved libraries.

To account for the success of Sainte-Beuve one has only to reflect on his easily carried learning, the uniform delightfulness of his style, and the presence in France of a cultured audience for criticism. To account for his great and growing authority is more difficult. It was a position to which he laid little claim; there was small trace of the pontiff in his moral make-up. In fact, his ambition for universal sympathy and his preference for obscure subjects in which there was much to investigate, recover, understand, and explain, remove him far from the pragmatists. His effort consciously was to sympathize rather than to judge. With an intellectual curiosity not less than Montaigne's, he had an almost equal skepticism. And if to the challenge *Que sais-je?* he could have replied with the impressive roster of his essays, no one would have more heartily decried the notion that these were final or authoritative. His very conception of criticism as the unravelling of the individual human mystery behind every set of "collected works" precluded the idea of finality. We have, for that matter, a noticeable dearth of generalization in his works; it has been made a reproach.

The feeling of security in his essays, which one by no means finds in the more brilliant series of Jules Lemaître and Anatole France—his disciples, in a way—seems to rest, then, upon the perfect balance of appreciation and judgment. To appreciate with him meant not a contact just sufficient to produce an emotion—the true impressionist way—but it meant experience of all the emotions the subject was capable of producing. To this first stage he brought a singular open-mindedness, an Abraham-like respect for the unaccredited stranger at his tent-flap. And judgment with Sainte-Beuve meant not the application of general axioms, but simply the gradual adjustment of the subject in hand to his well-stocked mind. His task was merely to ascertain the place of any new object in his mental cosmos, and that was almost as inclusive as the world of Western thought. Thus, to repeat a very necessary distinction, his authority, while absolutely personal, was not impressionistic. He prevails not by ostentation of brilliant personal caprice, but by virtue of an experience and a character so exceptional as to carry authority. Perhaps no other writer has upheld the dignity of the critic's function with so much dignity and geniality. It is rarely given to be so uniformly right and with so little self-consciousness.

One is glad to recall, also, that Sainte-Beuve had his fling—a not very edifying green sickness—in poetry. That blunts the edge of the common taunt that the critic is a creative artist *manqué*. It is the sign that the critic, too, possesses the creative temperament, and is merely different from, not really other than, the poet or painter whose work he illuminates. But perhaps the more immediate lesson of the Sainte-Beuve anniversary is the precedent his career offers for the reconciliation of scholarship and journalism. It shows that the student may break the seclusion of his habits without lowering his work to marketplace standards; that literary journalism may be something other than registering the tastes of the day and applauding the notorieties of the moment. Literature has long made Sainte-Beuve her own; journalism, we trust, will one day reclaim him.

THE PAINTER DAVID.

PARIS, November 15, 1904.

Among the art publications of the "Librairie de l'Art Ancien et Moderne" I have noticed the volume devoted to Louis David, the painter, by Léon Rosenthal, professor at the College of Dijon. David has an eminent place in the history of French art, and made a revolution in it which was a sort of reflex consequence of the French Revolution itself. Art is always influenced by the general state of society, and what could be more different from the society of the eighteenth century, which preceded the French Revolution, than the society which followed it? David was the powerful exponent of a great change; he was the painter of the Revolution and of the Consulate. The "Serment des Horaces," the "Mort de Socrate," the "Sabines," "Marat," the "Coronation of Napoleon," the "Distribution of the First Eagles to the Regiments," the portraits of Pius VII., of Madame Récamier, may be considered documents representative of a dramatic period.

Jacques Louis David was born in Paris on the 30th of August, 1748, of a very humble family. He early showed a great disposition for drawing, and was admitted at the age of seventeen to attendance on the lectures of the Academy of Painting. After many unsuccessful attempts, he was admitted in 1778 as a pupil of the French Academy in Rome. He spent there five years, copied the details of Trajan's Column, the statues of the Capitol, and acquainted himself with the remains of antiquity; he also made several views of Rome, of its monuments, of the Roman Campagna. He sent to Paris (in accordance with the rule of the Roman Academy) several pictures and studies; two of the last, "Patroclus" and "Hector," purely academic, he preserved in his studio all his lifetime. In 1779 he sent a "Saint Jerome," and the year after "Saint Roch interceding with the Virgin Mary for the people smitten by the Plague," a picture which had great success and opened to him, on his return to France, the doors of the Academy. Soon after, he exhibited a "Belisarius recognized by one of his old Soldiers," which obtained a sort of triumph.

After the Exhibition of 1781 and his great success, David, then thirty-three years old, opened an atelier and began the initiation of a new school, inspired by the Greek and Roman models and at the same time by the study of the nude model, which had been much neglected in the eighteenth century. In 1783 he exhibited "Andromache Weeping over the Body of Hector, her Husband," a picture which had but half a success, though David always considered it one of his best, There was in it an evident archæological preoccupation, and the great helmet of Hector excited many criticisms. (To this day a certain sort of painting, which is too much inspired by preoccupation with the ancients, goes in the ateliers under the nickname of the *pompier* style, as our firemen wear helmets like the ancient warriors.) The body of Hector was an evident copy of a cadaver, and thus the double inspiration of David became plainly apparent. It shows also in the still famous picture of the three Horatii, in the "Death of Socrates," and in the "Paris and Helena." The "antique" became the fashion, and the eighteenth-century style was abandoned even in sculpture and in architecture. Drawing-rooms were decorated in what was called the "Etruscan" style. The costumes, the head-dresses, underwent a complete transformation.

During the years which preceded the Revolution, David lived quietly with his family, his pupils; he had become a father. He was received in the great houses, and among others in that of the Duke d'Orléans, where he made the acquaintance of Madame de Genlis. When the Salon of 1789 was opened, the States-General had convened, the Bastille had been taken, the young artists were seen in the exhibition in the costume of the National Guard. David exhibited a "Brutus" (the picture is still at the Louvre). Volney, Lameth, Barnave, whom David had met familiarly, had initiated him into the reformatory ideas which they had borrowed from the philosophers; on the 7th of September, 1789, Madame David figured among the ladies who went to Versailles in order to make to the nation a patriotic gift of their jewels.

When it was decided by the National Assembly to commemorate in a picture the famous "Serment du jeu de paume" at Versailles, David received the order for the painting, which was to be placed in the hall of the Assembly. David's preliminary drawing for it still exists, and produces a somewhat ridiculous effect, as all the deputies, in their various attitudes, are represented completely naked; but it shows how David used the naked model in order

to give more truth to the gestures and poses. David became a member of the famous Club of the Jacobins, and an organizer of the popular festivals, and on August, 1792, he was chosen Deputy to the National Convention. He took his seat on the benches of the "Montagnards," the more advanced members of the Convention. He had become intoxicated with popularity, and was among those who voted for the execution of Louis XVI. He went so far as to undertake the defence of Marat against Pétion and the Girondists. He became President of the Convention and a member of the too famous Committee of National Safety. He probably took but little part in its deliberations, as he was not familiar with public affairs, but historically he must bear his share of responsibility for the resolutions of this Committee. He remained to the end an admirer of Robespierre. The 9th Thermidor fortunately brought his political career to a close. He was indisposed and absent on the day when Robespierre was arrested in the Convention; otherwise he would probably have shared his fate.

There is a pathetic drawing of David's made during this period. He saw, from a window of the Rue St. Honoré, the Queen Marie Antoinette carried on an open cart to the guillotine. He drew a rapid sketch which in its simplicity has an awful eloquence; the Queen is in very simple clothes, her hands tied behind her back, erect and majestic to the last, looking prematurely old, and, as the Latin poet might have said, "jam pallida morte futura." The artist overcame the Montagnard; nothing could be more eloquent than this simple sketch.

"There is one point," says M. Rosenthal, "on which one would like to have more light. David has been accused of having been one of the partisans of Robespierre who exercised a direct pressure on the Revolutionary tribunal and provoked the assassination of Danton and his friends. If he really committed this crime, passion and the sincerity of his convictions can alone excuse him. But there is a doubt on the subject, and we can neither absolve him nor excuse him."

M. Rosenthal does not share the sentiments of the historians "hostile to the men of 1793"; he finds it necessary to say so. He cannot absolve what he calls the assassination of Danton, as Danton was one of the "men of 1793." But we need not pay much attention to the political sentiments of M. Rosenthal; we will look upon him only as an art-critic. He acknowledges that the Revolution was too iconoclastic, and applauds David for having on different occasions made efforts to preserve the artistic efforts of the past. He does not much admire the costumes which were drawn by David for the representatives of the people. The theatrical representations organized by him had a ridiculous and childish side, which he feels and even dares to criticise. "In the feast of the 'Supreme Being,' all the citizens and the young boys will have in their hands a branch of oak; the women will be adorned with the colors of Liberty. The mothers will have in their hands bouquets of roses, and the girls will have baskets full of flowers." Robespierre, at this festival, fired with a torch a group representing "the odious monster of Atheism." Many are the drawings of David representing models of new triumphal arches, columns, etc. His influence outlasted the Revolution many years; we can see it in all the official costumes of the period of the Directory, of the Consulate, and even of the Empire. The "Style Empire" was really in great part his creation.

The relations of Napoleon with David began after the campaign in Italy. They continued during the Consulate. It was at the request of Napoleon that David made his picture of Bonaparte crossing the Saint Bernard, "calme sur un cheval fougueux." He made at the same time the charming portrait of Madame Récamier, which, though it is not quite finished, remains one of his best works. David is very remarkable as a portrait-painter; his "Madame Récamier," his portrait of Pope Pius VII., are, so to speak, more than portraits—they are real historical documents, as are the large pictures which he made at the request of Napoleon, "The Coronation of the Emperor and the Empress," "The Distribution of the Eagles by Napoleon at the Champ de Mars." This last picture was finished only in 1808. Napoleon went to David's studio to see it, after the interview at Tilsit. He looked long at it, and, before retiring, he bowed to David, and said: "David, je vous salue!" After the fall of the Empire, a law passed in 1816 against the regicides obliged David to exile himself in Brussels. He died there, from a heart complaint, on the 29th of December, 1825. The Belgian artists gave him a solemn funeral, and he was buried in one of the city cemeteries.

Correspondence.

THE SOLID SOUTH.

To the Editor of The Nation:

Sir: There are some of us more hopeful than Mr. Burnham Wood. The solid South in the last election was not solid merely on a racial question. Many of us who voted for Mr. Parker were voting to get as near individualism as we could get. The South has always been the stronghold of individualism, from the time of Jefferson and Patrick Henry, although in John Marshall she contributed such strength to Federalism as can never be forgot. Although it was an attempt at secession in New England that prompted Jefferson's remark on the benefits of occasional rebellions, the South from the first believed in the truth of those limitations of governmental power which are now relegated entirely to such old-fogy documents as the Declaration of Independence, the Constitution, and the Bill of Rights.

The solid South was in large measure a protest against the iniquity of protection and the embezzlement of the people's private rights by the Government; and the expression of a people whose suffrages had no personal connection with the sinister benefits of our wholesale pension system. If they yet regard benignly that most dangerous of all collectivist bureaus, the Interstate Commerce Commission, it cannot be said that there are not here and there men who appreciate the unspeakably enormous power this appointed board is trying to grasp.

The individualists have certainly been sleeping, lo, these many years; but they begin to awake, and when to this cause we devote ourselves as utterly as the Socialists do, the right shall prevail. There are yet seven thousand in Israel that have not bowed down to Baal. The young men of to-day may be as safely trusted as those of a hundred years ago, and they will make as great sacrifices for liberty.

Very respectfully,

James A. Anderson.

Louisville, Ky., December 6, 1904.

TARIFF CORRUPTION.

To the Editor of The Nation:

Sir: I beg to express to you my great admiration of your strenuous fight against the so-called principle of protection. In my opinion, protection is not a principle, but a fact, and a very strong fact, too, founded on greed and ignorance, which are the greatest powers in the world, and are as strong in this country as in the "effete" monarchies of Europe. I am afraid they are even stronger here, and the battle against this combination seems to be more hopeless here than in Europe.

There is a deep abyss between coincidence and consequence, but I think the connection between our protective tariff, Trusts, monopolies, and political corruption is manifest. The coming election of a United States Senator in the State of Washington promises to furnish an object-lesson. Only millionaires apply. The enclosed article, which was published in the *Spokesman-Review* of November 27, tells the tale. Nobody denies the facts, nobody feels ashamed. "What are you going to do about it?" is the general reply. My answer is: "Nothing; and the highest bidder will get there."

Respectfully yours, E. Schrader.

Spokane, Wash., December 2, 1904.

[The editorial caption for the article mentioned above reads: "Might Auction-off Senatorship: Dr. E. Schrader suggests that the State get the proceeds if office is bartered and sold."—Ed. Nation.]

THE GENERAL STAFF AND DESERTION.

To the Editor of The Nation:

Sir: In your brief reference to General Chaffee's first annual report, in the *Nation* of December 1, appear two or three errors which, I am sure, you will be glad to have corrected.

The General Staff is neither "a self-perpetuating body," nor is it "perpetuated by the general officers comprising it." Paragraph 776 of the new regulations provides that

"all vacancies occurring in the General Staff Corps, excepting in the case of the chief of staff, shall be filled on the recommendation of a board of five general officers of the line, not more than two of whom shall be members of the General Staff Corps, convened by the War Department at such times as may be necessary. The board shall be sworn to recommend officers solely on their professional efficiency and probable aptitude and fitness for General Staff service, etc."

Further along appears the statement that the General Staff "will find plenty of opportunity for brain work in puzzling out the reasons why desertions are so very heavy, and why all the prisons and guard-houses are filled to overflowing with our

military criminals." Desertions are mainly due to the restless spirit of youth, and to the neglect of parents to instil into their sons the obligation of an oath. Old soldiers seldom, almost never, desert. They have learned by the discipline of the service that their oath of enlistment has a meaning. It is, however, a regrettable paradox, but none the less true, that prosperity in the land is liable to work in two ways to the detriment of the enlisted force of a volunteer army like ours. It is liable to lessen the number of applicants for enlistment from the best class of able-bodied young men, and it is liable to induce a desire to get out of the service among the restless spirits, who might otherwise serve faithfully and contentedly through their term of enlistment. Wages outside of the army generally rise and fall with the wave of prosperity, while the pay of the soldier has remained fixed by law. The pay of the soldier ought to be about what the wages of men in his status of life are in civil occupations.

And yet the statement that "all our prisons and guard-houses are filled to overflowing" is an unwarranted exaggeration. The proportion of prisoners is larger than it was wont to be a few years ago, and the cause is not far to seek. The rotten grog-shops, which fringe the outer edge of our military reservations, are the chief cause of it; and all of these have sprung into existence since the "W. C. T. U." combined unwittingly with the grog-shop element and achieved the prohibition of the sale of beer to soldiers at the Post Exchange.—Very respectfully,

M. F. Steele,
Captain Sixth Cavalry.

Fort Leavenworth, Kan., December 4, 1904.

[We had overlooked this very recent change in the regulations. The conditions were as stated a short time ago. In regard to the prisons, General Chaffee's phrase was, that the post guard-houses were "simply crowded to an unsanitary limit."—Ed. Nation.]

A BOOK "GUESSING."

To the Editor of The Nation:

Sir: In view of the recent decision of the United States Attorney-General that guessing contests, where a specified sum is paid for each guess, are illegal, I should like to have your opinion as to the guessing contest proposed by Merrill & Baker, ostensibly to increase the sale of their books. The only condition is that the guesser must buy, for $1, at least one of twenty volumes of the "World's Famous Books," among which are included 'The First Violin,' by Jessie Fothergill; 'Prince of the House of David,' by J. H. Ingraham; and 'Thelma,' by Marie Corelli. In return, he has the privilege of "'predicting' which will be the ten out of the twenty books sold in the largest quantities before January 31, 1905." "It is not necessary that you name the books in the order in which they sell; simply name the ten which sell in larger quantities than any of the other ten." "For every correct list sent in there is a prize of $150." Any number of "predictions" up to twenty may be made, but not more than twenty. With twenty successful "predictions," then, it is possible to win $3,000.

This scheme has received the cordial approval of Dr. William T. Harris, United States Commissioner of Education, and of Dr. Edward E. Hale. Dr. Harris writes: "I am glad you are going to introduce a library of such good books into each family of our land." And Dr. Hale is enthusiastic over this alluring device to get people to purchase good books. "I am much interested in your plan. The only wonder is that it has not been carried out before." In spite, however, of the hearty endorsement of these distinguished gentlemen, it is difficult to see how the scheme differs from the ordinary guessing contests pronounced illegal by the United States Attorney-General. Though each contestant, in return for his dollar, receives an equivalent, in the shape of a "handsome and durable volume, bound in ribbed-silk vellum," he has to solve a problem requiring no skill and no literary judgment, but depending altogether upon chance. The result turns wholly upon the fickle taste of the public and upon the advertising ingenuity of publishers.

Perhaps Dr. Harris and Dr. Hale can enlighten your readers as to the intellectual and moral superiority of such a literary guessing contest. J. M. McBryde, Jr.

University of North Carolina, Chapel Hill, December 10, 1904.

Notes.

A. C. McClurg & Co., Chicago, will publish in the spring 'Beaconsfield: A Romance of Queen Victoria's Reign,' by an Englishman.

The coming Schiller celebrations, marking the one-hundredth anniversary of the poet's death, will include recitals and a performance by Mr. Heinrich Conried and his Irving Place Theatre company at the Harvard Sanders Theatre on January 3, 1905, at eight P. M. "The Song of the Bell" will be "accompanied by orchestral music and by tableaux, by undergraduates, after the series of pictures by Kaulbach."

Last spring we spoke favorably of the privately printed Addresses and other papers of the late President J. C. Welling of Columbian University. A limited sale edition has since been printed especially to supply public libraries, and a few copies remain, which can be obtained of the Riverside Press, Cambridge, at $1.50. The book has not been published, and no more copies will be printed.

That comfortable little series of Trollope reprints, edited by Algar Thorold and published by John Lane, has just been enlarged with 'The Bertrams.' Legible type, filling 830 pages, is not incompatible with moderate bulk and lightness for the hand.

Volumes XII. and XIII. of Miss Hapgood's handsomely printed translation of Turgeneff (Scribners) contain the short stories printed in Volume VI. of the Russian edition of the author's works. More of the same class, including the Prose Poems, fill volumes XIV.-XVI. Miss Hapgood's helpful prefaces continue to accompany each volume.

Our Paris correspondent, on the appearance last winter of Waliszewski's 'Ivan le Terrible,' gave us a *précis* of the work in his fortnightly letter. A translation, 'Ivan the Terrible,' has now appeared from the hand of Lady Mary Lloyd (London: Heinemann; Philadelphia: Lippincott). It makes a compact, typographically too condensed, volume of 431 octavo pages. The translation seems competent, and is not unduly literal and stiff, but it were to be wished the authorities so freely and laudably cited had been not bracketed in the text, but rather put at the foot of the page. The translator has slavishly followed the French transliteration of Russian proper names and other words, and this is a pity; the translation is thereby left incomplete—as much, say, as if "Aristote" had been encountered and not altered to Aristotle. There is a bibliography of seventeen pages, and a fairly good index, though the *vons* are put under V instead of the respective letters of the family name—Buchau, Münster, Solms, etc.

From Brentano's we have a fifth edition, extensively overhauled, of E. A. Reynolds-Ball's 'Mediterranean Winter Resorts,' a handy volume (two in one) for the pocket, somewhat faintly printed, but well ordered and full of precise information for the tourist for health or pleasure. The Balearic Isles are rightly praised, and a plea is entered for an efficient service to Port Mahon in place of the poor steamers from Barcelona or Valencia. The islands are visible from the routes of our Mediterranean liners for Genoa. Among the "principal sights," mention should have been made of the Cartuja, for ever associated with George Sand and Alfred de Musset and the winter they spent together there. There is a good map of the Mediterranean in a side-pocket, but it is not coextensive with the range of the work, which even takes in Khartum as a "potential winter resort."

The title of Agnes Repplier's 'Compromises' (Houghton, Mifflin & Co.), so far as we can make out, fits only one (the tenth, on "The Spinster") of these fourteen brief essays. They range over a rather wide field, from conversation, books, tourists, pilgrims, and the gayety of life, to the more sober reflections inspired by spinsters, executioners, and beggars. In the last essay Miss Repplier forsakes these general themes to relate the story of the short life of Allegra, Lord Byron's natural daughter. Miss Repplier's style crystallized long ago into the neat and graceful periods familiar to her readers. Her short essays are models of their kind, well-rounded, well-groomed, well-furnished with quotations, seasoned with just the right amount of humor, the right number of epigrams, the precise flavor of sarcasm that secures them from insipidity. Miss Repplier can so revive a platitude that the jaded eye will mistake it for a fresh flower of thought. She weaves in her quotations so skilfully that the reader will often fail to perceive that, having set out to read Miss Repplier, he has really been generously entertained with the wit and philosophy of at least a score of writers. It is a triumph of dexterity to quote seven authors in two short pages, to credit each one with his contribution, and with all this to suffuse the whole with one's own personality, which really has had no space to bloom except in the transitional sentences. There are many who would never encounter these jewels of sententious wit if Miss Repplier's

industry had not grouped them together in a modern setting when she had torn them from the old. Hers is not a style that lends itself to quotation by a reviewer; one does not offer a fragment of the setting as a proof that a diamond is well-set. Each little study is an artistic whole, and we can only recommend the volume to all who appreciate the art of writing light essays.

'The Misfit Crown' (D. Appleton & Co.), by Miss Frances Davidge, is the first effort of a young writer. As such it is naturally crude, but shows invention and a certain cleverness that may develop into something more. There is one peculiarity about it, however, which gives it a sort of philological interest, and which will certainly contribute to the gayety of our friends on the other side of the Atlantic, if the book should ever travel so far. The scene is laid in England, and all the characters are English, but they talk the dialect of New York, and on every page may be found expressions that are quite unknown to English people. For instance, Lady Carnifex remarks: "If only one could have *gotten up gall enough* to be eaten by lions"; and the same lady describes a friend as constantly *spatting* with her husband. Now it is safe to say that no English lady would have used either expression, and that no Anglo-Saxon who had not travelled in America could even guess at the meaning of *spat*. When attention is called to the matter, it is surprising how numerous these idiomatic differences are; and the greater frequency of travel nowadays does not appear to foster uniformity of expression between the two branches of the family except within narrow limits.

There is a singular paradox in the attitude of the American people towards foreign missions. The old fervor in saving the souls of the heathen is undoubtedly gone; in its place has come a certain impatience on the part of many or most towards the whole subject. But the movement itself shows no signs of abating. The books produced by it are year by year of a higher class—more sober, scholarly, intelligent; and very soon it may be impossible to put them, as has been done so long, in a division apart, like the late Mr. Fiske's "eccentric literature." That the movement is changing in method and aim seems certain; its leading minds have clearly recognized the situation and have struck into a new path. But the American public, being still in a state of general muddledness as to its interracial problems, has not yet caught the change, and its mental image corresponding to "missionary" continues to wear a black coat and to be an evangelist simply. Among the books destined to lead them out of this, Mr. Robert Speer's 'Missions and Modern History' (Revell) must take an honorable place. Those even who have no interest in missions as such will see their bearing and weight on the historical situations and problems which he here treats. All but two deal with Asia; and in Asia, for the first time for centuries, a non-Aryan race, in a series of pitched battles, has just defeated an Aryan race. That the last attempt of Europe to overrun and hold Asia is either about to fail—as all before have failed—or to suffer an essential change, is clear. It is also clear that Asia is full of new movements and ferments produced or affected by Christianity. The part of Christianity, then, in it all, whether by indirect influence or direct doctrine, is Mr. Speer's subject, and he has handled it very sanely and with full knowledge. He deals largely in quotation, but his authorities are sound, and his book is well worth reading.

In the winter of 1900-1, Prof. Heinrich Schäfer varied his Egyptological labors at the excavations being made for the Berlin Museum at Abusir by writing down a collection of folk-songs from the dictation of the native watchman. The result was one of the best little collections of modern Arabic popular songs which we possess—very short, very pointed, and very significant for the life, thoughts, and customs of the Egyptian fellahin. For a non-Arabist, disclaiming also all musical training, Prof. Schäfer's Arabic text is wonderfully reliable. The whole—Arabic in transliteration, translation, and notes—has now been reproduced very charmingly in English by Mrs. J. H. Breasted ('Songs of an Egyptian Peasant,' Leipzig: J. C. Hinrichs). Her rendering may serve also as a second edition of the German, as it gathers up the results of the reviews, especially the long and suggestive one by Vollers in the *Zeitschrift* of the German Oriental Society.

Socrates Spiro Bey, who has already done good work in his unique dictionary of modern Egyptian Arabic, has just published a 'Note' on the Italian words in the same dialect (Cairo: Al-Mokattam Printing Office). Dedicated to the lamented Prof. Willard Fiske, it shows the system of transliteration derived from Spitta and approved by him, and, although a simple vocabulary—Arabic text, transliteration, meaning, Italian original—is a most creditable breaking of ground in a new field.

The question of expense played a very small part in the publication of the monograph on 'The Tomb of Thoutmosis IV.,' which contains the results of the excavation of that king's tomb by Mr. Theodore M. Davis of Newport, Rhode Island (London: Archibald Constable & Co.). The work was undertaken in January, 1902, and was most systematic and thorough. It was under the superintendence of the Inspector-General of the Services des Antiquités, Mr. Howard Carter, who furnishes the introduction, an account of the discovery of the tomb and the removal of its contents. Associated with him in his work as represented in this stately volume was Mr. Percy E. Newberry, whose name is already widely known in connection with the work done in years past for the Egypt Exploration Fund. Others also have been impressed into the task of preparing a model volume. Dr. Gaston Maspero, whose name is a synonym for Egyptian archæology, has contributed an essay on the king's life and monuments, and Dr. G. Elliot Smith, professor of anatomy in the Egyptian Government school of medicine at Cairo, gives in great detail an account of the results of a searching, even a microscopic, examination of the physical characteristics of the mummy which is preserved in the Cairo Museum. Following and completing all is a detailed catalogue of the objects found in the tomb, with careful measurements, exact descriptions, and numerous half-tones and woodcuts illustrating nearly all of the objects. From the foregoing it will be evident why the volume is to be characterized as a model in conception and execution. It places in the hands of the learned world of specialists a transcript of all the important and pertinent facts, and representations of the objects which the investigator desires to see and handle. Next to physical examination of the objects themselves is such a volume as this, an *édition de luxe* in its field.

The Library of Congress issued for the St. Louis Exposition three small pamphlets of "Notes," describing the work of the Library, its exhibit, and the special exhibit of the Catalogue Division. The last-named contained an account of the catalogues, classification, and card-distributing work of the library, and this has, together with circulars which initiated the work, been reprinted as Bulletin No. 7 of the Card Section. It appears that about three-fifths of the cards sold are on order by author and title, the subscribers in most cases not knowing beforehand whether cards for the books in question may be obtainable or not. In other cases cards are ordered by serial numbers, which have generally been obtained from the proof-sheets distributed by the Library of Congress to a number of other libraries. Another way to subscribe, namely, by subjects, is used, not only by libraries having special collections, but by individual subscribers, specialists, and bibliographers, as well as by commercial firms. Bulletin No. 8 gives a list of subscribers to printed cards, including such individuals as have deposited $3 or more for cards. These, with a few commercial firms, number 30, out of a total of 420 subscribers.

The 'Naturgeschichte der Menschen' of Dr. Stratz (Stuttgart) bears the subtitle "Grundriss der somatischen Anthropologie." It is thus one of the first treatises on Man to employ a convenient and apt term likely to come in vogue. Stratz is one of those who contend for the importance of measurements and photographic reproductions of the proportions of the living human body as distinguished from the study of its anatomy and internal structure. He is known as the author of 'Die Schönheit des Weiblichen Körpers,' 'Der Körper des Kindes,' and other works constructed along similar lines. In conformity with his idea, he has devoted much space to the canons of proportion and growth, and has illustrated them very graphically with diagrams and well-selected photographs. He is also a careful student of the work of his predecessors, and presents an admirable brief account of the history of anthropological research, of embryological development, etc. His diagrams, often colored, very clearly illustrate such points, for example, as the differences between the crania of man and the anthropoids; between the crania of Spy, the *Pithecanthropus erectus*, and the orang, and the like. The chapter on rudimentary organs profits by pertinent illustration to a degree rare in anthropological works; and that on the races of mankind draws its types from the best available photographs of such men as Fritsch, Hagen, Günther, and Nieuwenhuis. The colored race and language-charts are also models of their kind; and the print and get-up of the volume are of a correspondingly high order. For an English public some modification of taste in the selections is desirable.

A valuable contribution to our knowledge of the life and character of the distinguished Munich artist recently deceased is the

volume entitled 'Franz von Lenbach: Gespräche und Erinnerungen,' edited by W. Wyl (Stuttgart). The material is derived from conversations, reminiscences, and occasional letters, in which Lenbach gives expression to his views with the rather reckless freedom and rude sincerity for which he was noted. In the early part of his career he was employed by Count Schack at a fixed salary to copy masterpieces of Italian and Spanish painters for the Count's well-known picture gallery in Munich, now the property of the German Emperor. In these communications Lenbach speaks very disparagingly of Schack, not only as a connoisseur, but also as a patron of art. The first allegation may have some foundation, although in this case the decision is determined more or less by individual taste; but the assertion that he showed a lack of proper appreciation and corresponding liberality as a Mæcenas in the province of art is groundless, and is refuted not only by the testimony of other artists in the same position, but also by the letters of Lenbach written at the time, in which he expresses his gratitude for Schack's munificence, manifested repeatedly by the increase of Lenbach's salary without the slightest solicitation on his part. That the patron may have expressed his admiration of paintings which Lenbach regarded as of no great value, is possible, but he was certainly neither narrow-minded nor niggardly in his relations to the artists whom he employed as copyists.

In a characteristic speech at the opening of a Carnegie library at West Calder, Scotland, Lord Rosebery dwelt on the limitations of book knowledge and the dangers of too much reading. Referring to the writers of old who were being buried under the "enormous shower of books" which every year fell upon the earth, he said: "In literature they needed one who should act the part of the muezzin on the tower of the mosque summoning faithful Mahommedans to prayer—one who should raise his voice and recall the names of good books and good authors that stood in danger of being forgotten." And, acting on his own suggestion, he closed by saying "that if they wanted mental refreshment, and to take large, broad, and generous views of life, they should drink deeply of the draughts of eloquence, wit, and common sense furnished by the works of Sydney Smith."

The completion of the Orenburg-Tashkent railway is an event of both commercial and strategic importance. It follows for thirteen hundred miles the old caravan road over which for two centuries the Bactrian camels brought the silks of Khiva and the carpets of Bokhara to Europe, and brings the cotton-growing region of Central Asia into direct communication with the Moscow mills. Up to the present time the product of these cotton plantations has not been able to compete with American or Egyptian cotton, partly from its inferior quality, but mainly from the cost of transportation. This obstacle to the development of the industry is now removed, and a correspondent of the London *Times* states that there is a great improvement in the preparation of the crop, through cleansing machinery purchased in the United States. "New and better plants have been grown from imported seed." The strategic importance of the new railway, which will be opened for passenger traffic in July, 1905, lies in the fact that it brings Central Asia into direct communication with the heart of the empire. Tashkent, henceforth, will be the "advanced base of the Russians in Asia." The railway is the creation of the Russian Minister of Public Works and Railways, Prince Khilkoff. Of him the correspondent says that, imitating the example of Peter the Great at Zaandam, he worked in America as a plate-layer. He also learned there the value of time and truth, so lightly estimated by the mass of his countrymen.

The first congress of the International Society for Surgery has been called to meet in Brussels in September of next year. The programme has already been announced, and will cover the leading problems of the day in this department of research. Only members of the Association are expected to participate. Specialists from Berlin, Berne, Vienna, Leipzig, and other medical centres have promised papers. Professor Kocher of Berne is the chairman of the Congress.

A special international commission, consisting of Sir Richard Jebb, Professors Diels, Gompers, Heiberg, Krumbacher, Leo, and Perrot, with the first-mentioned as chairman, was appointed by the General Convention of the International Association of the Academies of Sciences, at its London meeting, to take the preliminary steps looking toward the preparation of a Thesaurus of the Greek language, on a scale to correspond with the Latin Thesaurus now preparing by the Berlin Academy. The project is principally advocated by English scholars. The Germans declared that for the present they could contribute neither aid nor money, as they were sufficiently occupied with the Latin Thesaurus. Krumbacher of Munich contends that the limit proposed by the English scholars, viz., 630 A. D., for scientific and practical reasons is untenable, as it ignores the Byzantine period.

The Institute of International Law, recently assembled in Edinburgh, decided to hold its next convention in Ghent, with Professor Rolin of the University of Ghent as presiding officer. The Institute passed a resolution expressing a wish that the different states would discuss the questions connected with the neutrality problem, and effect an agreement in harmony with the needs of the times.

The Massachusetts Historical Society, at its recent regular meeting in Boston, on Thursday last, December 8, voted to place the name of Prof. Goldwin Smith on its Honorary Roll. It has already been stated in the *Nation* that, under the rules of this Society, its Honorary Roll is limited to ten names, those upon it being carefully selected on grounds of historical writing or research, and all men of international reputation. At the November meeting of this society Mr. John Morley, since 1891 a Corresponding Member, was, in recognition of his Life of Gladstone, made an Honorary. Professor Smith has been for forty years a Corresponding Member, having been chosen in 1864, on his first visit to the United States. He is now in his eighty-second year. His is the ninth name on the Roll, those preceding him being Professor Masson, Carl Schurz, Mr. Bryce, Sir G. O. Trevelyan, Professor Villari, Henry C. Lea, Professor Harnack, and Mr. Morley. This noticeable list is fairly well distributed as respects nationality; but the absence of any representative of France is somewhat surprising, in view of the preëminence of the French school of historical research. The names of Sorel, Gaston Boissier, Lavisse, and Hanotaux spontaneously suggest themselves as worthy to fill the one remaining vacancy in the Roll.

Dr. William Everett writes to us:

"In reply to my lively and generous critic in the last *Nation*, I would ask him to turn to page 25, and see if I have wholly neglected the patriotic odes of Petrarch. He has been only too gentle with misprints for which I am responsible. Especially on page 225, three lines from the bottom, *Even so* is misprinted for *Nor do*. Neither have I any excuse for misplacing Recanati. I am very glad to be wrong about Carducci's death; an error into which I was led by one of our first *Italianisti*. Will the reviewer believe me when I say that I never read Goethe's 'Tasso'?"

—If writing the lives of men of letters causes their works to be read, we may heartily welcome Mr. Francis W. Hirst's 'Adam Smith' (Macmillan). The restoration of privilege has gone so far as to make timely the counsel which Smith offered to his generation and which ours has sadly neglected. It is true, as Mr. Hirst says, that Mr. John Rae's 'Life of Adam Smith' left little for his successors to glean. The discovery of a copy of Smith's lectures, which Mr. Cannan edited and published in 1896, was of importance to scholars. It showed that Smith had not neglected the theory of consumption, and threw much light on his intellectual methods. Nevertheless, we think that we owe the present book to the necessity of including Adam Smith among "English Men of Letters," rather than to any demand for information concerning his life and work. However this may be, Mr. Hirst has performed his task in many respects extremely well. He is a clever writer, and he has made a very readable book. His exposition of Smith's ethical theories, as well as of his economic doctrines, is not beyond criticism. Leslie Stephen, for example, calls attention to several points that Mr. Hirst scarcely appreciates. Nor can we deny that to many —although not to us—Mr. Hirst's praise will seem occasionally undiscriminating, if not extravagant. But, on the whole, the sketch is true and strong. We get a clear impression of Smith's personality; and, considering the dearth of material, a remarkably full account of his private as well as his professional life. Those who are familiar with both his works and his career will not be unwilling to accept this new appreciation; and those who are not, may well use it to make the acquaintance of one who was as estimable as a man as he was great as a philosopher.

—When Major Martin Hume writes on 'The Courtships of Queen Elizabeth' and 'The Love Affairs of Mary Queen of Scots,' he does not approach these subjects from the side of romance. He is a political historian for whom marriage negotiations are important as affecting the action of States. 'The Courtships of Queen Elizabeth' we noticed on its appearance, but in the revised edition (McClure) there are two fresh chapters of a somewhat different character from the body of the work. In these, Major Hume, at the request of various correspondents, takes up Elizabeth's private morals, and discusses them from a biographical rather than from a political

standpoint. The Queen's relations with her own courtiers, particularly Leicester and Hatton, gave rise to contemporary scandals, which spread widely through England and the Continent. Simier, the Duke of Anjou's agent during the period of his marriage negotiations with Elizabeth, was also brought by gossip into the circle of her unlawful lovers. Major Hume, after a recital of the evidence in various cases, inclines to exonerate the Queen from the charges of misconduct so frequently brought against her. Of the separate subjects treated in these new chapters, the most interesting relates to an alleged son of Elizabeth and Leicester. Floating rumors of such a personage are not infrequent, coming, among other places, from Venice; but Major Hume, since he published the first edition of this book, has found at Simancas a detailed and circumstantial story. In 1587, just when the Armada was being equipped, a young Englishman, dressed as a pilgrim, was arrested in northern Spain within a short distance of the French border. Charged with being a spy, he said that his name was Arthur Dudley, and that he was a son of Elizabeth and Leicester. Philip II.'s English secretary at this time was Sir Francis Englefield, and when the prisoner was brought before him he had the whole story set down in writing. It was a narrative which occupies five pages of Major Hume's book, and contains a number of plausible statements. Whoever made it had been coached for the purpose, even if the tale be thought fictitious. The man, however, was probably a spy who thought it safer to be prepared with some kind of a story in case of arrest. We can hardly believe that Elizabeth, Leicester and Walsingham would have permitted a genuine Arthur Dudley to wander about telling stories of the kind just indicated. Walsingham, for instance, had an excellent corps of spies, and generally knew what was going on both at home and abroad. But Elizabeth, even if she was all she claimed to be—*virgo virginum præclara*—had a great talent for sailing close to the wind.

—The fifth volume of the 'History of North America,' edited by Dr. Guy Carleton Lee (Philadelphia: Barrie), bears the title of 'The Colonization of New England.' It is ground of offence to some that the story of New England origins has been told so largely by New England men, and that the share of the New England colonies in the making of America has been so insistently dwelt upon. Dr. Lee, whose prefatory remarks suggest that he is himself not wholly a stranger to this feeling, has entrusted the New England volume of his series to disinterested hands, in the hope of thereby securing a juster appraisal of historical values. We do not discover, however, that the author of the volume, Prof. B. B. James of Western Maryland College, has produced a work which will startle any New England reader, or change materially the general estimate of the significance of the New England colonies in American history. The book before us is a well-written, and, as a whole, well-proportioned popular summary of New England history, from the day of colonial beginnings to the eve of the Revolution. The problem of giving an impression of unity to the annals of half a dozen different colonies, or groups of settlements, whose several developments were very unequal and whose careers often had no common motive, is certainly difficult; but we are disposed to credit Professor James with a success, in this particular, at least as great as that of any previous worker in the same field. As regards the selection and presentation of facts, too, that in general calls for no adverse comment; the story has been told many times, and one may not demand great originality of a popular narrative. We must note as substantial limitations, however, the slight attention paid to governmental and administrative topics, such as political methods, taxation and expenditure, the land system, and the Indian policy; to the organization and government of the Church; and, particularly in Massachusetts, to the development of clerical influence. The account of the Roger Williams episode in Massachusetts, especially in its later phases, is so brief as to convey no adequate idea of its significance. A similar judgment of inadequacy, so far as allotment of space is concerned, must be passed upon the treatment of the Seven Years' War; and we miss a clear exposition of the economic situation which, from the beginning of the eighteenth century, laid in large part the foundation for revolution. It may be that some of these omissions are to be supplied in later volumes of the series; if so, they will be less serious blemishes in this one. The volume, like its predecessors, is liberally illustrated, chiefly with portraits, though the pictures continue to be distributed with little regard to the subject matter of the text.

—The hundredth anniversary of the birth of the distinguished German philosopher Ludwig Feuerbach, who was born July 24, 1804, and died September 13, 1872, is being worthily commemorated by a new and complete edition of his works in ten volumes prepared by Professors Wilhelm Bolin of the University of Helsingfors and Friedrich Jodl of the University of Vienna, and published by F. Frommann in Stuttgart. Three volumes have just appeared, and the others will soon follow. In 1891 Professor Bolin published a work entitled 'Ludwig Feuerbach, sein Wirken und seine Zeitgenossen' (Stuttgart: Cotta), in which Feuerbach's importance as a thinker and his influence on contemporary ideas and on the evolution of modern philosophy are clearly and consecutively set forth. He has now issued as a centenary memorial two volumes of letters written by or to Feuerbach, and covering a period of more than fifty years (1820-1871), and preceded by a biographical introduction of 211 pages, in which the personality of Feuerbach, the most prominent features of his character and the general course of his intellectual development, are admirably portrayed. The letters are carefully selected, and serve as an excellent elucidative supplement to the biography ('Ausgewählte Briefe von und an Ludwig Feuerbach'; Leipzig: Otto Wigand). A highly attractive and suggestive treatise is also Professor Jodl's 'Ludwig Feuerbach,' which forms the seventeenth volume of a series of monographs entitled "Klassiker der Philosophie," edited by Professor Falckenberg of Erlangen, and published by Frommann in Stuttgart. It is a succinct and singularly lucid exposition of Feuerbach's philosophical system, the psychological problems which he sought to solve, his views of the origin and essence of religion, and his conception of anthropology as the key to theology.

—For three generations, embracing the greater part of the nineteenth century, the Feuerbachs held a prominent place in German science, literature and art. The first to render the name distinguished was Paul Joseph Anselm Feuerbach, an eminent jurist, especially in the department of criminal law. Of his five sons, the oldest, Joseph Anselm, was a well-known philologist and archæologist; the second, Karl Wilhelm, acquired distinction as a mathematician; the third, Eduard August, devoted himself to jurisprudence, and the fifth, Friedrich Heinrich, to the study of Oriental and modern languages. Of the later descendants, the artist Anselm, son of the above-mentioned Joseph Anselm, became noted as an historical and *genre* painter, and died at Venice, January 4, 1880, in the fifty-first year of his age; his biography by Julius Allgeyer appeared in 1894, and was duly noticed in these columns. Of all the members of the Feuerbach family the fourth son, Ludwig Andreas, the philosopher, has become the most celebrated, and exerted the most powerful and permanent influence on his contemporaries, and especially on the intellectual tendencies of the present day.

—Again we have to record the death of an old and valued contributor to the *Nation*, John White Chadwick, who passed away on December 11, almost at the very close of the fortieth year of his pastorate with the Second Unitarian Church of Brooklyn. His connection with this journal began in volume one, with a notice of the Life of Edward Irving; and his latest printed review was of Ward's Life of Aubrey de Vere six weeks ago. In the vast body of his writing between these two extremes, biography was always a favorite field, concurrently with the religious evolution on both sides of the water. He was at home alike with the Concord Transcendentalists and with the leaders of the Oxford Movement. Not less he was in sympathy with the anti-slavery and allied reforms. The range of his knowledge and his interests was thus uncommonly wide, and was maintained and enlarged by prodigious industry in reading. In spite of his weekly sermon and his pastoral cares, he never refused welcome to a new book, and his services as a reviewer were far from being monopolized by the *Nation*. In theology he belonged to the liberal wing of his denomination, and his biographies of Theodore Parker and of Channing are part of his enduring monument as a sectarian and man of letters. He was, besides, a poet worthy of the Essex County muse, if not in the front rank, and his collected verse has met with wide acceptance, while the anthologies have not failed to give him a place in their bede-roll. A native of Marblehead, born October 19, 1840, the son of a sea-captain, his poetry was tinged with wave and shore; but his summer home was at Chesterfield, in the hill country of Hampshire County, Mass., and his metrical expression had, like Freedom, two voices, one of the sea, one of the mountains. Mr. Chadwick's life was as full as it was uneventful. His education was at the Bridgewater Normal School, at Exeter Academy, and at the Harvard Divinity School, from which last he went straight

to his long ministry. Persistency was stamped on his frank, honest, weather-beaten, sailor-like countenance, and that joy of lively occupation which he enforced in his "Carpe Diem." His very manner was breezy. Every faculty was alert, and what he did was done ardently and energetically. His nature was tender as became his vocation, but courageous, holding nothing back in his messages to his people, in times of deep political feeling when the pulpit and the pews were not always in accord. He spoke consistently for freedom—of the mind and in public conduct; against oppression, privilege, and corrupt government. In this he was at one with his friend and country neighbor, the late George William Curtis. In 1888 Mr. Chadwick received from Harvard the well-merited honorary degree of M.A. Of the three ports of Birth, Life, and Death figured in his "Sealed Orders," he has now entered the last, suddenly, but not without a year's premonition, and also serenely, without misgiving; and pausing for the first time in the work which his hands found to do with a high and lasting beneficence.

PRINCESS RADZIWILL'S MEMOIRS.

My Recollections. By Princess Catherine Radziwill. James Pott & Co. 1904.

It must have given the authoress great pleasure to jot down her varied and interesting Recollections, as it gives the reader pleasure to peruse them. But one cannot help wondering whether the wiser and more satisfactory plan would not have been for the Princess to devote more time to the undertaking, tell the entire truth about all the interesting people, royal and otherwise, whom she has known, in detail, and the political secrets into which (as she frequently suggests) she was initiated, and then leave the record to be published at a discreet interval after her death. In that way she would undoubtedly have reaped a rich harvest of posthumous fame, of a quality which is perforce now denied her. Such a volume might have taken high rank among the celebrated contributions to history from individuals endowed with exceptional ability, powers of observation and expression, and opportunities for getting behind the scenes in the highest society of all countries. As it is, she is, in a way, compelled to apply to nearly every one she mentions all the flattering adjectives in her Book of Synonyms, which produces a rather deadening effect upon the reader, and evokes incredulity, as well as a mental query as to her object in writing the book at all.

By birth and marriage the Princess had access to the highest spheres. Her paternal great-aunt was the wife of King Stanislas Leszczinski, whose daughter became the wife of King Louis XV. of France. Her husband's paternal grandmother had been a Princess of Prussia, a niece of Frederick the Great. Through marriages of her own relatives and of the great and prolific Radziwill family she is allied with the most prominent houses in all countries of the Continent. These alliances, added to the important official posts held by relatives, brought her into close touch with the most highly-placed personages and the most interesting political events of her day. Moreover, one of her aunts married a French author, M. Jules Lacroix, brother of the famous "Bibliophile Jacob," and had a famous salon in Paris, where the celebrities of Europe were wont to congregate. Another aunt was the Madame Hanska whose correspondence with Balzac—whom she afterwards married—is famous. The Princess narrates the romantic circumstances connected with the marriage, chiefly for the purpose of correcting "the many untruths which have been written about it." She says of her aunt:

"She has gone down to posterity as the woman whom Balzac loved, whilst she deserved to have been known as the one being to whom he was indebted for the development of his marvellous genius, and also as his collaborator in many of his works. For instance, the novel called 'Modeste Mignon' is almost entirely written by her pen, and certainly some of her husband's best books have had something or other added to them by her hand."

Of her aunt and Balzac she gives interesting details, and, as she often visited both the aunts in Paris, she came into contact with literary as well as with fashionable society.

Married, at the age of fifteen and a half years, to Prince Wilhelm Radziwill, the Princess took up her residence at Berlin in the old Radziwill Palace, since bought by the State, which sheltered an enormous family, all of them more or less uncomfortably, and began her career of observation behind the scenes at a most interesting period, the year 1873. Special facilities were afforded by the fact that Emperor William I. had, as a young man, been deeply in love with his cousin, the aunt of the writer's husband, and "always looked upon her family with eyes different from those with which he looked upon the rest of the world." Hence frequent invitations to the most select and intimate royal functions, whose dreary monotony and stupidity the Princess vividly describes. She became a stanch friend and enthusiastic admirer of the Empress Frederick, whom she calls alternately by that title and by the title of "Crown Princess," after her accession to the throne, as she has previously called William I. and his wife both "King" and "Emperor," "Queen" and "Empress," respectively, in the same sentence, often with bewildering results. In the latter case, a certain reason for the practice is furnished in an anecdote which represents the Emperor William insisting on calling his wife "the Queen" to his son, while the latter, with equal obstinacy, persisted in referring to her as "the Empress." However, as a rule, the Princess's English is wonderfully accurate and expressive, while her talent for vivid portraiture of personalities is of a very high order, and her powers of psychical analysis are quite extraordinary. Of the Emperor William I. she says:

"In spite of all his gentleness and genuine amiability, the old Kaiser was at heart a furious autocrat, and did not brook contradiction even to the smallest extent. . . . He was certainly one of the most remarkable monarchs of the century, and, with abilities which did not rank above the average, he contrived, only through his sense of duty, to achieve far greater results than even Frederick the Great, with all his genius, had performed. . . . I do not think, in spite of Prince Bismarck's memoirs, or of the Crown Prince's diary, that the public at large has realized the extent of his ambition. He was, without doubt, covetous of his neighbors' possessions."

And with regard to the situation after 1870 she says:

"If Bavaria, Wirtemberg, and the different minor States of South Germany could have been swept away, as was the kingdom of Hanover in 1866, he would have been delighted to cover himself with the purple of the Cæsars, but it jarred upon his nerves to find he had, if only in appearance, to share his authority with other monarchs whom he secretly despised. In this respect the Crown Prince resembled his father, but in a different way. . . . Whilst the old Emperor was always conscious of the dignity of the crown, his son thought more about that of the wearer of it."

In speaking to the Princess about the results of the Berlin Congress, the Emperor told her that he "had been horrified at the emancipation of the Jews in Rumania." Of the Emperor Frederick she says:

"He was everything that is noble, everything that is good. . . . His political abilities have been discussed. It is certain that he had not the proud conviction of the nobility of his mission which distinguished his father, nor the brilliancy which characterizes his son, but he had a rectitude of opinions and a sound common sense which would have carried him through any difficulty, public or private."

The writer's characterization of Bismarck, which is one of the best in the book, is too long even to summarize, but she narrates one striking instance of his methods, which occurred in her connexion. The Chancellor suspected some members of her husband's family of intriguing against him. He did not dare attack them openly without positive proofs which he could lay before the Emperor; and such proofs it was next to impossible to procure. Accordingly he adopted the expedient of a domiciliary visit from the police. Under the pretext of searching the papers of the secretary to her brother-in-law (who was a highly respected and influential member of the Reichstag as well), the police took possession of the room in the Radziwill Palace where the secretary worked, and examined all the papers of the Princess's brother-in-law and cousins.

Equally interesting with the Princess's memories of life in Berlin are her memories of Russian life and affairs. Born a Countess Rzewuska, and Polish by blood on her father's side, she was Russian through her mother and her own birth; while her husband, also of Polish extraction, became naturalized in Russia in the eighties. Through her exalted connections at the court of Russia, as well as owing to her own beauty, sparkling vivacity, and charm (of which her attractive portrait as frontispiece conveys no conception, and which she does not mention herself, of course), she had access to all that was best and most interesting in Russia. Her brother was one of the Russian officers who joined the insurgents in the Servian and Montenegrin revolt of 1876. Neither the Emperor, Alexander II., nor his counsellors wished for the war which followed the short-lived enthusiasm for their cause in Moscow and the country districts. All the officers who went to the insurgents, she says, "came back more or less disgusted with their cowardice and untrustworthiness." But by that time it was too late; war had been declared, and the waning enthusiasm was rekindled. We in America can fully appreciate the situation of having the Government forced into war. Fired by enthusiasm for rescuing their fellow-Christians, the army was profoundly

disappointed when, at San Stefano, already within sight of Constantinople, it was forced to retreat, and lose all for which it had so valiantly fought.

"They lost every confidence in their sovereign," says the writer, "as well as every affection for him. They made him personally responsible for this ruin of their fondest hopes. . . . Nihilism and anarchism became a possibility from that day. . . . I really believe—and I am not the only one who does so—that had a kind Providence removed Alexander II. on the morrow of the war, Nihilism would never have spread in the way it did, or, at least, would not have been sympathized with by so many people. It proceeded more from dislike of a particular sovereign than from hatred of the monarchical system. . . . His reign had begun in such a burst of enthusiasm, had been hailed with such hopes, that it was bound to become a burden to all those who had prophesied that it would be one of the greatest in Russian history. From the moment people realized that their desires could never be fulfilled, the Emperor was doomed. . . . He had, sooner or later, to fall a victim to the hopes he had raised. . . . At heart, he had never intended to grant to his people the liberties of the nations which are constitutionally governed."

In short, the writer attributes the Emperor's assassination chiefly to the Russo-Turkish war, with its immense expenditure of blood and treasure, for the eventual benefit of England primarily, and Germany in a secondary degree—to the total exclusion of Russia. But it must be observed, with regard to the final assertion which we have just quoted, that she contradicts herself two pages further on, and says: "It is certain that the granting of a Constitution had been decided upon by the Emperor, his wife, and Count Loris [Melikoff]. The document was prepared and signed, and was to be made public on the declaration of the sovereign's marriage" (to the Princess Dolgoruky, afterwards known as Princess Yurievsky). The Princess quotes her father as having told her what Nicholas I. had said to him a few days before his death, when he already knew that the end was approaching. "It was to the effect that his son, should he launch into the reforms he projected, would not die in his bed, but perish under the knife or ball of an assassin." She adds that, very soon after the Emperor's marriage to Princess Dolgoruky, and the elevation of her children to be Serene Highnesses, "rumors went round that the new consort of the sovereign was going to be publicly recognized as such, and crowned solemnly at Moscow. Whether this rumor, which I believe was well founded, would have become an accomplished fact or not, I cannot, of course, tell; but it is certain that if it did not lead to the catastrophe of March 13 [the assassination of the Emperor], it mitigated a good deal of the horror which followed upon its execution."

The first winter the Princess spent in St. Petersburg was that of 1881, and from that time on there is much that is of interest about Russia and its prominent men in her memories. She was present at the coronation of Alexander III., and takes occasion to correct various inaccuracies of Mme. Waddington's account of the festivities on that occasion. She also describes the wedding and the coronation of the present Emperor and Empress of Russia, and expresses her opinions of their characters, as well as of the characters of many persons and events connected with them, interspersed with memories of her journeys to Turkey, Egypt, England, France, and Germany, and sketches of the statesmen and prominent women whom she met. In conclusion, she gives (by request) an "appreciation" of the late Cecil Rhodes, which must prove of value to the students of character in general, and of his rather puzzling nature and career in particular. She refrains, until a later volume, from a narration of her meeting and connection with him, which resulted in so much trouble for her. One is struck by her apparent fairness, even generosity, under the circumstances, in her description of him.

"In spite of all the harm he has done me," she says, "it is impossible for me to mention his name with anything but admiration for the great talents as well as the magnificent qualities which made him such an exceptional creature, and I would like to give him, or rather his memory, a last proof of affection by showing him as he really was, with all his faults and all his good points, a man of extraordinary talents who, under different circumstances, might have risen to those heights where, according to the Russian poet's words, 'one gets so near to God that one begins to understand him.'"

She considers that the bane of Rhodes's life was that he never knew who were his real friends, and allowed himself to be influenced by interested and unscrupulous people. His great weakness, she says, lay in his inability to own himself in the wrong. "He had a character so complicated that I doubt whether any one has really understood it, or whether he understood it himself." In fact, like the rest of her narrative, this chapter is of extraordinary interest. On the whole, it may be said that, while the book hardly rises to the level of the greatest historical memoirs, its author has all the talents required for producing such a work, if she should deem it expedient to adopt the requisite attitude towards her material.

THACKERAY IN AMERICA.

Thackeray in the United States: Including a Record of a Variety of Thackerayana. By James Grant Wilson. New York: Dodd, Mead & Co. 1904.

When, in 1852, Thackeray made his first visit to this country, he had only ten years more to live. Those ten years, certainly the happiest and most brilliant of his life, owed much of their happiness to his friendships with Americans, and much of their ease to the profits of his American lecturing tours. Thackeray had the art of spending money fast. He loved all that the epicure in life appreciates; the society of the rich, because with them the machinery of life ran with the least friction; good wines, good dinners, which he found it even more pleasant to give than to receive; the luxury of drawing a check rather larger than he could afford, to set some poor devil on his feet. All this was necessary to his sensuous temperament and his profound sensibility. But, in the last decade of his life, when repeated attacks of illness warned him that his working days were numbered, he was possessed by a single thought—how to secure a comfortable provision "for the girls when I die." That is the pathetic phrase which crops up in so many of his letters, and it was to satisfy that ambition and to lay the ghost of that terror, poverty for his daughters, that he undertook the hard and distasteful business of public lecturing. Fortunately, it did not kill him, as it killed Dickens, and, with the clear profit of $30,000 which he gathered in America, he could make his own terms with publishers, build himself a house, and enjoy the present, for all its continued hard work.

In these two sumptuous volumes Gen. Wilson has collected from the journals of the day, from various letters, and memoirs of Americans who entertained Thackeray, and (most interesting source of all) from the letters of Thackeray himself, a very thorough and detailed account of the two American visits. The first volume is devoted to the two winters spent by the novelist in America; the second, to his last years in London, when he was still in touch with the friends who had been so lavish of their kindness and hospitality. Gen. Wilson has the Herodotean cast of mind. He loves the byways even more than the main road, and never loses an opportunity for a digression. It is chiefly that tendency to digress and tell an anecdote, with a perfect indifference to its relevancy provided only that it is entertaining, that makes the first volume such agreeable reading.

Thackeray's first crossing was shared by James Russell Lowell, fresh from his first visit to Italy, and by Arthur Hugh Clough, the poet. Thackeray landed in Boston, and there delivered his lectures on the English Humorists. Boston reminded him of Edinburgh, and he found the literary society there "very good indeed." He thought the life of New York "simpler and less pretentious" than that of the other American cities—a mystifying judgment, unless one remembers how different a New York from ours was that of the fifties, when a "villa in the country" to which Thackeray pays "an out-of-town visit" was situated a little to the west of Fifth Avenue, where are now Thirty-seventh and Thirty-eighth Streets. The general aspect of what there was of New York may not, however, have been so very different from the city of to-day.

"The houses," writes Thackeray, "are always being torn down and built up again, the railroad cars drive slap into the middle of the city. There are barricades and scaffoldings banging everywhere. I have not been into a house, except the fat country one, but something new is being done to it, and the hammerings are clattering in the passage, or a wall or steps are down, or the family is going to move. Nobody is quiet here; no more am I."

Thackeray was entertained by all the most distinguished men of the time, and General Wilson gives us interesting glimpses of the home life of Washington Irving, Ticknor, Emerson, William B. Reed, and others. But the novelist was essentially a club man. The occasions on which he dwells with the deepest appreciation are the dinners and breakfasts at Delmonico's, then at the corner of Broadway and Chambers Street, opposite A. T. Stewart's, and the gatherings of the Century Club in Clinton Place. At this club, which Thackeray called "the best in the world," he used to meet G. W. Curtis, Judge Charles P. Daly, Dana, the elder and younger Wallack, and many others, whom he always recalled with affection. Of Judge Daly, who died in 1899, General Wilson tells the following anecdote. When Daly was in London in 1851, he was presented to the Duke of Wellington, who said, "You are

too young to have reached a high place on the Bench." "I owe my position," replied Daly, "to one of those accidents of fortune to which your Grace owes so little." "I recall my criticism," said the Iron Duke grimly; "you are doubtless where you belong."

On his first visit to the South, Thackeray was inclined to think it was the slave-owners rather than the slaves who should be pitied. In 1853, he wrote: "The negroes in the good families are the happiest, laziest, comfortablest race of menials. They are kept luxuriously in working time, and cared for most benevolently in old age—one white does the work of four of them, and one negro that can work has his parents very likely and young children that can't." But on his second visit he wrote to his daughter from Charleston: "How fond you would be of the little blackies! . . . Happy they unquestionably are—but—but I remember telling you of a pretty little child scratching my elbow and holding up a plate to me at dinner when I was here before, and now—now my friend has tired of Charleston and his beautiful, luxurious house, garden and establishment, and has sold his house and slaves; and, I don't like to ask about the ebony child whom he tickled and nursed and brought up in luxury. and who, I fear, may be sold, too."

On both occasions when it came to leaving America and the kind faces that he hardly hoped to see again,Thackeray actually could not stand the ordeal, and fled to Europe at a few hours' notice without farewells. He was firm in refusing to write a book about his impressions of America, because in such a work there must be some criticisms, and, unlike Dickens, he could not bring himself to utter them—"May claret turn sour if I do!" In a volume which is a monument of good will on both sides, it strikes the reader as a false note to find Thackeray's "Half a Loaf" reprinted in full. It was written in alarm and indignation at a moment when he was confronted with the suggestion of certain American newspapers that, if the English involved themselves in the civil war in consequence of the incident of the Southern commissioners, the investments of British subjects in America should be confiscated. Thackeray had put a good deal of his money into American stocks, and he wrote on the spur of the moment an effusion that he must have regretted. Gen. Wilson prints here for the first time some verses which are not up to the mark of Thackeray's best. His light verse is, however, always good and occasionally excellent. The short ode to the nightingale on page 178 of the first volume will remind many readers of Matthew Arnold's "Philomela" in both form and expression.

The last half of the second volume is devoted to an index which failed us on two tests (it omits Prof. Henry Reed of Philadelphia, who is mentioned on page 169 of volume ii. as a friend of Thackeray, and a rather important reference to Delmonico's on page 316 of volume i.); and to a valuable bibliography of nearly 300 pages contributed by Mr. F. S. Dickson. The numerous full-page portraits of Thackeray and the reproductions of his amusing and spirited drawings are one of the most striking features of the book. Gen. Wilson's digressive manner has its drawbacks. Those who tell anecdotes inevitably repeat themselves, and his repetitions are frequent enough to make it the reviewer's duty to point out some of them in the interest of a second edition. On page 81 he repeats a saying of Thackeray's already quoted on page 67; page 247 is an echo of page 127; an anecdote about Lady Holland is repeated in volume ii., page 244, from volume i., page 93. Wellington's criticism of Sydney Smith is given twice at length in volume i., (pages 74 and 239); Thackeray's saying about Collingwood and the acorn occurs in volume i., page 236, and volume ii., page 104; in volume i., page 362 echoes page 359; the description of Col. Newcome's death is quoted in full twice in the second volume, Thackeray's tribute to Dickens is given twice, the anecdote of the seaman who read 'Pendennis' on an Arctic expedition is told twice—nor have we in this list exhausted the number of what are obviously involuntary repetitions. The Greek accents in one or two quotations need revision. On page 341 Challey Range is given for Whalley Range, and on page 88 of volume ii. Stephen Gyronn is surely a misprint (repeated in the index) for Stephen Gwynn.

CHILDREN'S BOOKS.—II.

Artists bold enough to undertake to paint the lily of Tenniel's designs for 'Alice's Adventures in Wonderland' have been found, and M. L. Kirk (whom we take to be of womankind) now brings twelve full-page color plates in contact and contrast with Tenniel's in the handsome edition of Frederick A. Stokes Company. Alice herself is not quite consistently imagined, and is a little underbred in the comparison, but, on the whole, the quality of these pictures is good and well-sustained, and will add distinctly to the average child's pleasure in the book. Especially commendable are Alice's descent through the rabbit's hole; the blue caterpillar and his hookah; the table party of Alice, the March Hare and the Hatter; the scene where Alice cries "Nonsense!" to the Queen; and the final dance of the Mock Turtle and the Gryphon.

By diligent distillation of standard works on Japan, written a generation or two ago by men who saw the old social and economic conditions of a people just emerging from insular hermitage, D. C. Angus has produced a very pleasant book for children under the title 'Japan, the Eastern Wonderland' (Cassell). The four-dozen illustrations, besides being bright and clear, hold well to the unchangeable things in nature and humanity. They picture especially social life and the industries which are not affected by modern innovations. The pretty book is one of the progeny of 'Alice in Wonderland,' and is properly clothed in Christmas dress. Wisely the author is willing to "take away eleven hundred years from our history . . . as 'mythical,' " to be still sufficiently proud that "our Mikado is the representative of the oldest reigning house in the world." In other ways he saves himself, by careful priming for his book, from corrupting the youthful mind in lands Occidental, for which he will be thanked by all who enjoy a well-told story free from exaggeration.

The humorous Laird of Littlegrange would have found irresistible 'The Rubáiyát of a Persian Kitten' in Mr. Oliver Herford's parody and illustrations (Scribner). Some thirty-five capital designs there are, confronting as many quatrains, and while children cannot comprehend the verse, they may (or many of them may) listen not impatiently to it while they study the delectable drawings of kitten adventure. Not one quatrain is flat, all are clever, and some exceptionally so. We append a couple of specimens, to whet the appetite for others we should like to quote were it fair. The first shows the kitten at the open refrigerator:

> Some for the Glories of the Sole, and Some
> Mew for the proper Bowl of Milk to come.
> Ah, take the fish and let your Credit go,
> And plead the rumble of an empty Tum.

And here is puss before the wire mouse-trap:

> 'Tis but a Tent where takes his one Night's Rest
> A Rodent to the Realms of Death address'd,
> When Cook, arising, looks for him and then—
> Baits, and prepares it for another Guest.

Annie R. Talbot's 'Bobby and Bobbinette' (H. M. Caldwell Co.) is a pretty little book, with its dainty cover and quaint illustrations. The story is slight, and some of the incidents not very probable, but children will not object to that. The heroine is quite a natural little girl, and if Bobby is rather too good to be true, we can at least take a real interest in their friend the doll-seller, her dog and her dolls. In fact, these last inanimate characters are as lifelike as any in the book. Any child who has ever owned a doll can sympathize with Miss Kathy when she says: "There's days that doll Filury would try a saint. She'll sulk, sulk, sulk, till I have to shet her up in a drawer to get red of her." It is, of course, a surprise to be told of "a line of poetry" which runs: "Hope springs perennial in the human heart"; but as the writer does not quote from Pope by name, we must assume that she is composing a verse of her own.

'Babes in Toyland,' by Glen MacDonough and Anna Alice Chapin (Fox, Duffield & Co.), is, by a reversal of the usual order of things, a story founded on an operetta. There is nothing to take the place of Victor Herbert's music, but for the stage setting we are fully compensated by the charming illustrations, colored and otherwise, of Ethel Franklin Betts, a pupil of Howard Pyle. The main idea is good, and the history of the principal characters in nursery rhymes ought to give scope for imagination; yet as a whole the book is disappointing. The adventures do not thrill us, and are not improved by a fairy element quite foreign to the spirit of Mother Goose. Even the descriptions of Toyland, with its animals of wood or india-rubber on velveteen lawns, and its Master Toymaker, leave us entirely cold. Much the best episode in the book is the visit of the Babes in the Wood to Mean Town, under the escort of Fuzzy, the Little Bear, whose portrait is fascinating.

Virginia Gerson's 'The Happy Heart Family' (Fox, Duffield & Co.) has a catchy title, bright red cover, and amusing illustrations. Yet one groans for a literary censor of the press to guard the ears of the nursery from such ungrammatical jargon as the following: "Nobody saw a great big letter that was lying right out in front of them on the grass, until little Mister Clumsy-heart stubbed his toe and stumbled all over it! He laughed out so it made them all turn round to see what was the matter—and there laid the letter!" Surely a

vigorous protest should be entered against such a well of English defiled, as the reading-matter of children. Again, is it humor to print occasional words in capitals? or is there anything subtly funny in representing the male characters with their hearts upside down? Altogether, the book is claptrap.

If C. Collodi's 'Adventures of Pinocchio,' translated by Walter S. Cramp (Ginn & Co.), were a mere picture-book without text, it would still be worth getting for Charles Copeland's admirable illustrations, in almost every instance superior to the work of Carlo Chiostri in the original. But as a story it will be a delightfully novel addition to our children's libraries. The very idea of a wooden marionette as hero, transports us to a far-off country; and as we follow his adventures till he finally turns into a boy, we feel more and more that the sentiment and the humor are alike foreign. Only the moral is familiar. The sad transformation of idle scholars into donkeys is set forth in a manner worthy of 'The Water Babies.' We could, however, wish that the style were on the same level. The translator, "in order to preserve the unique flavor of the story," has given us a strange admixture of anglicized Italian idioms and American slang. As instances of the former, ascertained by comparison with the original, we may cite "a nearly ruined table," "the guards wept like two baby lambs," "preserved meat," "when Pinocchio had drunk like a sponge," and the like; of the latter, such sentences as "if you had not been around, I surely would have escaped." Thus this "literary jewel," as Sara E. H. Lockwood calls it in her preface, would undoubtedly sparkle more brightly in a different setting.

Mrs. Molesworth's 'Ruby Ring' (Macmillan) and 'The Blue Baby, and Other Stories' (E. P. Dutton & Co.) are so characteristic of this prolific writer as to need little comment. In the 'Ruby Ring' we have some of Mrs. Molesworth's favorite gypsies. The other volume of short stories, collected under a title of unpleasant sound to medical ears, has no element more exciting than a monkey on a barrel-organ. In the one book the heroine learns not to be discontented; in the other, various children are shown the evils of forgetfulness, harsh criticism, deceit, and wilfulness. There will always be a certain class of little girls to like these simple plots, obvious sentiments, and clearly enforced morals, while their elders will rejoice in the model of good English which this writer invariably affords to young readers.

The stories in 'The Touch of Nature,' by Augustus Mendon Lord (American Unitarian Association), range over every epoch and every country, and all but two deal with the supernatural. For most adult readers they will have all the charm of fresh antiquities, and one statement at least, that St. Patrick came from Rome to be a missionary to the Britons, will cause them unfeigned surprise. The book would gain by the erasure of certain unpleasing colloquialisms, and by the substitution of illustrations less careless and less grotesque. Thus, in reading of Spain under the Moors and of a knight and page in armor, we resent a drawing of two theatrical matadors. But, as a whole, the stories are well chosen and well told.

'Mary's Garden, and How It Grew,' by Frances Duncan (Century Co.), is a charming little book, and, as the old phrase goes, combines instruction with amusement in an admirable way. It gives in simple, clear language the story of a child's labors over her garden from December to November, with enough practical information and enough illustrations to make it a valuable text-book. A few flower legends are prettily introduced, and there is sufficient sequence of plot to form a readable story. Of course all children cannot have the advice and superintendence of Herr Peter Trommel, and, as the little girl says, "Gardening is very distracting at times." But still this book ought to encourage many boys and girls to try their hand at this delightful occupation, and enable at least a few to succeed.

Ornament and Its Application: A Book for Students, Treating in a Practical Way of the Relation of Design to Material, Tools, and Methods of Work. By Lewis F. Day. London: B. T. Batsford; New York: Charles Scribner's Sons. 1904. Pp. xxxii, 319.

This is one of a long succession of books, by the same author, in which the arts of design are treated in a very practical way. A companion volume to the present one, entitled 'Pattern Design,' has been reviewed in these columns. The difference between the two is in the more serious attempt made, now, to explain the relation of the piece of decorative work itself, the material used, and the purpose to be served, to the ornamentation. We should use rather the term decoration, were it not for the title given to the book in hand, for decoration suggests the making of the whole piece decorous and fit in every way for its purpose, while ornament refers rather to that which has been put on without other end than the supposed need of adornment.

Now if we take the illustrations of this work, with only such reference to the text as the proper understanding of the illustrations makes necessary, we shall judge the book at its best. There are 289 illustrations, all included in the text; but some are very elaborate, while some are mere diagrams. Collectively, with their well-imagined "captions," they form a mass of very excellent material, calculated to instruct in the best way—that is, by the force of well-chosen examples. Page 166 has cut 156, "Forged iron scrollwork of the thirteenth century"; and cut 157, "Details of forged iron beaten into swages"—these last being drawn on a large scale. Page 167 is occupied entirely by cut 158, "Forged iron scroll-work of the seventeenth century." Page 168 shows cut 159, and the next page cut 160, the two dealing also with wrought-iron work and having captions which describe them rather closely, and point out the difference between them and between each of them and all the other pieces shown. This subject is continued on the following two pages, and two other cuts are shown which come directly into their places in the series. Given a little, a very little, knowledge of the subject of blacksmith work, and the reader who desires information about the different styles of such work—not the historical and epochal styles, but styles of workmanship and of design—will be well served.

On the other hand, if one reads the text which accompanies these pictures, he will find brief explanation of the way in which the work has been done in each case, and this explanation will seem to him to fail rather from mere brevity than from inadequate perception of the conditions. There is no peculiar brilliancy of analysis, but indeed the two pages of text which accompanies these plates (for there are not more than two pages of solid printed matter) contain clear description and positive setting down of facts about the work.

Chapter X. is entitled "From Process to Process," and it shows in text and in cut how the designer works when he models relief in clay, when he scratches the surface of other clay, producing thereby a fantastical pattern, when he cuts through one coat of clay to show other clay of a different color beyond—all of these pieces of work in plastic material being preparations for the firing which is to make pottery of the modelled or sculptured piece. But as the writer's purpose is to explain the way in which ornament develops itself and comes to be what it is, so he passes from this clay work to plaster work, and then to cutting in stone and wood, and again to rapidly incised work in metal for niello or for champlevé enamel. And, as a kind of work closely in harmony with the last-named, a mosaic of inlays is shown, garnet in metal, glass in ivory, clay in wood, glass in plaster in translucent patterns (windows for Cairene mosques). As before, we find the illustrations singularly well chosen and perfectly well explained by their captions, and as before the text is so very brief that it demands close attention from its reader. A sufficient space is not allowed for each separate truth to be dwelt upon, to be brought up again, held up in another light, reconsidered, reëxamined, reinforced.

This book appears to be and is much more important than the thinner book which we have called its companion volume, and every person interested in decorative design should possess it, if only for repeated examination of its very interesting pictures.

Style in Furniture. By R. Davis Benn. With illustrations by W. C. Baldock. Longmans, Green & Co. 1904. Pp. xvi., 338.

The spread of purely literary education, such as is given by the schools, has not produced as many treatises on the practical trades, the industrial arts, the daily work of manufacture and decoration, as might have been expected. There are but few such books, and when they come to our notice they are disappointing in a way, because one has not thought beforehand of the difficulty of expression on the part of those whose chief business in life is not writing. There have been such brilliant instances of success in that way—so many artists, for instance, who were never suspected of the power of verbal expression, yet have excelled in it—that one ceases to anticipate what should be the normal result of asking a skilful, responsible, and well-informed tradesman to write down his thoughts upon his own trade. And yet the reading public might have seen something of what they had to expect, in the business letters which they receive from workmanlike and businesslike men of affairs, men of good common-school educa-

tion; for it is quite well known to persons who receive many letters on business affairs that only correspondence clerks, and chiefs who have become chiefs because of unusual perspicacity, have learned how to write business letters which are intelligible. The exceptions are not as remarkable by any means as the prevalence of the rule.

In the matter of decorative furniture we have had occasion more than once to comment upon the internal evidence given by this or that book that its author was a thoughtful mechanic and perhaps an artist, but was not a skilled writer. Here, now, is a book with a similar characteristic visible in every page, and unfortunately showing itself in vexatious ways, as by the great number of quoted expressions and phrases, the numerous exclamation marks, the far too obvious attempts at small jocosities, and even by such errors of attribution and popular nomenclature as may easily arise where verbal exactitude is not a primary object of the writer. A "Jacobean chair of the Cromwellian period" may be a puzzle for the historian; a "bread and cheese cupboard" need not excite thought of "the hearty, simple fare of the old days," because, indeed, the name given is a modern and a merely fantastical one; it is a poor way to treat your own judiciously employed epithets to put them into quotation marks, and to print a legend under a cut in this fashion: "'New Art' Surface Decoration of the 'Wiry' Type (German)." The quotation mark is an obsession of our author, and he seems to enjoy inventing terms which are fairly descriptive and then spoiling them by this device.

The feeling that we have about the text extends in a degree to the illustrations, for while they are taken from good examples and are drawn with sufficient intelligibility, they are not made authoritative as to style and date, and they are curiously deficient in charm. To say that they are ugly would be to say too much, perhaps, for the artist may be excused for remembering always and insisting very strongly upon the polished surface of his varnished furniture; and when he has unlovely details to render, it is hard to make the picture attractive. Still, the thought must occur to every person who is familiar with modern illustration that to put "Chippendale" at the top of a plate is not enough of a guarantee, and that less work and a simpler style of drawing would have produced a more fortunate result.

Our fault-finding is now at an end. The book contains a great deal of excellent matter, and it is not ill arranged. Moreover, the good taste shown in the criticisms upon ancient and modern work is noteworthy. The volume is divided into chapters, with titles such as Sir William Chambers, Chippendale, Other Georgian Types, The Louis Quatorze, Empire, etc.—seventeen of them in all. There are 102 numbered plates which show many hundred separate objects, and there are also illustrations in the text. A sagacious plan is adopted of compelling the reader to consult the text in connection with the pictures. Plate so-and-so will have no legend or "caption" whatever, nor any title, but merely a reference to the text—sometimes to six different pages, for the same number of objects shown in the same plate. Those who have noticed the sad fact that an illustrated article in a magazine or an illustrated book is not often read carefully, and this because the man who should be a reader thinks that he gets from the pictures themselves all that there is to be got, because he glances at them, lays the book down, and is sure he is done with it—those persons will accept with applause this novelty. When one end of a very elaborate and gorgeous piece of furniture is shown you, with only Number 3 upon it, and only a reference to Page 244 for its title, the chances are very greatly increased that the lover of such things will look that numbered page up, and in this way get to see the piece of furniture as the author would have him look at it.

Man and Superman: A Comedy and a Philosophy. By Bernard Shaw. Brentano's.

At the School of Economics in London last May a number of well-known men and a few women met to discuss a paper by Mr. Galton on the science of "Eugenics." Mr. Karl Pearson was in the chair, and those who took part in the debate were Mr. H. G. Wells, Mr. Benjamin Kidd, two or three distinguished London physicians, and Mr. Bernard Shaw. Eugenics, we may explain for the sake of those who have not followed Mr. Galton's studies in heredity, is a word invented by him to stand for "the science which deals with all influences that improve the inborn qualities of a race." Mr. Galton prefers to call eugenics a science, but a number of those who discussed his paper insisted on regarding it as a new religion, which must be preached with fervor, while even Mr. Galton could not avoid using such words as "tenet" and "dogma" when he prophesied that one day men would believe in eugenics and live according to their belief. There was much talk about heredity, some asserting that we know enough already to use our statistics in a system of artificial selection, though the majority confessed a profound distrust of all such statistics. There was no agreement as to whether improving the environment would improve the stock, or as to what was to be done about the institution of marriage. All agreed that it is the chief obstacle in the path of eugenics, but, on the whole, it was thought best not to meddle with it till, the whole world being converted to artificial selection (for eugenics really amounts to that), marriage would be improved out of existence. The debate left Mr. Galton much depressed in his hopes for his new science.

One of his few whole-hearted adherents was Mr. Shaw, and we have said so much about eugenics because, in the comedy before us, written though it was before Mr. Galton's debate, he definitely aims at converting his readers to what we may call the dogmas of eugenics if we take it as a religion, or its laws if we choose to rank it with physics and chemistry—a step which really calls for an apology to both. Mr. Shaw's hero, the Superman, is, of course, the ideal type. But he would not be every man's, much less every woman's, ideal; and one of the grand difficulties that will have to be faced by those who experiment with the cult of the Superman—we mix our phraseology, like Mr. Galton, so as to cover both views—is that no two persons will agree on the type needed or the special qualities to be bred. Mr. Shaw's ideal is simply, if one may say so without rudeness, himself. John Tanner in the play is the philosopher who inevitably, at some stage of the race's development, turns and denounces its culture and its institutions, like Socrates, like Heraclitus before him, like Nietzsche and Ibsen, and the rest. Such a type is not only necessary but inevitable for the advancement of the race; it is bound to recur. But a race of Supermen of that kind or even a nation of them would be an absurdity; Plato himself, when he designed his impossible community, never expected to breed more than a very small minority of truly enlightened and superior men to guide the rest. Mr. Shaw's heroine is not the Superwoman, of whom, indeed, we hear nothing. Ann Whitefield is Everywoman, and her part is to defeat the purpose of the Superman and to tempt him to be false to his philosophy. In this she succeeds, for Mr. Shaw must make his play like life, though he may desire all that Mr. Galton desires, and may agree, as he did in the London debate, that the "violent preferences" of natural selection should be frustrated or ignored when the good of the race demands it. Nothing, indeed, was more amusing in that debate than the manner in which the theorists waved "love" aside as an irrational element that must be kept out of eugenics, while the men more in touch with affairs (the physicians especially) refused to leave out of the account the mysterious and incalculable force that always has stultified and always will stultify any form of eugenics as Mr. Galton conceives it. Mr. Shaw's hero, accordingly, after denouncing Ann as a vampire and declaiming against marriage, marries Ann.

It is on its sociological side that the play is interesting. The picture of the evolution of the Don Juan type, and the interlude in the underworld with the devil transformed into a bland hotelkeeper, give Mr. Shaw his opportunity for some amusing declamations against all existing institutions. Barring even the long interlude, the play would hardly do on the stage. It is meant to be read by a select few; stripped of its preface and its appendix of revolutionary maxims, and presented to a general audience, it would be both offensive and undramatic.

The Letters of Dorothy Wadham, 1609-1618. Edited by the Rev. Robert Barlow Gardiner. Henry Frowde. 1904.

Dorothy Wadham is a remarkable type of the foundress, even in England, where collegiate bequests by women have been common enough; and notable for the liberality, assiduity, and, on the whole, wisdom, with which she administered her trust. Her husband, Nicholas Wadham, died in October, 1609. He had talked over the plans for the college at Oxford with his wife, but left her by will no directions except that "she will bestow and employ" the residuary estate left unreservedly in her control, "to such uses and purposes as I have requested her." At this time she was seventy-five years old. Within six weeks she had applied for a charter; within nine months the cornerstone of the chapel had been laid; and in a little more than three years the buildings, which remain an almost unaltered delight to-day, were completed. A year before this time she had constituted the college of a warden, fifteen fellows, as many scholars, two chaplains, and two clerks, with the necessary servants. For her own

lifetime she retained the right to nominate to these positions, and her letters, now first edited by an old Wadhamite, relate chiefly to such appointments.

At times the aged foundress deprecates this duty. Writing November 15, 1614, concerning a batch of nominations, she premises to her "good Warden": "Allthough it bee not a thing fitt for me to appointe officers in my Colledge yet knowing by my statutes that I have reserved it unto my selfe and seeing that without my warrant ye will not presume the appointinge of them, etc."—and then follows the "slate." But this tone is rare, and generally her letters bear out the Wife of Bath's view, that women chiefly love dominion. Ordinarily, she addresses "My good Company" or "My Society" without apologetic preambles. Indeed, a feature pathetic, yet not precisely amiable, in her letters is the attempt to secure a post-mortem control of both regulations and appointments. Yielding to pressure from friends and relatives who desired scholarships, she created a waiting-list which could not have been satisfied till long after her death. Moreover, she seems actually to have supposed that no amendment of the rules of the foundation could be made after she was gone. But to this end she urges suggestions from the "Companye," being desirous in her lifetime "to see your Colledge perfect."

No concern of the college was too small for her. She virtually reprimands Warden Wright for appointing a substitute cook during the absence of the regular incumbent, and directs that a recommendee of My Lord's Grace of Canterbury be installed: "These [letters] shall be expressly to require you and your Company to remove uppon sight heerof Doctor Wrights man and to place Rodger Robinson as substitute under my cooke." In a less material spirit she commands in a postscript: "I would have prayers and fastinge dayes dewly observed in the house not allowinge any in ther Chambers to breake it or else where within the Colledge." On another occasion she reprehends the abridgment of the two-hour disputations regularly held after dinner. Bad conduct in her company distresses her greatly. Of an ill-conducted Fellow she writes that she is tempted to cut off his stipend: "I can hardly be drawen to send Robin Arnold his quarterage . . . were it not that I wish him better than he hath grace to conceive and also doubtinge his former frantick tricks. I pray let him not be untold by you whereby he may the better know himself." In like spirit she provides pensions for a "Mansiple" (steward), or orders that a long-standing glazier's account be paid "that ther may be noe more brabling with him." But perhaps nothing better shows her care for the general comfort of her appointees than her stipulation, forced by the unreasonable absenteeism of one of the chaplains, that his stipend should be transferred during such absence to the one remaining in service; "because the Chaplin's place is paynfull and troublesome beyond others."

Unhappily, the other side of the correspondence is not preserved, and we do not know how the "good company" took the rather minute solicitude of their patroness. It is significant, however, that she very promptly lost her first Warden by resignation, while her frequent admonitions to brotherly unity seem something more than perfunctory. When the foundation put on "mourning gowns" which the estate supplied in her honor—the furnisher, M. Boswell, was enjoined to supply "good cloth for his credit and at an easie prise for my [the executor's] purse"—it is possible that the "Societye" had mixed feelings toward the vigorous old gentlewoman. It may be conceived that their real regret for one who had cared for them generously was tempered with a certain relief that Nicholas Wadham's idea of a college was no longer to be interpreted by Nicholas Wadham's widow. But this is only the common lot of founders, and it is doubtful if any future treatise *de senilibus* can afford to neglect the extraordinary and on the whole wisely directed activities of the octogenarian Dorothy Wadham.

Studies in Prose and Verse. By Arthur Symons. E. P. Dutton & Co. 1904.

"Criticism," says Mr. Symons in the expository dedication of this collection of his magazine articles and prefaces, "is not an examination with marks and prizes. It is a valuation of forces, and it is indifferent to their direction." This is clearly the point of view of one who is a fine rather than a "great" critic, of one whose other half is poet rather than, as in the case of the great critics, historian or philosopher. We do not recall any of the latter sort who was ever quite indifferent to the direction of the forces he dealt with. Yet the fine critic of the former sort is likely to have representative import as well as personal interest. Mr. Symons is no exception. His volume is one of the most significant of recent books of criticism. In the long run, the considerable literary forces are ideas as they have been held by persons, and Mr. Symons's criticism is, like that of his acknowledged master, Walter Pater, the criticism of personality in literature, in a very special sense. We have but to call the roll of the personal forces he has evalued to apprehend pretty clearly the direction in which the significance of his criticism is to be sought. He writes briefly—but always pregnantly—of Balzac, Mérimée, Gautier, De Quincey, Hawthorne, Pater, Stevenson, Symonds, William Morris, De Maupassant, Daudet, Hubert Crackanthorpe, Robert Buchanan, Oscar Wilde, D'Annunzio, Meredith, Zola, Gorky, Tolstoy, Campoamor, Robert Bridges, Austin Dobson, Yeats, Stephen Phillips, Ernest Dowson, and (in the prefaces reprinted from the volumes of his poems) of himself.

To Stephen Phillips and one or two more of these writers Mr. Symons applies a firm, defining, and destructive criticism; in the case of Balzac, De Quincey, and Hawthorne, authors in the way of becoming classics, he is concerned with certain subtle aspects of their style and method; but in the case of the majority of the men named above, men marked whether by an admirable or a sad modernity, his affair is one of sympathetic interpretation, of the "valuation of forces." It is this that gives the book its unity and significance.

It is evident that, while the men of this latter company have in common the trait of being sincere artists, whatever they may be as men, they fall roughly into two sets as they are exquisite and wholesome, or wayward and "strong," writers. It is in dealing with the first set that the fineness of Mr. Symonds's literary sense and the close felicity of his prose style are most apparent. What, for example, could be more tellingly phrased than this of the diction of Robert Bridges?

"Mr. Meredith, caring mostly for originality, invents for every noun an adjective that has never run in harness with it, and which champs and rears intractably at its side. Mr. Swinburne, preferring what goes smoothly to what comes startlingly from a distance, chooses his epithets for their sound and for their traditional significance, their immediate appeal, sensuous or intellectual. Mr. Bridges obtains his delicate, evasively simple effects by coaxing beautiful alien words to come together willingly, and take service with him, as if they had been born under his care."

It is, however, in dealing with men of the second set, the more wayward moderns, that Mr. Symons is at once most sympathetic and most significant. Even in the case of that hauntingly exquisite poet and most impossible of disreputable persons, Ernest Dowson, Mr. Symons is an astonishingly faithful interpreter, though he has known too much of the wholesome uplands of English literature to be quite an apologist. It is, perhaps, in dealing with the brilliant, perverse art of D'Annunzio, so alien to sound Anglo-Saxon feeling, that we find Mr. Symons's most characteristic judgments.

"To D'Annunzio," he says, "there exist in the world only two things, sex and art. He desires beauty with the rage of a lover; and, to him, sex is the supreme beauty. The visible world 'exists' for him as an entirely satisfying thing, which the soul or the needs of the soul could but trouble to no purpose. Studious of the origins of emotion, he finds them wholly in the physical action of the senses, and seems to have discovered nothing in human nature which cannot be rendered to the eye by some image. . . . His adoration of beauty is a continual fever, and in the intoxication of physical desire he is conscious that passion, also, is a supreme art. This quality comes to him because he is not so much a novelist as a poet, a poet who writes better in prose than in verse, but who never thinks in prose. 'Le Vergini delle Rocce' is a shadowy poem, in which beautiful ghosts wander, 'as if seen in a great mirror'; they are tired of waiting for life, their souls wasted away by dreams, their bodies famished with desires too vague to find a name. . . . Yet (and here perhaps the Northern attitude of mind may seem to take its revenge) these books of D'Annunzio in which every earthly delight is so eagerly accepted, possessed so passionately, are all tragedies, often tragedies ending in gross material horror, and they are tragedies because no man has yet found out a remedy against the satiety of pleasure, except the remedies hidden away somewhere in the soul."

There is little to be abated here, though it should be said that for many readers the beauty of D'Annunzio is never an enjoyable beauty, because of the heavy scent of the *fleurs de mal*, from which it is never separate. And here, in his characteristic preoccupation with that inward dalliance of modern "temperament" with sensuous beauty and a more and more shadowy soul, we find the significance of Mr. Symons's criticism. This misty, mid-region of moods, troubled with beauty, desirous of truth, yet little zealous in deed, is that in which he is, intellectually, most at home. When he comes at the end to write lyrically, though half whimsically, of himself, he frankly confesses to many of the doctrines of that sect which finds its narrow scrip-

ture in Pater's 'Studies in the Renaissance': his subjects shall be the "moods of men," all of them; his favorite nature shall be the city, with its "beauty of artificial light"; his "escape" from life shall be art.

By virtue of the refinement and earnestness of Mr. Symons's writing, his book is, as a whole, more wholesome than would appear from the sum of its subjects and its doctrine. It is an able apologia, and it is, as we have seen, especially interesting as being in more than a superficial sense typical of the age. It is idle to fit words like "decadent" or "Alexandrine" to our so active and miscellaneous times. General letters, history, biography, criticism were never more capable and healthy, yet the fact remains that in creative literature, for the last score of years, the most sincere and individual art that we have had, has been neither robust nor "of the centre," but, as in the case of the men whom Mr. Symons has chosen chiefly to interpret, wistful or perverse.

Retrospects. By William Knight, Emeritus Professor of Philosophy in the University of St. Andrews. Charles Scribner's Sons. 1904.

Professor Knight need hardly have been so doubtful as he seems to be in his preface of his readers' ability to appreciate his 'Retrospects' without initiatory rites. It is his aim, he tells us, to avoid well-trodden ground; and, though his success in this regard is less than absolute, there is an air of novelty investing a very large proportion of the substance of his book. Here and there an old friend shows a familiar face. At the outset he deliberately denies himself the rôle of critic, but the habit of his life is stronger than his deliberate resolve, and from first to last we have a good deal of criticism and not a word too much.

There are thirteen at Professor Knight's table, but they all have "had their day and ceased to be," so that the fatal number need not disturb our minds. Carlyle has the MacGregor seat, not only as coming first in order, but as affording the most interesting matter. This chapter is almost entirely made up of anecdote and reminiscence; the Browning, Stanley, and Martineau chapters are compacted of letters and recollections in different degrees; the Shorthouse, Davies, Smetham, and Elwin chapters depend almost exclusively for their interest on the letters they contain. Professor Knight laments that there are so few good reports of Carlyle's conversation, and tells of forty pages of Stanley's notes of a single talk, which have mysteriously disappeared. Carlyle did not reciprocate Stanley's admiration. "Eh, the Dean!" he said: "he's a man who just gets drunk on toast and water!" But those whom he did not depreciate were few. "Maister Darwin," he said, "is no better than John Mull [Mill] or Maister Herbert Spencer; they're a' *magneeficent asses.*" Conducting family prayers at a friend's house in Scotland, he read nearly half the Book of Job, pleading that "Eliphaz the Temanite was verra interesting." Disraeli and Gladstone were to him *Tros Tyriusve.* He said: "I don't know that Dizzy has got a conscience. Gladdy *has* a conscience, but he turns it any way he has a stomach to, and immediately thinks it is a call from God." In the Kingsley-Newman fight he thought, being quite isolated here, that Kingsley had the best of the argument. He acknowledged Newman's cleverness, but could not abide his "palpable mendacities." Professor Knight is forgetful when he writes of Carlyle as "savagely denouncing all oppressors." He spared the American slave oligarchy and Gov. Eyre. There is interesting testimony to Carlyle's courtesy and to his deference to others in conversation; in this particular shaming Tennyson, Browning, Martineau, and others.

Professor Knight's interest in Maurice is very great, but he does not succeed in making him impressive to us. The Tennyson chapter adds little to what we have already heard. Tennyson thought Maurice "far greater than Newman, really more spiritual and profounder every way." Among sonneteers he ranked his brother, Charles Turner, next after Shakspere, Milton, and Wordsworth. His ideal sonnet showed "a continuous advance of thought and movement"; but many lovers of the sonnet, if they do not prefer that form where the sestet recoils upon the octave, as notably in Drayton's

"Since there's no help, come let us kiss and part,"

will contend that it is certainly not inferior to the other. The intensity of Tennyson's passion for personal immortality has often been remarked. Professor Knight reports him as saying, "The idea of annihilation would be more horrible to me than the idea of everlasting torments," but it would be different with the realization.

The Browning chapter is interesting principally as showing the poet's warm admiration for Wordsworth. He said of some of his earlier poems that "he could never be tired of loving them, while, with the best will in the world, he could never do more than try hard to like them." If Professor Knight's understanding of Browning's "Memorabilia" does not completely invert Browning's meaning, we have been much mistaken heretofore. The Martineau chapter is a significant comment on certain attempts to exhibit Martineau as leaning to the traditional theology. Let him idealize and adumbrate orthodoxy to suit his taste, and he could conceive it as something very attractive. But here is a passage that will be worth remembering from time to time. It expresses exactly the idea of Emerson's "Divinity School Address":

"The substitution, in short, of religion at *first hand*, straight out of the immediate interaction between the soul and God, for religion at *second hand*, fetched, by copying, out of anonymous traditions of the Eastern Mediterranean, eighteen centuries ago, has really been the directing, though hardly conscious, aim of my responsible years of life."

The recollections of Dean Stanley do little more than confirm previous impressions, the best of them being the most familiar, the Dean's speech in Convocation, defending Bishop Colenso. Some of the letters in the later chapters are too slight to justify their use. The distinguished names attached to them are not enough. Those by the less distinguished persons are frequently the better. Especially agreeable are the glimpses of J. Henry Shorthouse and Anna Swanwick. In the chapter on Whitwell Elwin we have good Wordsworthiana—for example, the poet's staying at home at Abbotsford when visiting Scott, and listening delightedly the whole morning to his sister's reading of "The Excursion"; (!)—and, *per contra*, his eight-mile midnight walk to intercept a letter and change a word in a poem he was sending to the press.

BOOKS OF THE WEEK.

Æsop's Fables. Arranged for children by Nellie P. Dobbs. Topeka, Kansas: Crane & Co. 50 cents.
Aldrich, Thomas Bailey. Judith of Bethulia. Boston: Houghton, Mifflin & Co. $1 net.
Ashley, Roscoe. Government and the Citizen. Macmillan Co. 70 cents.
Bacon's Essays. Facsimile Reprint of the First Edition. Dodd, Mead & Co. $2.50 net.
Beecher, Henry Ward. A Treasury of Illustration. Fleming H. Revell Co. $3.50 net.
Benham, Canon. St. John and his Work. (Temple Series.) Philadelphia: Lippincott.
Blanchard, Amy E. Bonny Lesley of the Border. Boston: W. A. Wilde Co. $1.50.

PEDAGOGUES AND PARENTS

By ELLA CALISTA WILSON

$1.25 *net* (by mail $1.37).

This book is a discussion from the parent's point of view of schools and education, actual and ideal, and of some of the older educational classics.

Outlook: "This sensible treatise . . . with wit and due sentiment she examines the claims of educators and the results of methods . . . a thorough reading of this book will bring pedagogue and parent nearer together.

Appletons' Juveniles for 1904

THE FIGHT FOR THE VALLEY. By W. O. STODDARD. Illustrated in colors and in black-and-white by B. West Clinedinst. 12mo, Ornamental Cloth, $1.50.

The narrative is picturesque and thrilling and throws an interesting side-light upon a little known and much misunderstood chapter of American Revolutionary history.

IN THE REIGN OF QUEEN DICK. By CAROLYN WELLS. Illustrated with eight drawings in black-and-white by Strothmann. 12mo, Ornamental Cloth, $1.50.

This delightful children's story tells of the adventures of Bob and Betty in the land of Nod under the protection of the Knight of the Night.

THREE GRACES AT COLLEGE. By GABRIELLE E. JACKSON. Illustrations in color by C. M. Relyea. 12mo, Ornamental Cloth, $1.50.

A charming story of college life, its ideals, recreations, temptations, and rewards.

THE VINLAND CHAMPIONS. By OTTILIE A. LILJENCRANTZ. Illustrated by the Kinneys. 12mo, Cloth, $1.50.

THE LAND HERO OF 1812. By C. C. HOTCHKISS. Illustrated in color and black-and-white by B. West Clinedinst. 12mo, Ornamental Cloth, $1.25.

EVERY-DAY GIRLS. By JULIE M. LIPPMANN. Illustrated in colors. 12mo, Ornamental Cloth, $1.50.

THE DEADWOOD TRAIL. By GILBERT PATTEN. With Illustrations by Will Crawford. 12mo, Ornamental Cloth, $1.50.

THE BOY ANGLERS, Their Adventures in the Gulf of Mexico, California, the Pacific and Atlantic Oceans, and Lakes and Streams of Canada. By CHARLES FREDERICK HOLDER. Illustrated. 12mo, Ornamental Cloth, $1.50.

OLD PUT, THE PATRIOT. By FREDERICK A. OBER. Illustrated. 12mo, Ornamental Cloth, $1.25.

TEDDY BAIRD'S LUCK. By KATE DICKINSON SWEETSER. Illustrated in color and black-and-white. 12mo, Ornamental Cloth, $1.25.

THREE ROUSING BOOKS FOR BOY READERS

By RALPH HENRY BARBOUR

ON YOUR MARK! A Story of College Life and Athletics. Illustrated in colors by C. M. Relyea. 12mo, Ornamental Cloth, $1.50.

Mr. Barbour's boys are real boys living in a very real world; and no other author has caught more truly the spirit and ideals of modern school and college life.

THE BOOK OF SCHOOL AND COLLEGE SPORTS. 12mo, Ornamental Cloth, $1.75 net. Postage additional.

No author could be chosen whose appeal would be more direct and convincing to both old and young than Mr. Barbour. His books for boys about boys have met with wide favor, and in them he has found a way to the hearts of the old graduates and prospective university men alike.

THE ARRIVAL OF JIMPSON, and Other Stories for Boys About Boys. Illustrated. 12mo, Ornamental Cloth, $1.50.

Good stories of college pranks, and of baseball, football, hockey, college newspapers, and all the features that go to make up the fascinating world of college life.

VOYAGES AND TRAVELS

OF AN

Indian [illegible] and Trader

describing the Manners and Customs of the North American Indians; with account of the Posts on the Saint Laurence, Lake Ontario, &c.; Vocabulary of the Chippeway Language; Names of Furs and Skins in the English and French; list of words in the Iroquois, Mohegan, Shawanee, and Esquimeaux Tongues; and Table, shewing the Analogy between the Algonkin and Chippeway Languages; by

J. LONG.

Edited with notes, etc., by

REUBEN G. THWAITES, LL.D.,

One volume, large 8vo, pp. 330, cloth, gilt top.

With Facsimile and Folding Map.

Price, $4.00 net, express prepaid.

Its value is threefold; first, for the sidelights upon the Canadian campaigns of the American Revolution; second, for the settlement of the Loyalists in Upper Canada at the close of that war; third, for a "most faithful picture of the life and manners of the Indian and Canadian Traders"—(Volney, *Travels in America*), especially in the period of cutthroat competition that ensued before the fur trade was consolidated and regulated by the great Companies that later controlled it. "It is also linguistically valuable, and the author . . . has given a candid account of the injustice perpetrated on the Indians by the British."—(SABIN, *Bibliotheca Americana*). His participation in the British expedition that raided Prairie du Chien toward the close of the Revolution brings this work within the field of Mississippi Valley history.

"Of the editing itself one needs but to say that it is done by Dr. Thwaites, whose work has left him without a peer in the breadth of his scholarship and the vastness of his contributions. The editor's annotations make the present series worth possessing, even if one already owns the originals."—*The Independent.*

"The paper is beautiful and the volume a fine model of typographical excellence."—*New York Sun.*

THE ARTHUR H. CLARK COMPANY
CLEVELAND, O.

A GRADED COURSE OF ETHICAL INSTRUCTION FOR THE YOUNG

In Four Volumes. For Use in the Home, the Grammar School, or the Sunday School.

Designed to impart the elementary principles pertaining to right and wrong in their application to the varied relations of human life, while preserving an attitude of strict neutrality with reference to the doctrines of religion.

THE STRATEGY OF GREAT RAILROADS
By Frank H. Spearman
"The volume helps to fill an important blank in the library of railroad literature."—*Wall Street Journal.*
With 9 maps. $1.50 *net.*
(Postage 15 cents.)

The TEMPER of the 17th CENTURY in ENGLISH LITERATURE
By Barrett Wendell
"For their candor, justice and high ideals there can be nothing but praise."—*N. Y. Ev'g Post.* $1.50 *net. Post.14c.*

THE ITALIAN POETS SINCE DANTE
By the Hon. William Everett, LL.D.
"No such entertaining literary criticism has been written in America for a long time."—*Nation.*
12mo, $1.50 *net.* (Postage 14 cents.)

THE GOLDEN BOWL
By Henry James
"It is done perfectly."—Talcott Williams in *Book News.*
"A generous and characteristic story."—*N. Y. Sun.*
2 volumes. $2.50.

ROMNEY: A Biographical and Critical Essay
With a Complete Catalogue Raisonne of his works.
By Humphrey Ward and W. Roberts
4to. 2 vols. Ordinary edition $50.00. Edition de Luxe, on Japan paper, $80.00 *net.*

POEMS OF CHILDHOOD
By Eugene Field
Illustrations in color by MAXFIELD PARRISH.
"The illustrative work, like the verse, is wholly out of the common."—*Outlook.*
$1.00 *net.* (Postage 10 cents).

A DIVORCE
By Paul Bourget
"Constructed with rare skill and abounds in touching situations."—*Gaston Deschamps in Le Temps.*
12mo, $1.50.

THE RUBAIYAT OF A PERSIAN KITTEN
By Oliver Herford
"One of the neatest bits of parody we have seen in some time."—*N. Y. Evening Post.*
Illustrated by the author. $1.00 *net.* (Postage 10 cents.)

THE UNDERCURRENT
By Robert Grant
"A novel that is alive and intense from its beginning and is interesting to its end."—*Boston Times.*
Illustrated by F. C. YOHN. $1.50.

WITH KUROKI IN MANCHURIA
By Frederick Palmer
"In chapter after chapter, the tragic Manchurian orgy lives again and the reader is hurried along in spite of himself."—*Pall Mall Gazette.*
24 battlefield illustrations. $1.50 *net.* (Postage 15 cents.)

MEMOIRS OF MADAME DU BARRY
By H. Noel Williams
"Very honest and very fair. . . . The volume is handsomely illustrated and well indexed."—*Chicago Evening Post.*
Illustrated in Photogravure 4to, $7.50 *net.*

EMMANUEL BURDEN
By Hilaire Belloc
"The delicacy of the satire is delightful."—*New York Evening Post.*
Illustrated by G. K. Chesterton. $1.50.

THE AMERICAN NATURAL HISTORY
By William T. Hornaday
"Will remain for scores of years as the abiding authority."—*Outdoor Life.*
Over 300 illustrations.
$3.50 *net.* (Postage 48 cents extra.)

IMPRESSIONIST PAINTING
By Wynford Dewhurst
Beautifully illustrated. Large 8vo, $9.00 *net.*

THE MICROCOSM OF LONDOM
By Pugin and Rowlandson
With 104 illustrations in color.
Three volumes, $15.00 *net.*

THE MOST ILLUSTRIOUS LADIES OF THE ITALIAN RENAISSANCE
By Christopher Hare
Illustrated 8vo, $3.00 *net.*

CHARLES SCRIBNER'S SONS, New York

LONGMANS, GREEN, & CO.'S NEW BOOKS

Life and Energy:

An Attempt at a New Definition of Life; with Applications to Morals and Religion.

A revised account of four Addresses given at the Polytechnic Institute, Regent Street, London, by WALTER HIBBERT, F.I.C.A. M.I.E.E., Head of the Physics and Electrical Engineering Department at the Polytechnic Institute. Crown 8vo. $1.00.

A Scheme for the Detection of the More Common Classes of Carbon Compounds

By FRANK E. WESTON, B.Sc. London (First Class Honours) F.C.S. Lecturer in Chemistry at the Polytechnic, Regent Street, W. 8vo, 75 cents.

Economic Method and Economic Fallacies

By WILLIAM WARRAND CARLILE, M.A., author of "The Evolution of Modern Money," etc. Demy 8vo, cloth, $3.00 *net*. Postage extra.

In this work the keynote of the first two parts is the stress laid on the essential character of the distinction which exists between the methods of investigation that are appropriate in physics and those that are applicable in sciences, such as economics, which belong, in truth, to the mental sphere. In the third part the author brings his general line of reasoning to bear on the Fiscal Problem.

Fragments of Prose and Poetry

By FREDERIC W. H. MYERS, Author of "Human Personality and its Survival of Bodily Death," &c. Edited by his Wife, EVELEEN MYERS. With 4 Portraits. 8vo, $2.50 *net*. By mail $2.64.

CONTENTS.—*Fragments of Inner Life*—Parentage and Education—Hellenism—Christianity—Agnosticism—The Final Faith—Conclusion.—*Obituary Notices.*—Edmond Gurney—Professor Adams—Robert Louis Stevenson—Lord Leighton—The Right Hon. W. E. Gladstone—John Ruskin—Henry Sidgwick—G. F. Watts, R.A.—*Poems.*

The Tiger of Muscovy

A Romance of the Days of Ivan The Terrible

A Novel. By FRED WHISHAW. Crown 8vo, $1.50.

A Daughter of Jael

A NOVEL

By LADY RIDLEY, Author of "Anne Mainwaring," etc. Crown 8vo, $1.50.

MR. STANLEY WEYMAN'S

The Abbess of Vlaye

Crown 8vo (with frontispiece), $1.50.

. . . "In the author's best manner . . . next to "The Red Robe," it is decidedly the best book Mr. Weyman has written . . . When we compare Mr. Weyman with the numerous writers who have tried to follow after him we can appreciate his true excellence. He always has a story to tell, and he always knows precisely the best way in which to tell it." . . . W. L. ALDEN in the N. Y. Times.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

TEXT-BOOKS BY AUTHORS OF NATIONAL REPUTATION

The high school and college text-books issued by the **American Book Company** form a list unrivaled in its scope, importance, and value. The authors and editors of these books have been chosen with great care, and are all scholars of eminent standing and authorities on their respective subjects.

Professor **Henry van Dyke** of Princeton is the general editor of the Gateway Series of college entrance requirements in English. Dr. **William J. Rolfe** is issuing through this house his new and revised edition of the plays of Shakespeare. A new Greek Series for Colleges and Schools is under the general supervision of Professor **Herbert Weir Smyth** of Harvard. Professor **Edward P. Morris** of Yale and Professor **Morris H. Morgan** of Harvard have charge of a Latin Series for Schools and Colleges. A Series of Essentials in History is prepared in consultation with Professor **Albert Bushnell Hart** of Harvard. Professor **Lucien Augustus Wait** of Cornell is general editor of the Modern Mathematical Series.

Among the Other Noted Men

on the list of the **American Book Company** may be mentioned Professor **Adams Sherman Hill** of Harvard, Professor **Brander Matthews** of Columbia, Dr. **Hamilton W. Mabie** of "The Outlook," Professor **George Park Fisher** of Yale, Professor **Simon Newcomb** of Johns Hopkins, Professor **Joseph Ames** of Johns Hopkins, Professor **Albert Harkness** of Brown, Professor **James McMahon** of Cornell, Professor **Borden P. Bowne** of Boston University, Professor **Andrew W. Phillips** of Yale, Professor **J. H. Tanner** of Cornell, Professor **Irving Fisher** of Yale, and Professor **Basil Lanneau Gildersleeve** of Johns Hopkins. The Company also publishes the standard works of such authorities as **Gray, LeConte,** and **Dana.**

An illustrated descriptive catalogue of School and College Text-Books will be sent without charge to any teacher on request.

AMERICAN BOOK COMPANY

NEW YORK CINCINNATI CHICAGO BOSTON

The Nation.

NEW YORK, THURSDAY, DECEMBER 22, 1904.

The Week.

"We are going to make the dirt fly on the Isthmus." That was the triumphant word which Mr. Roosevelt sent to the protesting Yale professors, after his unhappy *coup* in Panama. Nearly a year has passed, and not even the plans for the canal are yet fixed, so obstinately do the Culebra ridge and the Chagres River refuse to get out of the way at the bidding of impetuosity! The chief engineer of the Commission, Mr. Wallace, has made a report to Congress in which he discusses the difficulties in a very open-minded way. It is evident that he favors a cut at sea-level. Indeed, expert opinion and Congressional preference seem now to be strongly leaning that way. Admiral Walker, however, stands by the old plans, largely on the score of economy and saving of time. Mr. Wallace speaks quietly of fifteen or twenty years' work to be done. This leaves the enthusiastic dirt-flying of a year ago looking slightly premature. The watcher on the peak in Darien will have to wait long before seeing the stately ships go by.

In connection with the Panama Canal, the President is already beset by Congressmen and others to make sure that all contracts go to Americans. It is true, the law requires him to get the work done as well and cheaply as possible, but it is argued that the intent could never have been to compel high-born Americans to compete with low-down foreigners. Sharp complaint is made that lumber from Puget Sound has been carried to the Isthmus in German bottoms, though American ship-owners stood ready to undertake the job at a higher price. Admiral Walker shows himself singularly obtuse on this point. He says that the Commission is going to get all the lumber and other material carried as cheap as possible. Bids will be invited, and if the foreigner is below the American, the former will get the contract. There seems to be something wrong about this. It may possibly be defended on business principles, but the canal is a great national work, and it is well known that the hearts of patriots will not beat warmly for their native land unless an appropriation or a "rake-off" apply the needed stimulus to the cardiac muscles.

President Roosevelt has instructed Mr. Willcox, the recently appointed postmaster of New York, to eliminate politics from the service here; and he has also commendably dismissed J. C. Keller, president of the National Association of Letter Carriers, and Frank H. Cunningham, president of the National Association of Rural Free Delivery Carriers. Their cases were very clear. They had seen the pension lobbyists, the ship-subsidy lobbyists, the river-and-harbor lobbyists, and a dozen others busily pushing their schemes through Congress; and they wanted for the carriers a chunk of the pork. Accordingly, they absented themselves from their duties—for which they were paid by the Government—and spent considerable time in lobbying for an increase of carriers' pay. Their conduct was not only indecent in itself, but in flat violation of President Roosevelt's order prohibiting individual or organized attempts of Government employees to influence legislation. The order itself was obviously in the spirit of civil-service reform. The disregard of it by these two men was particularly flagrant. In the last election the two organizations of carriers frankly adopted the methods of the highwayman: "Money for us, or your political life." Against this outrage the President's action has been emphatic, swift, and salutary.

For so ardent a lauder of high prices as Secretary Shaw recently showed himself, his conversion is lightning-like. Here he is calling upon American farmers to sell their wheat "cheap enough to permit the American miller to undersell." Where is the Home Market Club? What has become of that Midas touch, "selling to ourselves"? Indeed, the whole professed theory of protection is topsy-turvy in Mr. Shaw's statement respecting the drawback on Canadian wheat. The price of American hard wheat, he says, is "about 16 cents above that of Canada." But does he rejoice in that fact? Does he point to it as a triumphant proof that the agricultural schedules of the Dingley tariff, inserted with such broad winks to "fool the farmer," are at last beginning to be effective? No; the Secretary is as anxious and troubled as any free-trader about our foreign market. We must keep that at all hazards. Yet our high prices are killing it. Exports of flour are off one-half. Foreign merchants are telegraphing to American millers, "Your prices are out of sight." Hence the Secretary's incessant labors to lower the price of wheat. But on one point he is unyielding. Flour must not be cheap for the American consumer. We may have special laws and orders, and strain every nerve to give the English artisan cheap bread; we must do our best to feed the German and French laborer at small cost, but no American shall be robbed of the blessing of high prices for the necessaries of life. His right to pay double is inalienable.

It is the exception for Reed Smoot's name to be mentioned in the evidence which concerns his right to a seat in the Senate. Nevertheless, the testimony now being taken is vital to the whole proceeding. Mr. Smoot as an individual has nothing to do with the case. If the Senate is willing to have any Mormon apostle in its membership, he is the one, perhaps, to whom least objection would be made. He can be excluded only on the theory that the Church control is such that no one of its officers could be free from the possibility of its dictation even in his vote as a United States Senator. Last year, President Smith testified that if Mr. Smoot had become a candidate for Senator without asking permission, he would have been considered "out of harmony with his quorum"—an expression which does not mean much to a Gentile. He declared, however, that this consent amounted to no more than it would in any business house, where the cashier would naturally speak to the president before entering on a political campaign outside. We are now getting more light on the workings of the Church in politics. In Idaho, for instance, the Republican candidate for Governor, put up by the Mormons, ran ahead of Roosevelt in the Mormon counties and behind him in the Gentile counties. Many other cases could probably be discovered in the country where race or religious prejudice similarly helped one candidate and hurt another on the same ticket. A very wide net has been thrown out by the committee. It is catching no end of interesting and damaging details about Mormonism, but we are still far from a conclusive demonstration of the facts that would justify Smoot's unseating.

Upon the ear of a Senate fearful lest its right to go to war be curtailed, the appeal of the great arbitration meeting held in this city on Friday night should fall reassuringly. Any Government bent on fighting can do so, treaties or no treaties. One of the barbarities of war is the repudiation of treaties. Hence, even if a nation bound itself to arbitrate certain questions, it could, if it chose in the madness of the war passion, be false to its own pledges and add duplicity to misery. War being essentially a savage thing, no civilized restraints can hold back people determined to plunge into it. The Senate, therefore, need not be afraid of binding the country too securely to civilization. All that is asked of it is to give the peace habit a preference. After all, it can do no lasting harm to permit the nations to settle a

few controversies in the same way that individuals do everywhere—by referring them to impartial judges. The arbitrament of war, as we see it just now in the struggle between Japan and Russia, is not so speedy, certain, or glorious as to make the Hague Tribunal appear contemptible.

The members of the House of Representatives and of its Judiciary Committee differ on the question whether Judge Swayne's conduct of receiverships, treatment of litigants, and alleged residence in Delaware justified his impeachment, but they agree unanimously that his charge of $10 a day for expenses, when he really spent only four or five, constituted a "high misdemeanor." This is undoubtedly good law, but it is a little surprising that the only unanimous condemnation should be of a practice that is so often regarded as a venial offence in various branches of the Government service. Mr. Lacey of Iowa asked, during the debate, what was the custom of other Federal Judges as to the $10 a day charge for expenses, and suggested that the House needed to have "a job lot of impeachments covering the whole district or circuit." A year ago, it will be remembered, when the special session merged into the regular session without interval, the Appropriations Committee reported in favor of paying $145,000 for mileage to members who had never left Washington at all. It was seriously asserted on the floor that the 20 cents per mile allowed by the Constitution was not intended to bear any actual relation to travelling expenses, but was intended simply as additional compensation. The House finally decided not to take the money, but many members were unconvinced. The Congressman draws his "stationery allowance" and clerk's salary, whether he uses them for the specified purpose or not. In the departments it is almost a general rule that when a maximum is fixed for any privilege, this maximum comes gradually to be regarded as the regular thing. The allowance for sick leave for not more than two weeks in the year becomes a regular supplementary vacation. If Government officers in general are interested enough to reflect on Judge Swayne's case, they have many chances to put their conclusions into practice.

The Philippine Improvement bill goes back to the House a decidedly safer measure than when it started. It will not be possible now for a railroad company to mortgage away its property and leave the Government in the lurch, nor to secure the guarantee of returns on the whole line when only a part is completed. Moreover, the guarantee itself is cut down from 5 to 4 per cent. Some of these are points which the Democrats urged in the House, but, as the measure was brought in under a special rule which forbade amendment, there was no chance there for alteration of the clauses objected to. It ought to have as full and fair a discussion now on its return as it has had in the Senate. The vote on Mr. Bailey's amendment is one of those things which will doubtless be regarded as a straw showing which way the wind sets. Ten Republicans, all Western men except Senator Knox, voted with the Democrats to put the control of railroad rates in the hands of the Philippine Commission. Three more Republican votes would have carried the amendment.

The two hundred American clergymen, physicians, and merchants resident in China who have petitioned Secretary Hay on behalf of the admission of Chinese students and men of wealth and position to this country, would see their appeal granted at once were its justice the sole determining factor. To Filipinos, Japanese, Koreans, Porto Ricans, natives of India or the South Sea Islands our institutions of learning stand wide open. But to Chinese students the great educational opportunities are practically closed by the Exclusion act because of a senseless prejudice. Everybody admits that the Japanese who have been trained in this country have been important factors in bringing about the wonderful political and material progress of that country. It is universally believed, too, that a similar development of the Chinese Empire is most desirable from every point of view. Yet the United States, the country which would profit most by it, takes the untenable position of excluding all who might help to bring it about. Obviously, this is giving other nations an opportunity to make their influence felt indirectly, which is most heartily welcome.

"When once they get the old man of the sea—Protection—on their back, he is impossible to shake off." This sentence from Lord Rosebery's recent speech at Glasgow clearly refers to the efforts of this country to escape from the trammels of the protective tariff. The more we struggle, the more tightly we are enmeshed. The difficulty in the way of reform is intrenched corruption; for, as Lord Rosebery pointed out, "protection taints every source of public life." The protected interests, which draw an incalculable revenue from class legislation, can make and unmake every public officer, from poundmaster to President. They can and do dictate to Senators and Representatives their speeches, their policies, their votes. Do Senators Aldrich and Hale fear the stand-patters for naught? Is it love of his native land, or is it tenderness towards the men who are "financing" the Republican party, which arrays Speaker Cannon against tariff reform? Why do the high protectionists tell the President that in urging amendment of the Dingley law he is beating his head against a stone wall? These questions answer themselves. The people want tariff reform. The replies received from the *Evening Post's* inquiry of the first thousand men in 'Who's Who in America' are ten to one in favor of revision. But against this popular demand stand the inordinate greed of the protected monopolies and an inexhaustible war chest.

The Southern press has been quick to see that Senator Platt's connection with the proposal to cut down the South's representation in Congress is harmful to the project. The Charleston *News and Courier* is willing to discuss Congressman Burton's bill, but not Mr. Platt's, who, it says, "has never learned to play but one game—the game of politics—and he has always played it for profit and not upon principle." It is quite certain that Congress will realize that this is a matter in which the guidance of peanut politicians should not be accepted. There is relief in the South that the Republicans give no sign of earnestly pushing any measure, for it was thought that Roosevelt's landslide would encourage them to attempt something pretty radical. It is obvious enough that the reduction of representation is really dreaded, and would be received as a severe punishment. All the talk about the South's welcoming it as an acquiescence in the disfranchisement of the negro appears to be in the nature of a bluff. The New Orleans *Times-Democrat* beseeches the South to keep quiet. The Southern members must not be "drawn into debate on this subject," for a heated discussion would have the effect of stirring up the issue and—note the admission—"strengthening the hands of the enemy." All of which looks very little like a calm acceptance of reduced representation.

Republicans of New York can now say with conviction, as the members of the Directory said after their interview with Napoleon, "We have a master." Mr. Odell has served notice on them that he holds their party in the hollow of his hand. His solemn pretence of "consulting" his creatures up the State on the Senatorial question would not deceive a child in arms. Odell exhibits the Republican organization as his personal property. It is as his own horse or ass, and he will ride it or flog it as it pleases him. His appointment of "Charlie" Murray to be judge of the Court of Claims, so as to get him conveniently out of the County Chairmanship, and his naming of the notorious Halpin for the vacancy, combined with his determination to oust and humiliate Mr. Depew are demonstrating that the new boss believes

in the policy of thorough—thorough autocracy and thorough unscrupulousness. Senator Depew ought to regard it as a certificate of character that Odell is against his reëlection. Indeed, if the junior Senator is now to quit the scene, he may be regarded as happy in the opportunity of his political death. A machine capable of taking a Black at the dictation of an Odell has no real honors to bestow upon any man.

The public memory is short, but it cannot yet have forgotten Black's term as Governor. The tone of it was low throughout. He began with an ignorant and brutal attack upon the civil-service laws. Under him the canal scandals created their stench. So bad was the impression made by his Administration that the machine dared not renominate him, and Roosevelt, with all his Cuban laurels green upon him, had to be called in to save the day. Even he narrowly escaped defeat; and the worst drag upon his canvass was the record of Gov. Black. That this man should now suddenly appear as the Senator whom the Republicans of New York are panting to elect, is one of the most ghastly jokes which a boss ever perpetrated. The whole situation is as critical as shameful for the Republican party of the Empire State. It sees itself treated like a chattel. A man about to retire from the Governorship in unexampled odium coolly proposes to go on ruling the party with a rod of iron. Against this degradation there will be protest if there is a spark of manhood left.

Eleven Massachusetts cities voted in the first half of December on the Luce Direct Primary law. Nine which had tried it once rejected it for future elections. One, which had refused to adopt it in the first place, took the same action again, and but one of those which had tried the law voted to continue it in operation. Reckoning in Quincy, which acted favorably, there were more than twice as many voters against the law as for it. This is a curious result to be reported only a month after an election in which primary reform made great advances all through the Western States. The feature of the law which caused its unpopularity seems to be its requirement that the voter, before sharing in the primary, declare whether he is a Republican or a Democrat. It is considered a violation of the principle of secrecy in voting, which of course it is, in a sense, though under the old system a voter just as plainly made known his allegiance when he attended a caucus. The provisions designed to prevent unscrupulous voters of one party from packing the other's caucus have been the weak points of every primary law yet drawn. The Boston *Transcript* compares the Luce law unfavorably in this respect with the statute just adopted by referendum in Wisconsin, which does not make the voter declare his party preference, but permits him to vote for candidates of only one party. Mr. Luce himself says that only a long trial can be expected to secure the results for which his bill was framed; but the Massachusetts cities are impatient.

"We should always remember with satisfaction that peace reigns in six-sevenths of the industrial world," wrote Andrew Carnegie in the address read before the Civic Federation on Thursday night. The other seventh is "exposed to successive and disastrous outbursts of war." That the word "war" is not purely metaphorical in this use is brought out by a compilation which Mr. Slason Thompson has prepared for the *Outlook* on the statistics of violence for two and a half years of strikes in this country. Mr. Thompson collected his data through the coöperation of trustworthy newspaper men in sixteen cities who examined the files of leading papers for reports of all strikes. Where the newspaper report used the word "several" the figure 2 was entered; where it said "many," 3 were added. As the table stands, though incomplete, it shows that deaths from violence incident to strikes were four-fifths as many as in the two days' fighting at El Caney and San Juan, while the injuries were actually one-third more numerous. There were in all 180 deaths, 1,651 injuries, and 5,533 arrests. The largest number of deaths was in Colorado, Illinois, and Pennsylvania; but New York is among the first three States in the number of injuries and of arrests, the figures from January 1, 1902, to June 30, 1904, being 4 kil'ed, 123 injured, and 1,010 arrested. No exact figures are available as to the number of striking workmen in this period, in which is included the building strike, with perhaps 100,000 men concerned, and the clothing strike with 30,000. A further analysis establishes the fact, which hardly needs statistical proof, that the deaths and injuries are chiefly inflicted on non-union men, while most of the arrests are of union strikers. Of the 180 killed, 116 were non-union men, 51 union strikers, and 13 officers. Of the 1,651 injured, 1,366 were non-union men, 151 union strikers, and 134 officers. On the other hand, of the 5,533 arrests 5,159, or nearly fourteen-fifteenths, were of union men. If we assume these proportions to hold good for New York State, about one striker out of every two hundred must have got himself arrested, while for about every 1,700 men on strike a non-union man was injured.

Mr. August Belmont, as a large employer of labor, was obviously on the eligible list for the presidency of the National Civic Federation. His election to succeed the late Mark Hanna is, however, something of a surprise. He may perhaps signalize his administration by reducing the amount of rather casual talk that has generally marked the proceedings. In fact, the danger of an organization that has merely advisory functions is of degenerating into an amiable circumlocution office. We do not underestimate the value of frank conference between employers, labor leaders, and prominent professional men; only good can come of it. Mr. Easley very justly pointed out on Thursday night that the problem of successful employment was largely one of the amenities of life. He instanced the happy condition of agricultural and domestic service—this over-hopefully, perhaps—in comparison with the more impersonal service of the mills and mines. Yet of incisiveness there was little in the proceedings. Mr. Mitchell's admission that the lockout is equally justifiable with the strike was candid and welcome; but the only thing that really struck fire was President Eliot's demand for "industrial peace with liberty." Upon the old-fashioned right of a man to bargain as an individual if he chooses, and to observe his own interests in the contract, he dwelt with his customary sturdiness. It was something of a dash of cold water at a late post-prandial period of this love feast, but who shall say that it was not more wholesome than the vague conciliatory expressions so common at these meetings?

M. Witte's large plan for reform of legislation affecting peasants is published at a significant moment. It offers the Czar an alternative course to acceptance of the zemstvo petition. Instead of sweeping reforms forced extra-officialiy upon his notice, he will be able to offer smaller but still important measures framed by his personal councillors. That may well be the meaning of the publication of Witte's plan shortly before the reply to the congress of zemstvo presidents. But it should not be assumed that the Czar will necessarily use the Witte proposals to give color to a complete refusal of the broader petition. There are within the zemstvo scheme, without accepting the radical demand for a parliament, numerous concessions that could be made—in fact some that Prince Mirsky has made in advance of the request. So the Czar would be short-sighted if, yielding to alarmist counsels of the reactionaries, he failed to give some recognition to the voice of his people as expressed by the zemstvoists. The numerous disorders, which in part seem to be due to *agents provocateurs* of the conservative faction, call loudly not for repression, but for some expression of liberal intentions towards an oppressed people, now coming to a dangerous stage of self-consciousness.

THE SENATORSHIP ET CETERA.

"Of course, the Legislature will decide who is to be Senator; but it is pretty sure to adopt Gov. Odell's suggestion." Thus spake William L. Ward, Republican boss of Westchester County. The reason why the Legislature is so ready to fall in with the Odell view is explained in another illuminating remark by Mr. Ward: "When Odell makes up his mind, he will tell me, and I will tell the boys up there, and I suppose they will vote as the Governor wishes." Thus our academic students of political science can see the very operation of that fundamental principle of a republic —"Governments derive their just powers from the consent of the Governor." Mr. Ward's Declaration of Dependence throws an interesting light on an article by Samuel P. Orth in the December *Atlantic*. Mr. Orth, after complaining that our legislatures are subject to much ridicule and denunciation, proceeds to show by statistics that there are in the membership imposing percentages of lawyers, merchants, honest farmers, college graduates, and self-educated men. Whence he justly concludes, "One must be profoundly impressed by the real representative character of these law-making bodies." The New York Legislature, at any rate, is the real representative of the Odell machine.

That machine has apparently determined upon Frank S. Black as the successor to Depew, for Black's candidacy has been boldly announced by his personal organ, the Troy *Times*. It kindly informs us that the ex-Governor has been "compelled" to this step "by the general request from Republicans in all parts of the State"—a spontaneous uprising of the marionettes. It is inconceivable that Black, after a show of holding back for several weeks, should now irrevocably enter the field unless he were assured of the support of the one man who can make and unmake United States Senators. And since Gov. Odell's shallow professions of impartiality have been unmasked and the last lingering doubt as to his purpose has been dispelled, the lawyers, merchants, honest farmers, college graduates, and self-educated men who form our august Legislature will exhibit their real representative character by cringing to the whip and licking the hand that strikes them.

In this critical juncture of his affairs, Senator Depew presents every appearance of being "chloroformed"—to use Gov. Odell's expressive phrase. As late as Saturday some of Mr. Depew's close advisers complacently declared their belief that Gov. Odell is not finally committed in this contest; that the numerous protests from friends of Depew are giving him pause; and that he may yet come out for Depew. All this recalls that pleasing oratorical figure of the vampire fanning its victim with its wings while it sucks the blood. What the most knowing politicians are saying is, "Sorry for poor Depew. He'll be disappointed, but he'll take his medicine with a smile, as he always does." The truth is, that the junior Senator is not the man for a knock-down and drag-out fight. Naturally amiable, he has acquired the habit of surrendering to the majority, or what he supposes is the majority; and at last he has seemingly lost the power of vigorous self-assertion. He has been shoved and hustled by bosses till he accepts their orders as part of the day's work. As the genial friend and well-wisher of everybody, he has for years been proclaiming a general amnesty in Sancho Panza's own terms: "I forgive all injuries, past, present, or to come, which I have already received, at this present time suffer, or may hereafter undergo, from any person, high or low, rich or poor, gentle or simple, without exception of rank or circumstance." These are Christian sentiments for any time of year, and especially for this happy Christmas season; but there is a possibility of being too complaisant. "Blessed are the meek," says Gov. Odell, "for they are an easy mark."

There is one other man who is not cutting a very heroic figure in this contest—Governor-elect Higgins. He is entirely willing to confess that he has a positive choice for the Senatorship, but this preference he steadfastly refuses to reveal. If he be working secretly for one side or the other, he will do well to come out of the subway and show himself in the open. If he feel that propriety forbids him to meddle in the controversy, he should remember that his own fate as well as Mr. Depew's is being decided in these so-called "conferences" with Gov. Odell. Before the election Mr. Higgins was very loud in his proclamation that he was "no man's man." "That," cried the admiring friends of Mr. Higgins, "is a plain notice to Odell to keep his hands off. Higgins will be the man at Albany." Yet there were skeptics who, granting Mr. Higgins's desire to maintain his independence, questioned his power. Odell was evidently to be master of the Legislature, and he might easily swathe the Governor in bandages till he should be as helpless as a mummy. The process is already well under way. If Gov. Higgins tamely yields while Odell disregards him in the choice of a United States Senator, he will be flouted by Odell in everything else. The Speaker of the Assembly will be Odell's Speaker; the committees of both houses will be Odell's committees; the officers of the State will be Odell's officers; the fate of bills, good and bad, will rest in Odell's hands; and Gov. Higgins, like it or not, will be forced to sit, a gentle and obedient child, in Odell's lap.

SENSATIONAL FOREIGN NEWS.

At an international gathering of journalists recently held in London, a Russian editor made a striking plea for sanity in handling foreign news. He condemned the habit of burdening the cables with casual expressions of that sensationalism which afflicts all nations. He showed how a spiteful or incendiary paragraph which would be quietly disregarded at home, might in a foreign country assume undue importance and stir up resentment. Naturally, he dwelt upon the great harm done in Russia by the repetition of the worst expressions of the British anti-Russian press, and, conversely, in England by the representation of Russia as the pariah of the nations. And, finally, he pleaded that editors and news-gatherers alike should work not to gratify international prejudices, but to foster good will between nations.

The evil here pointed out is undeniable. International news service—with the exception of the London *Times* (of late years, however, a sinner through chauvinism), the Rotterdam *Courant*, and a few papers of like grade—is often defective or positively bad. In part, the trouble is inevitable. Newspapers have personalities and prejudices. If we could imagine a New York daily of anti-German and pro-Russian proclivities borrowing its policy from the personal likes and dislikes of its proprietor, we should expect it to "play up" occasional foolish talk in the Reichstag though the speaker and the sentiment were of no consequence whatever. Many newspapers are what they are simply because the owner hates Jews or loves Free Masons, fears the negro unduly or a fall in stock-market prices. For these offences or aberrations there is no remedy except the moral one. But certain evils pointed out by our Russian editor to his British hosts lie in the exciting method of transmitting international news.

The increased use of the cable has added vastly to the quantity and promptness of the news, at the expense of its quality. The old-fashioned correspondent in the foreign capitals, with almost ambassadorial prestige and pay, has yielded to the mere routine gatherer of news items for an agency. In fact, no paper but the London *Times* to-day is served all over the world by its own correspondents; and the extraordinary completeness of its service results in the unhappy but natural result that most of the news we get of Europe, or Europe of itself, is merely the more or less intelligent condensation of London *Times* dispatches—that is, news filtered first through a British correspondent, next through a British editor, and next through a London correspondent before it reaches the home office. Of course, this process, far from clarifying the original matter, tends at least to give it

English coloring, and often leads to more serious misrepresentation, due to carelessness or ignorance as the dispatch is passed along.

For the frequent inaccuracy and occasional sensationalism of their agents the various news agencies should not be blamed unduly. They have the difficulty of serving many masters, and must in many cases transmit matter which they know to be dubious, committing it frankly to the discretion of all sorts and conditions of news editors. But the trouble comes, after all, less through the news agencies than through irresponsible correspondents of the sensational press. The positive dangers of such inflammatory gossip-mongering was illustrated strikingly before the Spanish war here; and if, in general, recklessness in the selection of foreign news is less harmful here than abroad, it is merely because our interest in European affairs is languid. But all that is changing. Diplomatic relations with the Old World must apparently grow closer and more complex, and the time will come when an incendiary press will not be merely demoralizing, but as dangerous here as in London or in Berlin.

Since this is a moral matter, radical improvement will come only with the general growth in intelligence and morality. The news agencies and the individual newspapers would undoubtedly give a more complete and accurate service if it paid. Wild-eyed editors at home would quickly "kill" incredible or merely trivial dispatches if people stopped reading the paper from disgust. But much can be done by suppressing absolutely pernicious items, or by putting up some danger signal where the reader is invited to skate over some thin ice of rumor. Such censorship is naturally defective. Yet how conscientious and how valuable this sifting process may be is not widely realized. Possibly, the production of a class of educated and scrupulous news editors would do most to curb the vagaries of yellow journalists at large. Let colleges of journalism bring forth men who can tell truth from rumor and news from gossip, and the skepticism with which these institutions are commonly greeted would soon cease. In any case, the duty of sobriety and accuracy in printing foreign news was never so great as in this day when the whole world is a whispering gallery.

THE CASE OF ADOLF BECK.

Miscarriages of justice are by no means uncommon, but the case of Adolf Beck, twice tried in England and once imprisoned on the same erroneous identification, is very remarkable. Generally, Justice forgets her impartial blindness for some irresistible motive: religion is involved, as in the case of Joan of Arc; high personages to be shielded, as in Capt. Kydd's mock trial; popular horror spreads to judges and jurymen, as in many a case of shocking crime or political assassination by a maniac. But in the Beck case there were present none of these manifestations of "crowd psychology."

The charge against this Swedish resident in London was merely petty fraud. A careful scrutiny of the court proceedings by the British Home Office has shown not only that there was no animus against the prisoner, but that all persons connected with the two trials acted regularly and in perfect good faith. The judges, the two sets of counsel, the two juries, may honestly say that under similar circumstances they would repeat their former action. Even the chief witnesses for the prosecution can reproach themselves only with a too great, though perfectly natural, willingness to see in a stranger in custody the rascal who had hoodwinked them. With none of these people lay the moral blame; but with the police court judge who entertained a trivial accusation in the first instance, with the police officers who strained every point to see in Mr. Beck the notorious confidence man Smith, with the officers who had recorded Smith's identification marks so carelessly that they even neglected to mention that he was a Jew; finally, with an unconscious conspiracy to back up the original error by browbeating witnesses and suppressing possible evidence against the Smith-alias-Beck theory. The French General Staff itself hardly bowed more supinely to the *chose jugée* than did English Bumbledom in this instance to its own infallibility.

To make the case clear, recall that Mr. Beck was originally a complainant. In December, 1895, standing in his own doorway, Victoria Street, he was accosted by a strange woman with the outcry, "What have you done with my watch?" He had her promptly arrested, and followed her to the police court, where the nature of the swindle alleged by the woman caused the police to jump to the conclusion that Beck was the malodorous Smith who eighteen years earlier had been sentenced to a term. Assuming this identification, the justice denied Mr. Beck's complaint and entertained the woman's. From that time it is a sorry story of attempts to prove that Beck was Smith. Note that there was no striking personal resemblance between the two. Yet many women, excited by the hope of getting their money back, confidently identified in Beck their cajoler. In court the police swore they saw on Beck's unscarred face the scars and birth-marks they had noted on Smith's. Finally, a reputable handwriting expert testified that Smith's handwriting was merely a disguised form of Beck's. And as if to crown the misfortunes of the unhappy defendant, the judge—led apparently by an honest desire not to prejudice the prisoner's case—ruled out all evidence as to the frauds of 1877, and therewith all direct discussion of the question of identity. In fact, so strong a web of sincere error was woven about the proceedings—the complainants had unquestionably been defrauded—that it is no wonder the jury found blameless Mr. Beck guilty and the judge sentenced him to seven years' penal servitude.

It was during this imprisonment that infallible officialdom appeared in its most sinister light. Mr. Beck's frequent petitions to the Home Office and the activities of the Swedish Minister brought uneasiness to all the hosts of Dogberrydom concerned. Suppose they were wrong, and Beck was not Smith? Beck must be Smith or the query of identity evaded. So they changed Mr. Beck's prison number, took away the label which in his capacity as a "second-termer" he had worn since his condemnation, and gave him that borne by first offenders. Thus it became more difficult to trace him or his grievance. Worse yet, some bungling and dishonest hand changed "dark" to "fresh" in the description of Smith's complexion, so that it might more nearly correspond to Beck's. To cut a painful matter short, Beck served his term and continued to work for a legal vindication. This he owed to the astounding good fortune of being rearrested this year on similar charges of fraud. Again he was stopped on the street by a woman victim of Smith's, again the case was tried without reference to the question of identity, again the judge was about to charge against the prisoner—when, lo! Smith in person, "dark," not "fresh," Jew not Swede. Thus it was only the scandal of a second trial that set the Home Office to investigating some of the devious byways of British justice, and only the happy advent of Smith that saved Beck from a second term at hard labor.

The whole fabric of judicial error comes down in the last analysis to the mistake of the woman who first accused Beck. To the police it never occurred that she could have taken an innocent stranger for her defrauder. The swindles for which Smith was condemned in 1877 and Beck arrested in 1895 were so unusual and so completely similar that it seemed impossible to doubt the same person was concerned in either case. And even the dogged persistence of the police in their identification, their prompting of witnesses, and staving off possible investigation—all were prompted by very simple motives of professional pride. They hated to give up Beck, just as a rather dogged or unlucky angler hesitates to return to the stream a fish just a hair short of the legal length. In such cases the creel or the prison gets the benefit of a large doubt, and the moral of the Beck case is much less that there should be

reform of British criminal procedure—a criminal court of appeals and the like—than that everywhere there should be constant vigilance to protect individuals against collective stupidity and colossal capacity for blundering in every officialdom that boasts itself above mistake.

AUSTRO-HUNGARIAN TROUBLES.

The renewal of the riotous tactics of the Opposition in the Lower House of the Hungarian Diet augurs ill for the ability of Count Tisza to maintain himself long against the united obstructionists. It is unlikely that the Premier's appeal from the passions of Parliament to the deliberate judgment of the people will save his Ministry. Yet it is clear that the violence of the Opposition is not sanctioned by the country, and that the temporary coalition of the Deákist, Count Julius Andrássy, the chauvinistic Nationalist, Count Albert Apponyi, the radical, Francis Kossuth, the ex-Premier, Baron Bánffy, and a number of prominent reactionaries, clericals, and independents, is doomed to end before long in humiliating discomfiture, no matter what may be the fate of Tisza himself.

The fury of the passions aroused by what seemed to be a mere question of reform of parliamentary procedure, becomes intelligible in the light of the action of the Opposition before and directly after the adoption of Count Tisza's proposal to hold night sessions. Like his predecessor, Koloman Szell, Tisza has had to face a deadlock which paralyzed the Government. The Opposition had resisted every effort of the Ministry to amend the rules of order. When Tisza finally moved an evening session of the Chamber, the Opposition protested that such a proposal was against the rules of the House. They denied the right of the Premier to put the motion to a vote, and left the Chamber in a body when the vote was ordered. Immediately after President Perczel had declared the motion carried, the Premier read a royal decree closing the session of the Diet. Thereupon the members of the Opposition issued an address to the throne, drawn up by Count Apponyi, which charged the Prime Minister and the President of the Chamber with having "laid a sacrilegious hand upon the constitutional guarantees whose inviolability your Majesty had solemnly sworn to respect, and which are the sole basis of your Majesty's power." The signers asked the King to entrust the Government to those more faithful to the Constitution.

This appeal to the Crown, Count Tisza very effectively seized upon, in an address before a meeting of citizens of Budapest, as in itself a violation of the Constitution. He acknowledged that, while he might have violated the letter of the law, he did so in order to protect the Constitution against those who would make its working impossible. The force of his argument cannot be denied, for the logic of such appeals as Apponyi and his followers intend to make to the electorate would, through defiance of the wishes of the majority of the Diet, lead to a refusal to pay taxes or obey a call for recruits—in other words, to open revolution. The Prime Minister has, however, sustained a far severer blow than the temporary withdrawal of such men as Count Andrássy from the Liberal party, in the resignation, as a member of Parliament, of Tisza's predecessor, Koloman Szell. The ex-Minister is a serious, moderate, and patriotic statesman, who, while in office, counselled passive resistance to obstruction. When Tisza unexpectedly succeeded him by what he could not help considering an act of treachery, Szell at first warmly supported the new Premier, but finally withdrew to his estate, and has since taken little interest in public affairs. He now justifies his quitting Parliament in a letter to his constituents declaring that, while he considers a revision of parliamentary rules necessary, he deprecates the impatience and arbitrariness of the Government, which virtually amount to an infraction of the Constitution.

The attitude of the King towards the Hungarian Premier is uncompromisingly favorable, and there is little doubt that the veiled anti-dynastic threat in Apponyi's address, and the more or less open agitation of the Kossuth party in favor of a separation of Hungary from Austria, will fail of their effect on the masses. They, whatever their political differences, are loyal to the King. Count Tisza has very justly characterized the tactics of the Opposition as "borrowed from Cisleithania," where attacks on the dynasty are becoming more and more frequent. Nor are they confined to the German liberals and radicals. Extremes meet in the Vienna Reichsrath, as in the Hungarian Diet, and quite recently two such opposite spokesmen of their respective parties as the ignorant and erratic Czech Agrarian, Count Sternberg, and the highly cultured and eminently respectable Social-Democrat Pernerstorfer (a former professor of history), indulged in denunciations of the Hapsburg dynasty the only parallel to which can be found in the debates of the Convention preceding the sentence of Louis XVI. and Marie Antoinette.

Perhaps the most significant fact in connection with these assaults is the apathy with which the House received them. A mild call to order, on the part of the President, a perfunctory protest of the leader of the Polish Conservatives, Count Dzieduszycki, were the only answer to Pernerstorfer's arraignment of the house of Hapsburg, its idle and dissolute men, and its ignorant and priest-ridden women. The speaker, it is true, distinctly disavowed any intention of reflecting on the person of the sovereign, but can even the age and the personal popularity of Francis Joseph long shield him from the ultimate consequences of an agitation whose war-cry, "Los von Rom!" is now turning into the more ominous "Los von Oesterreich"? But what may portend disruption in Cisleithania foretells in Hungary, in spite of the present tumult and temporary confusion, only the growing national aspirations of an intensely patriotic people, united in their ultimate aims. It is true of the Hungary of to-day, as it was when Gibbon wrote, that "arms and freedom have ever been the ruling, though often the unsuccessful passion of the Hungarians, who are endowed by nature with a vigorous constitution of soul and body."

A BRILLIANT NAVAL CAMPAIGN.

With the partial sinking of the battleship *Sevastopol*, the Japanese naval victory in the East is complete. So thoroughgoing has the work been that the dispatch announcing the success of the Japanese torpedo-boat attacks on the last Russian battleship above water at Port Arthur concludes laconically, "Admiral Togo's ships will now go into dock." It means for his fleet the ending of the long and wearying vigil begun on February 8 last, for the patrolling of the harbor can now well be left to torpedo-boats. Even should blockade-runners succeed in making the port, they will be exposed to the merciless fire of Gen. Nogi's naval batteries on 203-Metre Hill. The first phase of the naval war is at an end. Before the next begins there must be an interim of at least two months.

During ten months of active service the Japanese have practically wiped out the strongest fleet in the East, consisting of seven battleships—one more than Japan possessed—four armored cruisers, seven protected cruisers, eight unprotected cruisers and dispatch boats, several gunboats, twenty-four torpedo-boat destroyers, and twelve torpedo-boats. They began by assailing the Russian fleet in Port Arthur on February 8, and torpedoing the battleships *Retvizan*, *Poltava*, and *Tsesarevitch*, and the cruisers *Pallada*, *Novik*, *Askold*, and *Diana*. The result was to make a sortie impossible for many months. The next day they sank the American-built cruiser *Variag* and the torpedo gunboat *Korietz*, off Chemulpo, in what is still for the Russians the pluckiest fight of the war, their vessels going out to certain destruction with unsurpassed courage and determination. In quick succession the Russian torpedo transport *Yenesei*, and the second-class cruiser *Boyarin* sank on February 11th and 13th, as the result of striking Russian mines. A terrible blow befell the Port Arthur

fleet on April 13, by the sinking of the battleship *Petropavlovsk* with their great Admiral, Makharoff, on board. Meanwhile, the torpedo-boat destroyers rapidly decreased in numbers, one being sunk on March 11, another on March 16, and a third on April 13. Three more of these small vessels escaped to Kiaochou on August 12, and were dismantled there. The *Ryeshitelni* was captured on August 13 at Chefoo and the *Rastoropny* was blown up at the same port on November 15 by her own crew.

On August 11 came the unsuccessful sortie from Port Arthur. In the ensuing battle no ships were sunk on either side, but the Russian ships, after being terribly punished, fled in various directions The battleship *Tsesarevitch* was dismantled at Kiaochou; the protected cruiser *Askold* and the destroyer *Grozovoi* at Shanghai, where the gunboat *Mandzhur* had been disarmed early in the war; and the protected cruiser *Diana* at Saigon on September 6. The gunboat *Sivutch* was scuttled in the Niuchwang River in July, and one of the *Otvazhni* class was sunk by a mine on August 18. The cruiser *Novik* succeeded in reaching the port of Korsakovsk on the island of Saghalien, but she was there caught and sunk by two Japanese cruisers on August 20. About this time three of the four armored cruisers, comprising the Vladivostok squadron, had been overtaken by Admiral Kamimura, with the result that the *Rurik* was sunk. The *Bogatyr* was previously run on the rocks at the entrance to Vladivostok, from which place the *Gromoboi* has also been reported disabled. Every officer on her and the *Rossia* had been killed or wounded when they finally reached port after the encounter with Kamimura. The unprotected cruiser *Lena* was dismantled at San Francisco on September 15. The ships just placed *hors de combat* at Port Arthur are the battleships *Poltava*, *Sevastopol*, *Peresviet*, and *Pobieda*, and the *Retvizan;* the armored cruiser *Bayan;* the protected cruiser *Giliak;* the hospital ship *Amur*, and, presumably, the remaining destroyers.

This extraordinary result has been achieved with a loss to the Japanese of one battleship, the *Hatsuse*, two protected cruisers, the *Yoshino* and *Saiyen;* the gunboats *Kaimon* and *Heiyen*, the dispatch-boat *Miyako*, and several torpedo-boats and destroyers. The sinking of the *Adsuma*, one of the best of the armored cruisers, has been alleged by the Russians, but only the ships mentioned have been officially admitted lost by the Japanese. Remarkable is the fact that of these six large Japanese vessels, not a single one succumbed to Russian gunfire, and only two Russian vessels of any size have been destroyed by the guns of the enemy's ships. Unique as is this war in many respects, it must always remain notable for the great damage inflicted on both sides by floating mines. The decision of the Russian ships left at Port Arthur not to attempt a sortie can be explained on two grounds: either they had been stripped of guns and men to assist in the repelling of the land attacks, or they had never been able to repair the very severe damages inflicted upon them on August 11. One thing is plainly established: the handling of the fleet after the death of Makharoff was of the very worst, and must encourage the Japanese in thinking that, whatever the paper superiority of the Baltic fleet, they cannot fail to be victorious over such inefficient and ill-trained officers and crews as plainly comprise the bulk of the Russian navy.

All in all, the Japanese have added a wonderful chapter to naval history. They have made mistakes, and some of those, like the license to destroy given to the Vladivostok squadron, have cost them dear. Had they not taken the Russians unawares at the very beginning, the war might have gone differently. But this reflects again only on the Russians. Togo's and Kamimura's men have shown a dash, a determination, and a courage which have compelled universal admiration. Moreover, their Oriental readiness to die has not for a moment led them to risk unnecessarily their precious vessels. Their long-range fighting on August 11th is fully explained by their knowledge that they had no battleship reserves. The pity of it is, from their point of view, that this caution was necessary. Had they been able to close in, much of the terrible slaughter around Port Arthur would have been prevented.

FORM AND SUBSTANCE IN THE MEXICAN REPUBLIC.

MEXICO, December 15, 1904.

In one of his recent lectures at the Lowell Institute Mr. James Bryce remarked that the Spanish-American republics are in no sense examples of self-governing countries. In this respect, the view of the student coincides entirely with that of Americans and other foreigners resident in these so-called republics. But Mr. Bryce went on further to express the belief that this condition arises not from an inherent lack of capacity for self-government, but from the defective state of the masses in these countries and the faulty régime, mental, social, and economical, which their upper class inherited from the period of Spanish tutelage. This is not the view of rampant "Anglo-Saxonism," which often appears in the undiplomatically expressed contempt of the American resident in Mexico or the South American republics, and which regards self-government as the peculiar property of one God-favored race, or blend of northern races, and condemns the Spanish-Americans either as Spaniards or as "niggers," or as mongrels of both, and hence unfit on all counts for the free institutions of the Anglo-Saxon.

Where race-feeling speaks in this fashion, there is rarely present in its exponent either the equipment of education or the judicial turn of mind which alone permits of real tolerance, and which would let him take into account the influences of environment and social education that, to Mr. Bryce's notion, excuse the Spanish-American for much in him to-day that is defective, and give hope for a future career for him as a real "citizen of the republic." Race prejudice, which commonly appeals to an "inherent sense of superiority," brooks no argument on such grounds. There is, indeed, here and there an American who, when visiting these republics, recalls that self-government is not yet perfect in the United States; here and there one who, having had some experience in Mexico or the Argentine Republic or one of the few other of these governments where stability and order have been attained in recent years, frankly owns to a preference for "benevolent despotism." And truly this foremost of the "benevolent despotisms" of Spanish-America (for Mexico is quite unanimously put at the head of the list) can claim adequate preparation for a career in self-government in only one respect, though that is fundamentally essential, viz., the maintenance of stability. Public opinion, in its proper sense, applying not merely to the expressions of a dominating class, will be possible only when the masses are better educated. There is a system by which it might make itself felt, were it intelligent and energetic enough to do so, in the carefully designed election machinery of the Mexican Constitution; but the very inability of the Mexican masses to handle that machinery intelligently has made the elections a farce.

There cannot be an independent judiciary, no matter how its members are chosen, where the executive power so dominates all others as it does in Mexico. The Federal judges are elected, while for the most part those of the State courts are appointed by the Governor; but, elected or appointed, they all owe their position to the power above, which is the Executive. The legislative power is in the same position of subordination, although perhaps somewhat more immediately so than the judiciary. The latter, however, is, if anything, ranked in dignity by the legislative branch of government; inevitably, there is a lack of that respect for the prestige of the courts which alone can give their decisions great weight. In the final analysis, indeed, these decisions and their enforcement rest with the Executive, which is not above taking a hand in the making of them if occasion seems to require or the proper influence is exerted. Note the following personal letter from the Governor of a State to a judge of a civil court in one of its districts, in regard to a case involving the settlement of an estate:

"I have received word that in the court under your charge there is being conducted the settlement of the ——— estate, wherefore I venture to recommend you to endeavor to terminate this matter with the greatest celerity possible and as justice demands. Your affectionate brother[-lawyer], friend, and trusty servant," etc.

To be sure, this case involved the rights of a citizen of another country, and the court had been unusually dilatory in handling it; moreover, in writing this personal letter to the judge at the request of an in-

terested party, the Governor took occasion to remark that the Executive exercised ordinarily no control over the judiciary, and he was departing from the rule in this case only because the rights of foreigners were affected. Nevertheless, where possible in one case, such interference is, of course, not improbable in all; and there is sure to be pressure of a less tangible sort upon a judge when he knows that a party to a suit before him is "close to" the executive power.

This exaltation of the Executive (who, indeed, in the municipalities, combines the powers of mayor with those of chief of police and of police-judge) is not merely the outgrowth of conditions which have, during the last quarter-century, under a strong Executive in Mexico, tended to the centralization of power in order to maintain quiet, protect property, and invite foreign investments. It is an inheritance from the Spanish régime, when government was entirely in the hands of the officials directly responsible to the Viceroy, and the Viceroy was himself the representative of the King. To this extent Mr. Bryce's ascription of present unfitness for self-government to an inherited environment is justified by the facts of history. Wherever Spain has been, the vital idea of government is still that of absolute authority, whether it be that of a president-dictator or the *jefe* of the smallest outlying *barrio*.

Theoretically, the legislative power in Mexico is separate from and independent of the Executive; practically, it is the latter power which decides who shall be members of the Federal Congress and the State Legislatures, and which does the real work of law-making, sending bills to the Legislature or promulgating decrees directly in pursuance of a legislative resolution abdicating control over laws regarding a special matter or an entire subject. The latest tariff law of Mexico was enacted by a decree of President Diaz, and on thirty days' notice (some of its schedules, indeed, being put into effect five days after publication). The recent issuance of $40,000,000 in bonds was made by the President in consequence of a resolution of Congress two years ago authorizing such action when he deemed it necessary. So, also, the bond issues and the other important steps connected with the acquiring by the Mexican Government last year of a controlling interest in three trunk lines of railroad, and the consolidation of these lines into a quasi-governmental system, were all negotiated, down to the final details, before any news of the project was transmitted to Congress; moreover, the matter was not discussed in Congress beyond the reading of the Finance Minister's message, the necessary legislative authority being given without question. Congress is a mere automaton, by which certain forms specified by the Constitution are ceremoniously complied with. Very few of its members come from the districts which they represent, but they are lawyers of the capital, Federal officeholders, etc., who find pleasure in the empty honors of their position, and only in rare cases even think of the Legislature as being the repository of real power in a popular government. So, in the State capitals, hardly a member of the Legislature is a resident of the district for which he is elected with all due formality. Nearly all are lawyers of the capital, addicted to the faction in power, and sometimes half of them are executive officeholders of one sort and another. The Constitution forbids the holding of a seat in the Legislature by an executive officer, unless by special vote of that body itself; at the beginning of each session, whether of Federal Congress or of State Legislature, there is a batch of resolutions to put through, each dealing with such a special case of exemption.

The idea of ministerial responsibility is not recognized in the Mexican Constitution; if it were, the close connection between the Executive and legislative authority might appear at least to be more logical, though there could be but the merest show of "responsible government" where parties are almost suppressed—an open anti-Government party being "seditious"—and where the Legislature is merely the echo of the President or of the State Governor. Still, there is an informal recognition of the right of the Executive to be heard in the halls of legislation. President Diaz reads his messages to Congress; similarly, the Governors of the States. The members of the President's Cabinet address their bills direct to Congress. In most of the States, the Secretary of the State Government (who is virtually the Governor's personal representative as well as secretary) has a seat in the Legislature whenever desired, and a voice in explanation of Executive policy, though not a vote. Practically, he is the Governor's messenger in directing what is to be "put through," and how. Let us take the record of an ordinary session of a State Legislature.

The official gazette of one of the States of Mexico, for instance, shows as one day's record of its Legislature the following: Special permission granted to two legislators to serve as executive employees of the State, one as president of a State institution of education; confirmation of a contract signed by the Governor exempting a mining company from taxation on a new mill for a certain period of years; the acknowledgment of notes of courtesy from two other State legislatures (in far distant States), conveying the information that their sessions had opened; ackhowledgment of the note of information from a Federal Cabinet officer in Mexico City of the appointment of a new assistant secretary in his department, with a specimen of his official signature; the listening to and thanking a legislator who had found an old volume belonging to the Legislature for sale in the market, and had restored it to the library. And this was a rather unusually busy session. The Legislature is provided with an elaborate set of rules, but almost all of them have to do with official formalities of one sort and another, and the rules governing discussion are very brief. They provide that no individual can occupy more than a half-hour of time, except by special vote, and only the mover of a bill or resolution, and the members of the committee which has considered it, can speak more than twice on it. Ordinary sessions are not to last more than two hours, except by special vote; in fact, they rarely last half that time. There are two sessions per year, each lasting three months. The Legislature of a State generally having but one house and only from twelve to thirty members, all residing in the capital, is easily kept together. When it is not officially in session, there is always the "permanent deputation," composed of three members (with two substitutes), who have all the powers of the Legislature in routine matters, though not supposed to be able to pass anything having the effect of a general law. This idea is one borrowed from Spanish Parliamentary methods early in the nineteenth century, and is a feature of all Spanish-American constitutions. Primarily, the idea was one of suspicion, *i. e.*, to keep a watch on the Executive, to see that he did not usurp functions during the recess of the Legislature, which was thus given theoretically a continuous life.

Some of the State legislatures choose a chairman and vice-chairman every month. While in the chair, however, the presiding officer has a wide scope of power; he generally names the committees (though sometimes they are chosen by ballot), he has full decision as to what committee shall consider any matter presented to the house, and he settles the order of discussion. The idea of placing power for action within the hands of a sole authority follows even into the halls of legislation. Only the Governor and the superior judges of a State, the Federal officials, and the officials of other States can address the Legislature officially—which means that others must put the stamps prescribed by the revenue law on their petitions, or they will go into the waste-basket.

The ceremonial for the opening of the Legislature is prescribed in minute detail; so, also, for the taking of the oath by the Governor and by the judges of the Supreme Court, the Governor being seated to the right of the presiding officer, while the Legislators must stand until he is seated and stand with him during the taking of the oath, which is, for all Government officials, as follows:

"Do you swear, without any reservation, to maintain and protect the maintenance of the Political Constitution of the Mexican United States, the additions and amendments decreed on the 25th of September of 1873, and the special Constitution of the State, and to comply with the duties of your office?"

"Yes, I swear."

"If you do so, may the Nation and the State reward you, and, if not, may they require account of you for it."

The same tendency toward centralization of power is to be noted in regard to educational institutions conducted by the Government. The State superintendents of education are directly subject to the Governor, by appointment and by his virtual regulation of the sums allotted to their department. If there is a State law school or secondary school, even its rules and regulations are often promulgated by the Governor, if not actually prescribed by him. The rules of one such institution in point allow to the director the "authority" to appoint and remove freely the *major-domo* and the servants, but absolutely nothing beyond that rests solely upon his initiative. The suspicion that characterizes all Spanish law and administration, the setting one man to watch another, appears even here. It is specifically provided that the director must remain on the place at least one hour in the morning and one in the afternoon, besides the time occupied by his own classes. There is a special inspector, too, to watch over discipline, with two assistants, called "monitors." Where a superior school for

girls is provided, the rules multiply, and, besides the female teachers and inspectors, there is commonly a male "visitor," known as the "commissioner of vigilance." Girls' schools are hedged about with great cautiousness of rules, and mixed schools are still looked upon with suspicion in Mexico, even for primary instruction.

So much in support of the statement of Mr. Bryce that the Spanish-American "republics" are not self-governing countries; evidence of the sort could easily be multiplied. It is not so easy to find positive evidence supporting his opinion that progress toward real self-government is to be expected in these countries. Yet it will have been noted that the defects and arbitrarinesses of government mentioned above do, indeed, appear to have their source in the inherited Spanish social and political organism.

Correspondence.

THE CULTURAL FEATURES OF THE ST. LOUIS EXPOSITION.

To the Editor of The Nation:

Sir: There is always something tragic in the destruction of a thing of beauty; and if its life has lasted only a short six months and has, during that period, been a source of joy and instruction to millions of people, and has brought to each of them messages of the highest culture, the regret at its evanescence becomes so much keener. Such is the feeling of the sentimentalist when he sees the imposing and graceful structures of the St. Louis Exposition being levelled to the ground, its grand sculptures effaced, its beautiful gardens and landscapes trod upon by teams and laborers, and dust, lime and refuse disfiguring what was once a laughing, gay and inspiring aggregation of wonders. The philosopher, however, views it simply as one of the things mortal that were predestined to die, and raises the question, Was it worth living, and, having ceased to live, what permanent achievements has it left behind? From this point of view, it may be well to present to your readers not an apotheosis, but rather an apologue of what the St. Louis Exposition has stood for in the line of thought and information.

One of your correspondents, several weeks ago, in describing the St. Louis Fair, gave it as his opinion that one Exposition was like every other; that St. Louis presented the same "show" as did Chicago, Buffalo and Paris; and that its only claim to a difference was its size—in acres—since in every other respect it was only an imitation. In a recent issue of the *Nation* you seem to concur in this view. It is, therefore, a legitimate inquiry to ask what was original and unique at this Exposition, and what were the features it presented that no others did or could, what new sources of information it revealed, and what new fields of thought it opened to the searcher after truth and knowledge.

I will enumerate among these, first of all, the Palace of Education. In all former Expositions there had been educational exhibits of great significance, selected with care, and intended to present the latest and most modern advance in pedagogic science, but these were scattered among the buildings assigned to each country or State. They stood side by side with their other exhibits, industrial, mechanical, or artistic. The inquiring educator had to make the rounds of the different countries for information as to what advances had been made in his line. There was no aggregation, no juxtaposition for the purpose of comparison, no *ensemble*, to study the various methods and appliances. All was different in St. Louis. A veritable palace, in classic design, was constructed for the housing of the educational exhibits (and no others) of all countries, States, and cities, for all the large colleges and art schools, as well as for the manufacturers of school furniture and equipments, of maps and globes, of models for school buildings, of biological, botanical, and mineral specimens for objective teaching, and, finally, of schoolbooks in all languages of the world. Thus there were aggregated in one building, covering over five acres, the gist and essence of the stride which the public schools and colleges, the education of the blind, deaf, and dumb, the course of manual training, and of the kindergarten, the production of physical apparatus and instruments of precision, and finally the objective method of teaching, had made all over the world. No such opportunity for comparative study, for the accurate measuring of the merits of the different methods, systems, theories, and practices, and no such all-embracing pedagogic information had been furnished to the student and teacher. If we add that every country seemed to vie with every other and the United States, to present not only the best, but also the truest of its educational methods and institutions, and that they were all on one floor and in one vast, though admirably arranged, space, we are safe in saying that, in this one most important respect, the St. Louis Exposition presented a feature that no others did.

Another distinct and original feature which furnished to nineteen millions of people—this having been, within a fraction, the number of admissions—ocular information which they never could have obtained in any other way, was the exposition of the Philippines. Since our country is now, alas, committed to the governing and caretaking of the people of these islands, it was of the highest usefulness to our people that they should, in actual presentation, be made acquainted with the most prominent types of Philippine men and women, with their habits, their mode of living, with their intellectual condition prior to the American guardianship, and their intellectual progress since. There is no doubt that new light has been thrown on the possibilities of this new "acquisition," and that the genuine, unadulterated, and realistic presentation of the scale of humanity from the naked Igorote to the highly civilized mestizo went far to instruct our law-makers and their constituents on the problem how best to govern this distant country.

The essence of this exhibition may be summed up as follows: There were five of the original types of islanders, men, women, and children, about one hundred of each, represented, to wit: Negritos, Igorotes, Bogobos, Moros, and Visayans. Each had its distinct village, laid out exactly as at their homes. They built their own bamboo houses in sight of the visitors; and the skill, ingenuity, and rapidity with which they did it was remarkable. The Moro houses were built in a large lake which had been specially provided for in the lay-out, resting on bamboo piles, and the interior cunningly arranged in two to three rooms, with kitchen and closets. Every part of these houses, roof, sides, and interiors, even the ladders over which only they could be reached, were made of bamboo, joined with bamboo cleats, and tied with bamboo strings. Models of all sorts of canoes and quite a large ship with bamboo sails were moored on the lake.

Passing over the exhibitions of dancing, singing, wrestling, and fighting (a sham bolo fight was an almost daily performance) given by each of these tribes in their specific ways, passing further over the sickening exhibition of the Igorotes killing a dog daily for their meals, and waiving a description of picturesque Manila and its city walls with the stone bridge leading to it, all perfectly and truthfully modelled, two distinct departments attracted the attention of the observer on account of their economic and social significance. These were the exhibitions of the products of the islands in one building, and a Philippine school in actual operation occupying another building constructed in the style of the Manila Cathedral. Of the products, the manufactured ones, considering the newness of the civilization, were, excepting that of rope, naturally of little significance. But the wealth of raw material was imposing. Specimens of timber, stone, and minerals, tobacco, grains, marble, indigo, coffee, and rubber plants pointed distinctly to the inducements which these islands offer to development by capital. The school itself was a revelation. To see these half-naked, half-savage boys and girls spell, recite and sing in English, to observe the method employed by the teachers, the gay interest of the pupils and their good manners, one could not help praising the Administration for what it had accomplished. However sincerely we Mugwumps may deplore the as yet indefinable burden which the Spanish war and the resultant fathership of the Philippines has imposed upon us, the candid observer must confess that, in the educational line at least, this *fait accompli* has been met by the authorities in an intelligent and effective way. The schoolmaster is evidently abroad in the islands, and wherever he goes civilization marks his trail. I was told that the Filipinos had learned more English in the last three years than they had learned Spanish in the preceding three hundred years.

A third feature of the Exposition which has not had a counterpart in any previous one, and which served a highly intelligent and sociological purpose, was the "Model City." The idea of this originated with the Civic Improvement League of this city, with the intention of bringing about a display of the best municipal buildings, actual and designed, of the various methods of street paving, of public nurseries, children's playgrounds, parks, etc. This was very happily carried out. A street, about half a mile in length, was lined on each side with beautiful staff structures designed for town halls, guild halls, casinos, etc., a large and simply, though tastefully, arranged nursery and playgrounds in park fashion, which were continually thronged with gay and happy children whose parent visitors had entrusted them there for safe

keeping, presented an inspiriting sight. New York, San Francisco and Kansas City contributed instructive specimens. The New York building contained exact models, on a large scale, of its ancient City Hall, of the new Tombs with the arrangement of prison cells, of the rapid-transit subway complete and in various stages of construction, and of the Brooklyn and Williamsburgh bridges. The latter were delightfully true, and showed the shapes of the various members—girders, braces, eyeplates, anchorage of ropes and chains—in a way which every unprofessional visitor could comprehend. A pleasing memorial to a departed artist who had made the adornment of cities his life study, was erected on the south side of the Model City street by Mr. Albert Kelsey, an architect of Philadelphia, in the shape of a beautiful Town Hall, of chaste design, on the front of which was the largely lettered inscription:

THE CIVIC PRIDE MONUMENT
IN MEMORY OF
CHARLES ELIOT, LANDSCAPE ARTIST

—thus honoring the memory of the gifted son of an eminent father.

I have mentioned these three exhibits as having been unique in the line of culture and in the presentation of valuable knowledge. But one of the most important incidents of the Exposition was the arrangement for congresses and conventions of a purely scientific character. Foremost among these was the "International Congress of Arts and Sciences," which convened in the week September 19-25, and was attended by the most eminent thinkers and scientists of this country and Europe. Of this the *Nation* gave a preliminary account. The invited delegates were selected from among the most intellectual forces in their respective spheres of this country and Europe, and, surely, there never was a finer array of the flower of scientists and thinkers assembled. Altogether, 459 names appeared on the official list, of whom there were 135 from abroad (including two from Japan and one from Mexico) and the remainder from the United States. To each one, except to the chairmen, the subject pertaining to his specialty, on which he was expected to address the convention, was assigned. The occasion was productive of deliverances of lasting importance, and it has been resolved by the Exposition Directory to publish the proceedings and all the papers read at the convention, under the editorship of Prof. Howard J. Rogers, the able director of the Congress. Among the vast number of eminent foreigners who were present, only a few can here be mentioned, such as the Right Hon. James Bryce and Sir William Ramsay of London, Professors Harnack and Delitzsch of Berlin, Picard, Lévy, and Brunetière of Paris, Vámbéry of Budapest, Conrad of Halle, Zorn of Bonn, Lombroso of Turin, etc. It may not be known that the Exposition Directory paid to each delegate an honorarium of $500, and equipped a comfortable dormitory in the Library building of Washington University, close to the Hall of Congresses, free, for their accommodation. But only a few had occasion to avail themselves of the latter, as most of them were entertained, during their whole stay, by the hospitable citizens of St. Louis at their homes.

Of the many other conventions for the discussion of special branches of knowledge, only a few can be mentioned, such as the meeting of the National Educational Association, of the Electrical Engineers, of the Lawyers and Jurists, under the auspices of the American Bar Association; the International Press Parliament, the Peace Congress, at which almost every country in Europe was represented, and at which Count Apponyi made his famous address, and, finally, the International Engineers' Association, which met under the auspices of the American Society of Civil Engineers. This was one of the notable meetings, largely attended by the most eminent engineers of the foreign and home societies, and was productive of addresses and papers and discussions thereon of a solid character, which were ordered to be published and will fill several volumes.

It may be fairly contended, from this necessarily limited résumé of the intellectual features of the St. Louis Exposition, that it has been of lasting value. W. T.

St. Louis, December 15, 1904.

LITERACY IN THE PHILIPPINES.

To the Editor of The Nation:

Sir: I find in Prof. Juan Sumulong's discussion of the "Philippine Problem" in the *North American Review* for December the following statement:

"The Filipino people has received under Spain not an Oriental but a European education, which has brought into being a body of men capable of directing the government of the country. It has often been said that the great majority of the population lack not only political experience, but even the most elementary education. But this last is not a correct statement, for, apart from Spanish, the Filipinos who cannot at least read and write their own dialect are few and rare indeed."

Is it possible that this is true, and that Mr. Alleyne Ireland is in error when he says, in his article on the same subject in the *Atlantic Monthly* for November: "There is a small educated class, but 90 per cent. of the population can neither read nor write"? James Mascarene Hubbard.

Boston, December 14, 1904.

CHOPIN'S LEFT HAND.

To the Editor of The Nation:

Sir: Many musicians and other people will be startled by your critic's assertion that "Chopin exerted as great an influence on the musical world as Beethoven did," Being an enthusiastic admirer of Chopin, I will leave somebody else to challenge that statement; but as the same critic wonders that "Mr. Dannreuther could accept the preposterous notion that Chopin kept strict time with his left hand and confined his *tempo rubato* to the right hand," I should like to mention the testimony of two gentlemen who heard Chopin at a concert in Paris in 1842-43. They were both excellent amateur musicians and performers, but too exclusively disciples of the classic school to be carried away by Chopin's eccentric and modern genius; what they spoke of above everything was his "extraordinary left hand," which maintained a perfectly even, steady movement, entirely independent of the other. This was what impressed them most in Chopin's playing, and I have often heard them mention it. Both of them had frequently heard Thalberg, Liszt, and other less famous pianists of those and later times.

Yours respectfully, S. B. W.

Philadelphia, December 12, 1904.

[We are quite prepared to hear that some readers were startled by our assertion that Chopin exerted as great an influence on the musical world as Beethoven did, but they will have to get used to it, for it is undoubtedly true. In pianoforte music, and in the realm of harmony and modulation, Chopin's influence has, indeed, been much greater. Beethoven's influence practically ceased half a century ago; since that time Schubert, Chopin, and Wagner have predominated. As for Chopin's *tempo rubato*, it is possible that he may have urged his French and German pupils to play in strict time, because their attempts at *rubato* were likely to degenerate into caricatures. But that he, the incarnation of poetic freedom of motion, should have played with metronomic precision is simply inconceivable. Berlioz's testimony that "Chopin could not play strictly in time" (*ne pouvait pas jouer régulièrement*) is worth more than that of any number of pupils. How the unwary may have been deceived is illustrated in the case of Paderewski when he plays a Chopin mazurka. His freedom of movement is so natural, so unconscious, that one might easily suppose he was playing in strict time; but any metronome trying to keep pace with his hand—right or left—would soon be landed in a madhouse. He plays Schubert and other composers in the same way. Indeed, at present all the leading pianists and orchestral conductors play even Bach and Beethoven in defiance of the metronome; and to suppose that Chopin followed it slavishly is, as we said, preposterous.—Ed. Nation.]

SCHUBERT'S (?) "ABSCHIED."

To the Editor of The Nation:

Sir: In Mr. Henry T. Finck's otherwise excellent selection of 'Fifty Songs by Franz Schubert,' noticed in your issue of December 8 (No. 2058), I fail to find the pathetic "Last Greeting" ("Abschied"). Could not something have made way for this, or might we not have had a 'Fifty and One Songs'?

L. S. N.

December 16, 1904.

[The "Abschied" ("Schon naht, um uns zu scheiden") is a beautiful song, quite worthy of Schubert and generally attributed to him (it may be found, *e. g.*, in the 'Schubert Album,' published by Novello, Ewer & Co., and in the Schirmer collection); but it was not composed by the creator of the "Erlking." Neither of the two great German authorities on Schubert—Mandyczewski and Friedländer—includes it in his edition of the Collected Works of that composer.—Ed. Nation.]

BOOK "GUESSING."

TO THE EDITOR OF THE NATION:

SIR: The suggestion of Mr. McBryde, in No. 2059 of the *Nation*, that the guessing contest proposed by Messrs. Merrill & Baker in relation to books is "a problem requiring no skill and no literary judgment, but depending altogether upon chance," leads me to quote from a letter from a young friend on the same subject: "All we had to go on was the amount of use the books had received in the ———, ———, and ——— libraries, but I suppose that would hardly stand, as people would be likely to buy different books from those they would draw from a circulating library. On this supposition we chose without hesitation [here followed the list]."

It would appear that in this case both skill and judgment were used—how successfully remains to be seen—and that others who ignore such precautions are less likely to be prize-winners. The letter, written 12th instant in familiar friendship, was preserved by chance, but is quoted literally, and is good evidence that mere luck is not depended upon by every one in forming the estimate. W.

PRINCETON, December 17, 1904.

Notes.

Houghton, Mifflin & Co., who have just concluded the admirable Centenary Edition of Emerson's Works, annotated by his son, Dr. Edward W. Emerson, in twelve volumes, are to publish directly 'The Hawthorne Centenary at the Wayside, Concord, Mass., July 4-7, 1904,' with the proceedings in full; and in the spring a 'Bibliography of Hawthorne,' by Miss Nina E. Browne of the Boston Athenæum. They also promise a revised edition of Oscar Fay Adams's 'Dictionary of American Authors,' amounting nearly to ten thousand names.

Dodd, Mead & Co. publish a taking little facsimile of the first (1597) edition of Bacon's Essays from the rare copy in the British Museum. The Essays proper, here only ten in number, really fill out less than a third of the volume, having subjoined to them the Latin "Meditationes Sacræ," and the fragment, "Of the Coulers [*sic*] of Good and Evil," afterwards embodied in the 'De Augmentis.' This is a useful kind of reprint, such as the great libraries would be glad to undertake themselves if they had ample means for the purpose.

The collaboration of two such Dante scholars as Dr. E. Moore and Dr. Paget Toynbee produced in 1894 that most convenient handy edition of Dante's complete works, 'Tutte le Opere di Dante Alighieri' (Oxford: Clarendon Press; New York: H. Frowde). Dr. Moore's special charge was the text, his colleague's the index (of names and topics) filling 55 pages in double column; the whole brought within the compass of 500 duodecimo pages. We now receive from the publishers a third edition, extensively revised, the patient waiters for which will certainly be no losers. The revision, as we learn from the preface, has been chiefly in the prose works, and, above all, in the 'De Vulgari Eloquentia,' for which Dr. Paget Toynbee has availed himself of the Trivulzian and Grenoble manuscripts in facsimile, and of Prof. Pio Rajna's critical edition, but here not to the exclusion of independent judgment. Dr. Moore gives an idea of the corrupt state of the text before Rajna took it in hand, owing to Corbinelli (in 1577) having altered the Latin MS. to conform to the Italian version first published and become familiar. The rectification of the 'Convivio' has been Dr. Moore's undivided labor, through comparison of some 33 MSS., but much remains for a more complete critical apparatus. To the Canzoniere is added an exchange of verse in the Italian fashion between Dante and Forese Donati. Dr. Shadwell has looked after the 'Quæstio de Aqua et Terra.' So the new edition is an event.

Dr. Condé Benoist Pallen has reprinted in book form, under the title 'The Meaning of the Idylls of the King: An Essay in Interpretation' (American Book Co.), a series of short studies published in a magazine in 1895, which in turn grew out of a brief article in the *Catholic World* ten years before. The original article elicited from the poet a brief note of commendation, in which he said, "You see further into their meaning than most of my commentators have done." While this is not excessive praise, the line of explanation here taken may thus be said to bear the stamp of Tennyson's approval. Dr. Pallen expounds his theory concisely and adds some useful notes, chief among which is his comment on the time element. His explanation of the elaborate allegory shows how far Tennyson had got even by 1859 from the "faint Homeric echoes" of "The Epic" of 1842.

Among the latest issues of the "Belles-Lettres Series" (Heath) is a scholarly edition of Browning's 'Blot in the 'Scutcheon, Colombe's Birthday, A Soul's Tragedy, and In a Balcony,' by Prof. Arlo Bates. The two-page biography seems hardly necessary; but the introduction is perhaps the best statement of Browning's merits and defects as a dramatist that has yet appeared. Professor Bates is in thorough sympathy with Browning's spirit and aims, but gives us also the point of view of the playgoer, often perplexed by Browning's failure to work out the action after his characters have attained their inner, unseen development. The text is a careful reprint from the definitive edition of 1888-'94, with a full list of variants, chiefly from the first editions. Judicious and truly illuminating notes follow each play. The bibliography, which has been compiled with care, might have included some other well-known names (Fotheringham, H. A. Jones, Hapgood). As a whole, this edition is highly commendable.

The *International Studio* (John Lane) publishes a fully illustrated monograph devoted to a great artist and a clever draughtsman—Daumier and Gavarni. The lesser man gets the greater share of the text, for M. Octave Uzanne has devoted thirty-six pages to Gavarni against twenty which Henri Frantz has given to Daumier, but the plates are nearly equally distributed—about seventy for each artist. Daumier's savage energy and almost epic grandeur are well shown in many examples, which make one feel that the idealism of the ugly is not essentially different from that of the beautiful or the sublime. The kinship to Michelangelo and to Millet is not entirely imaginary, and in the elimination of the non-essential and the resuming of many observations in one statement there is a real analogy to the procedure of Watts. The mocking spirit of Gavarni, the Parisian dandy, is much slighter, and the bitterness of his later work is much more inhuman. There is always a strange sympathy underlying Daumier's ridicule. He hated the vices of his time and country, but one feels that he had a large heart, and that it was grief rather than rage that was expressed in his laughter, while one cannot find that Gavarni had a heart at all—only a clear brain and a light hand. Technically, Gavarni is supple and adroit; Daumier is extraordinarily forcible and veracious. And Daumier was a true painter as well as a caricaturist, and had a fine sense of tone and of the use of oil colors.

Brentano's publishes a little book on 'Modern French Masters,' by Marie Van Vorst, the masters dealt with being Puvis de Chavannes, Cazin, Rodin, Besnard and Steinlen. The essays, reprinted from the *Pall Mall Magazine*, are written in a rather odd dialect of the writer's own, and it cannot be said that they give as much insight into the nature and methods of the artists considered as Mr. Alexander Harrison has managed to pack into the latter part of his brief and rather dithyrambic preface. But then, Mr. Harrison is a painter. On the whole, the best of the book is the fifty illustrations reproduced from the artists' more important works.

'A Handbook of Plant Form' (London: B. T. Batsford; New York: John Lane) consists mainly of a hundred plates of outline drawings, by Ernest E. Clark, of various common plants, intended for the use of ornamental designers when their own studies may chance to fail them. In general plan it resembles W. G. Paulsen Townsend's 'Plant and Floral Studies,' published by John Lane in 1901. On the whole, Mr. Clark's drawings seem to us the better executed, while there is little to choose in the matter of descriptions. Mr. Clark's introductory chapter on design is too brief and general to have much value. The two books supplement each other, and those who may have found the earlier one of use to them are likely to welcome the later.

'The Japanese Floral Calendar,' by Ernest W. Clement (Chicago: Open Court Publishing Company), gives, in fifty-seven pages, many of them covered with good pictures, a vivid idea of the Japanese love of flowers and of nature in general. They are "worshippers of beauty rather than of the 'almighty dollar,'" and at the proper time the entire nation takes a day off to see the plum blossoms, or the maples, or the chrysanthemums, and other favorites. The author makes many apt quotations in prose and verse from the books of other writers on Japan to illustrate these floral picnics, thus producing a convenient and attractive summary of a fascinating subject to which others have devoted large and expensive volumes.

The Lincoln (Eng.) Public Library, at the end of nearly ten years of existence, has determined to lay open its special collection of works relating to the city and the county bearing the same name. The result is a small-quarto volume liberally spaced and printed, with classifications under seven heads, *e. g.*, General Works, Works relating to Particular Subjects, to Towns, Villages, etc.; Works on General Subjects by

Local Authors, Biographies of Lincolnshire Men and Women; Maps, Engravings, Prints, etc. Though this is mostly unified in an index, we suspect the American method would have been to bring all under one alphabet, with authors, subject and class entries. The greatest Lincolnshire light is Sir Isaac Newton; but Fox of the 'Martyrs,' Grosseteste, Henry More the Platonist, the Mozleys, the Wesleys, and Christopher Wordsworth, illuminate the theological body. Tennyson is the poet by way of eminency, with Jean Ingelow for an humble fellow-craftsman. William Cecil, Lord Burleigh, was of Lincolnshire origin, and Sir John Franklin.

In the November number of the *Zentralblatt für Bibliothekswesen* Dr. Wilhelm Erman, university librarian in Breslau, outlines a plan for uniform cataloguing and classification of the eleven Prussian libraries (the Royal Library in Berlin and ten university libraries) now engaged in the preparation of a union catalogue of their books. It is pointed out that the great expense of the undertaking cannot be very well justified as long as the catalogue exists only in the one manuscript copy in the Central Cataloguing Bureau in Berlin; that it would enhance the value of the work most decidedly if the titles were to be printed on cards of uniform size and distributed among the coöperating libraries, so that each library in course of time would possess a complete catalogue of all of them. Dr. Erman suggests also that the classification of the Royal Library be thoroughly revised and expanded, and the class-numbers printed on the cards, to serve as a basis for a reclassification of the other libraries; this would be of advantage, not only to the librarians, who are often transferred or promoted from one library to another, but also to scholars using the libraries in several cities. The importance, from a bibliographical point of view, of a printed catalogue of all the books in these libraries, especially as a basis for a complete bibliography of German literature, is also kept in view, although the writer emphasizes the fact that such a bibliography cannot be prepared in the Prussian libraries alone; the final coöperation of all the large libraries in German-speaking countries is aimed at.

Prof. Henrik Schück of Upsala, best known for his book on Shakspere and his 'History of Swedish Literature' (still, unfortunately, a torso), has published from time to time volumes of "chips from his workshop" under the common title "From Old Papers." The latest (sixth) volume contains, among other sketches, an interpretation of the Book of Jonah, the literary form of which is shown to connect it with the fantastic fishermen's and travellers' tales collected by Lucian, while its spiritual significance is found in its being evidently directed, from a liberal and cosmopolitan point of view, against the conservative chauvinism of a Joel. Another study is entitled "Gallimatthias," and seeks to justify the old derivation for the word *galimatias*, "galli Matthias" (*pro* "gallus Matthiæ"), which Littré repudiated in his dictionary. Still other topics are Hammurabi's Code, the recently discovered comedies of Menander, mediæval Paris (with notes on the life of François Villon), the "Gothic" school in Swedish literature, etc.

Doubleday, Page & Co. will found a new periodical, the *Garden Magazine*—"a 'gardener's reminder,' pointing out the things to be done during the month." It will be handsomely illustrated.

The chief interest of the *Harvard Graduates' Magazine* for December lies in the memorials of the dead. Following a portrait plate showing two generations of the Hoar family, Senator Lodge pays a personal tribute to his late colleague in a paper read before the Massachusetts Historical Society, with a noticeable want of particularity in characterizing Senator Hoar's public activity. His skill as a presiding officer in a turbulent party convention is alone remembered for mention. Mr. E. K. Rand conveys a distinct impression of the promise of the late Joseph Trumbull Stickney, whose untimely end was noticed in these columns. A Japanese alumnus of 1883, Mr. C. Kikkawa, writes of Charles Sumner Griffin, a professor in the Tokio Imperial University, "struck down before the prime of a vigorous manhood," in the words of the Harvard Club of Japan.

Prof. John J. Stevenson of New York University discusses vigorously, in the current *Popular Science Monthly*, the status of American college professors. The evolution of the college on its material side has left them with no substantial increase of pay, and the changes on the educational side have deprived them largely of that "literary leisure" which used to serve in some degree as a compensation for smallness of pay. They are no longer in touch with the trustees, as of old, and their relation to these officials tends to sink into that of the ordinary employee. On the whole, the incentives to young men of real ability to adopt college teaching as a profession are becoming constantly less. Again, the meagre salaries offered tend to promote the appointment of men who are not obliged to depend wholly upon their salaries, and the personnel of the profession inevitably suffers as a result. As a corrective, Prof. Stevenson suggests a renunciation of the attempt to make "universities" of colleges, a return toward the policy of prescribed courses, and a better adjustment of the relations between the corporate boards and the faculties. The first two of these steps would eliminate a large number of elective courses, taken by but few students, and thus make possible a reduction in the number of teachers employed, with more adequate pay for those retained and more leisure for study. Boards of trustees, he thinks, should be brought in some way to realize the financial sacrifice at which the teaching force does its work, and, when large donations are received, should feel the propriety of using them not merely to relieve themselves of a part of the contributions which they are ordinarily required to make, but to give relief to the teaching force as well.

The University of Göttingen has, with the current semester, introduced an insurance system for its students, male and female, in medicine, dentistry, natural science, pharmacy, and agriculture, against accidents in the University buildings or during the lectures, practical exercises, etc., in any of the institutes connected with the University. The scheme includes even the journeys to and from the University, and excursions under direction of a member of the teaching corps. In case of permanent injury, the amount of insurance is 20,000 marks; for temporary inability to work, after a certain number of days, 4 marks per day. The premium is 1 mark per semester for each of the insured. Göttingen is, we believe, the first university to adopt this innovation only recently initiated at several of the leading schools of technology. The University of Breslau has rapidly followed its example, and introduced compulsory insurance for all its students in the Natural Sciences, Medicine, and Dentistry, with a premium of 1.50 marks for each term.

—The first volume of William Dawson Johnston's 'History of the Library of Congress' has been published by that institution, and makes an interesting contribution to the story of library development in the United States. The beginnings of the collection were more adapted to the needs and wishes of Congress itself than to those of a national library, and to this day some of the restrictions imposed in the first years remain in force. Small appropriations, limited purchases, a narrow policy and imperfect agencies characterized the Library in the sixty years of its history told in this volume, and to these obstacles to growth were added three more or less destructive fires. Badly housed until 1853, managed more as a private than as a public library, and under supervision that remained indifferent to the necessities and the possibilities of the situation, the collections increased slowly and with little system. It is odd to read that Watterston, the librarian from 1815 to 1829, was regarded as the "only man of letters at the capital." In 1829 the Library fell into politics, and in the Jackson sweep Watterston was superseded by Meehan, of whom little good could be said at the time, and in whom little development occurred during his long service of more than thirty years. Of this abuse of the appointing power under Jackson Mr. Johnston records that it "did an incalculable injury" to the Library. Meehan was removed in 1861 for his supposed Southern sympathies.

—Opportunities to obtain good collections were permitted to pass with an indifference that now appears shocking. The Butarlin and Durazzo libraries were refused, as was the manuscript of Washington's Farewell Address. A selection only from the Priestley books was purchased, and the remains of Washington's library would have gone abroad but for the public spirit of certain citizens of Boston. Henry Stevens's Vermont collection was neglected. Even the purchase of Jefferson's library met with severe criticism, for contents as well as for price, although the few manuscript volumes of Virginia records obtained with it are now priceless. The idea of a national library answering to the British Museum was of slow growth, and did not prevail until long after the period covered by this volume; but it was early entertained and urged by men like Jewett, of the Smithsonian Institution, whose services, with those of Adams, Everett, and other members of the Library Committee, are worthy of remembrance. Jewett also foresaw the expediency of coöperative cataloguing, and planned a Bibliographia Americana, which failed of completion. Not until 1846 were copyright deposits made, and the practice under the law was very defective until 1867. The custom house long levied its barbarous duties upon books imported for the Library,

as it still does on photographs and music. This volume raises many points of interest in the early experiences of library economy in our country, and Mr. Johnston has performed his task with a fulness and orderly arrangement that leave little to be desired.

—The Massachusetts Historical Society issues a volume of letters selected from the papers of Major-General William Heath. The pompous style used in his memoirs is here laid aside, and, under the actual stress of routine in camp and campaign, "Our General" makes a very good impression. Entrusted with the command of the Highlands, he had great responsibilities, but those growing out of the reception and care of the convention troops at Boston were more delicate and exacting. It is quite certain that Congress took refuge in a quibble when seeking to repair the serious error committed by Gates, and broke faith, thus placing Heath in a position where all his abilities were called into action. The complaints of Burgoyne and the British officers were justifiable, and Heath sought to satisfy them, while, as the agent of the Congress, he was obliged to carry out its orders. The British would never admit that they were prisoners of war, and the terms of the convention bore out their contention. Much injustice and suffering was entailed by the measures taken by Congress to retain them as prisoners, and the correspondence in this volume, taken in connection with that printed by the late Charles Deane on the same subject, is very interesting matter. It is curious to read Heath's comment on Burgoyne's claim that coin or specie was worth three times the Continental bills of credit, which was indeed the fact. "But what an opinion must he have of the authority of these States to suppose that his money would be received at any higher rate than our own in publick payments. Such payment would at once be depreciating our currency with a witness. I have repeatedly informed them that it is trifling to mention what some sordid individuals would give in the exchange of money, since they do it with great secrecy at their peril, and if detected would be most severely punished." The letters relating to Sullivan's expedition to Rhode Island in conjunction with the fleet of D'Estaing, and those on the unfortunate Penobscot venture, should also be mentioned. Heath remained in command at Boston until superseded by Gates in 1779, when he returned to the Highlands. The editing of this volume is notable for its excellence.

—The statute dealing with compulsory Greek for admission to Oxford by exempting it from scientific and mathematical students was "promulgated," discussed, and thrown out on November 29 by 200 non-placets against 164 placets. Many absentees, probably about 40, were paired, so that the total number of voters concerned was upwards of 400, four-fifths of the 500-odd possible voters in "Congregation," which consists of all M.A.'s in residence at Oxford and on the college books. About a year ago the supporters of the statute just thrown out carried the appointment of a committee to frame the measure by a vote of 164 placets to 162 non-placets. A couple of years earlier still, a resolution looking towards the framing of a statute providing for a universal exemption from compulsory Greek was rejected in Congregation by 132 non-placets to 136 placets. Thus the "Greek question" has been before the University of Oxford and under more or less active discussion for four years or more, with the result of showing that there are ten members of Congregation who, being strongly opposed to making Greek optional for all, are inclined to favor exempting from it (to quote from the rejected statute) "candidates for the B.A. who offer themselves for the final Honor School of Mathematics or of Natural Science," while a majority of 36 are opposed to any sort of exemption from compulsory Greek for any candidate whatsoever.

—Supposing there had been a majority at Oxford in favor of the statute as "promulgated," especially if the majority had been small, the constitution of the University plainly called for an appeal to "Convocation," *i. e.*, M.A.'s resident and non-resident, who number close upon 6,000. The imminence of this appeal and of further discussion before "Convocation," in case the statute had passed Congregation, goes far to account for the brevity of the recent discussion; but the chief and sufficient reason was given by the President of Magdalen College (T. H. Warren), who, in moving the adoption of the rejected statute, urged that the matter, though of very deep significance, was not new either to the House or to the country. It had been in two different forms fully discussed in Congregation before, and the chief arguments had been clearly stated in the various leaflets that had been flying about in great numbers. The constitution of Cambridge University knows no intermediate body like the Oxford Congregation, and hence their discussion, carried on for three days just after the Oxford vote, has been very much longer. Furthermore, the proposal before them is of a very sweeping character, exempting every one who may desire such exemption from the requirement of Greek. The Cambridge deliberations have ended, and the vote, corresponding more or less to that of the Oxford Convocation, will be taken there next February. In the interim the whole discussion is likely to be printed and distributed for the information of their voters, who are also not unlikely to receive various other printed appeals and arguments. It is noteworthy that the proposals under discussion at Cambridge are more adverse to the privileged position of Greek than the regulations now in force for Scotland, which were framed by a Royal Commission. That Commission, although it did away with compulsory Greek, nevertheless penalized the resort to alternatives for Greek in the "Bursary competition," where Greek receives double the marks of French or German, the permitted alternatives.

—Few men have so remarkable a career as the Austrian lieutenant field-marshal, Gustav Ratzenhofer, who died, in the sixty-second year of his age, on board the steamer Kaiser Wilhelm II. as he was returning from the United States, where he had been engaged in sociological researches. He was of humble birth, and began life as apprentice to a watchmaker, but on entering the army as a recruit he took a lively interest in military affairs, and passed rapidly through the lower grades of the service to the high rank of lieutenant field-marshal. In 1871, while yet a young officer, he attracted attention by a prize essay on the "Technik der deutschen Armee," which was followed by other treatises on kindred subjects. Meanwhile he devoted himself with ardor to political, ethical, philosophical and sociological studies. As the result of ten years' researches, appeared in 1893 his 'Wesen und Zweck der Politik,' in three volumes (Leipzig: Brockhaus), in which he treats politics from a strictly scientific point of view as essentially a continuation of the struggle for existence in advanced stages of human culture, having for its end and aim the development of a higher civilization and the promotion of the general welfare of mankind. The same publishing house then issued in rapid succession 'Die soziologische Erkenntnis,' a solution of the problems of social life in accordance with the principles of positive philosophy, 'Der Positive Monismus,' 'Positive Ethik,' and 'Die Kritik der Intellekts.' At the time of his decease he was preparing a work on 'Positive Soziologie,' which, although left unfinished, can be in a measure completed from the author's notes. Of the above-mentioned volumes, that on 'Positive Ethics' is one of the most attractive and suggestive; especially interesting is the chapter on the workings of conscience in the several relations of life, its influence on the individual, the relation of the sexes, the family, the school, the laboring classes, as well as in economics, politics, science and art. Ratzenhofer is known as "the Herbert Spencer of Austria."

—On the 10th of November trains ran over the whole railway from Fusan to Seul —that is, on the Japanese line traversing the whole breadth and the richest part of Korea. The road is expected to be in full working order in January, 1905. Meanwhile, what of "Northeast Korea and the War"? Under this heading, in the *Korea Review* for September, we have an illuminating article from the pen of Robert Grierson, M.D., who has lived some years in this region, now overrun by the Cossacks. Contrary to the general view, Dr. Grierson finds, instead of a bleak climate, sparse population, dense forests, and an uncultivated wilderness, with rude and primitive manners, a situation closely resembling that in other parts of the Korean peninsula. The coast rice plains and abundant sea food, hillside farming, and farmhouses of individual owners apart from villages, lend, besides the usual Korean, an American suggestion to the landscape. The roads are constantly alive with traffic from mine, coast, field, and town. The people, who have many relatives who are naturalized Russians, are pronouncedly pro-Russian. Their distance from the capital affords them security from grasping officials, while the Chino-Japanese war of 1894-'95 furnished many refugees from war-devastated areas. Tigers, numerous thirty years ago, are now scarce, "frightened away," the people say, "by the whistle of the coasting steamers." Habitations and food, largely oats, are the only things noticeably plain in contrast to better diet and lodging elsewhere. The Russian headquarters are at Sung-jin, and their forces are all cavalry, so as not to be cut off by Japanese landing in their rear. They have made good military roads all the way from Vladivostok, blasting out the worst places, and are in

telegraphic communication with their great seaport beyond the Tumen River. The bearing of these "nine points of the law," when peace is declared, is manifest. Nevertheless, the Japanese have already begun a railway to Wonsan. As simple fact, the permanent coast people from Saghalien to Fusan are Koreans.

ANOTHER VOLUME OF THE CAMBRIDGE MODERN HISTORY.

The French Revolution. Cambridge (Eng.): University Press; New York: Macmillan. 1904.

This eighth volume of the great Modern History planned by Lord Acton comes out of its chronological order, following next upon the second volume, which dealt with the period of the Reformation. Its narrative covers about a quarter of a century, from the First Partition of Poland and the beginning of the embarrassments of the Crown in France (1775, 1776) to the establishment of Bonaparte as First Consul and the capture of Malta by the English fleet (1799, 1800). This is a short period compared with those which were included in the volumes that treated of the Renaissance and the Reformation. Yet no one will deem the 875 pages of the present volume too much for the matter they have to deal with. The French Revolution was a gigantic event; and both the causes that led to it and the phases through which it passed deserve the closest study. It gave rise to a series of wars by land and sea which taxed the energies of the great European States for more than twenty years. It produced enormous changes in Central and Southern Europe as well as in France itself. Here we have only the first half of the Revolutionary period, but that half, so far as France herself is concerned, demands a more minute treatment than almost any other part of modern history, so much controversy has raged round it, and so full of instruction is it to the philosophic student of politics. Ten chapters are given to the narrative of the Revolution, prefaced by four which describe the conditions antecedent and causative, out of which it arose; four chapters deal with the international politics of the time in Europe, five are chiefly devoted to the great war on land and at sea. The number of writers is slightly less than in the first and second volumes: here thirteen writers are found with twenty-five chapters—one, Mr. F. C. Montague, taking five chapters; another, Mr. Moreton MacDonald, four chapters. There are advantages in this, because it is less likely that any event of importance will drop out between two writers. This sometimes does happen, however, and must, upon the scheme of a work composed by many hands; or, conversely, it happens that the same event is described more than once, and perhaps in not quite the same way. An instance occurs in the account of Nelson's conduct at Naples in the summer of 1799, perhaps the least creditable part of his career. This episode appears in a chapter written by Mr. H. W. Wilson (chap. xx., p. 631) and also in a chapter by Mr. J. H. Rose (chap. xxi., p. 658).

Multiple authorship involves some loss of unity and comprehensiveness of view. The Revolution needs to be regarded as a whole, and so also does the general movement of the monarchs of continental Europe to resist it. But as different parts of both stories belong to different contributors, the duty of presenting a comprehensive view does not devolve specially upon any single writer. We feel, accordingly, a certain want of the breadth of treatment needed. The details are carefully worked out, and many just observations on particular parts of the story, or on particular actors in it, may be found. But no presiding mind gives the reader a *coup d'œil* of the whole French position or of the whole European position.

When we come to consider the performances of the several writers, the usual difficulty of passing any general judgment on the work of so many pens recurs. On the whole, the volume strikes us as scarcely up to the level of volume i. or volume ii. All the chapters are workmanlike, and most of them well written, though sometimes in a rather loose style approaching that of the newspapers. One does not expect to find the vulgarism "curio" (for curiosity) in a book of this type. The best are, in our opinion, chapter i., by Mr. Willert, containing a review of the intellectual conditions and influences which led up to the Revolution, and the last chapter (chapter xxv.), by Mr. Gooch, summarizing the results of the Revolution upon European opinion, together with M. Paul Viollet's chapter (xxiv.) entitled "French Law in the Age of the Revolution," and Mr. H. A. L. Fisher's account of Bonaparte's *coup d'état* (chapter xxii., Brumaire). Mr. J. H. Rose is generally clear and good in his account of military operations, though he sometimes disappoints us by passing too lightly over important points. For instance, he does much less than justice to Suvaroff's amazing Alpine campaign of 1799, perhaps the most instructive piece of mountain warfare on record. He is interesting on Bonaparte's expedition to Egypt and invasion of Syria, and seems to doubt, though his language wavers a little, whether the ambitious general really had any designs on India or on Constantinople, and whether the expedition was anything more than an effort to win fame for himself at a moment when he was not yet prepared to strike boldly for power in France.

M. Paul Viollet's chapter, already cited (which has been very well translated), is a model of what the concise treatment of a large and important subject should be. It is wonderfully lucid and exact, it selects the main branches of the subject for treatment; it is instructive in every line. One cannot summarize that which is already a condensed summary, but one may note a few of the most conspicuous points. It is shown how ripe France was for an amendment and for a codification of the law, so that the Revolutionary assemblies found a mass of suggestions and discussions awaiting them, with the opinion of thinkers as well as the sense of actual discontent prompting them to change. Every one desired reforms, every one hoped for a new and better world.

"The current opinion was that everything might be remodelled, public law, private law, constitution, and customs. Turgot forcibly summed up the revolutionary idea. 'There is no reason,' said he, 'for maintaining institutions founded without reason.' . . . For centuries the nation had been waiting for reforms; those long-standing grievances and sufferings which keep alive a people's need and desire for social regeneration had been handed down from age to age. The philosophy and literature of the eighteenth century reflect this condition of men's minds and sum up these aspirations, which they at the same time developed and strengthened. At length, under their powerful influence, fermentation began, heads were turned, imaginations inflamed. The ideal philosophy, imagined by philosophers and men of letters, was to be realized here on earth; hatred and injustice, war and suffering, were to be banished from the world; justice, virtue, and peace were to reign among men, who thenceforth were to enjoy equal rights and less unequal fortunes, and live free beneath the ægis of the law. As to the means which were to regenerate society, a constitution, decrees, a declaration would suffice, since ignorance, forgetfulness, or contempt of the rights of man are the sole causes of the national ills" (*Preamble to the Declaration of Rights.*)

A whole generation trusted in this scheme and drank of this intoxicating draught, and there was joy, enthusiasm, and faith such as had never been known—an enthusiasm and a faith that spread throughout Europe. Only a few of the higher natures retained enough freedom of mind, enough self-control, to be able to judge this great effort of humanity. The famous Wilhelm von Humboldt, when yet a young man, had already said: "Constitutions cannot be grafted on mankind like buds on trees. Where time and nature do not come to his assistance, man can make no more lasting work than bind together a few flowers that the first sunbeams will wither. Let the legislator therefore," Humboldt continued, "avoid attaching himself to an ideal, to purely rational conceptions; let him be satisfied to steer the present toward the distant vision of perfection." This was a remarkable dictum to be delivered at that time by a German thinker. One wonders if William von Humboldt had read Edmund Burke. But, as M. Viollet observes, Humboldt underrated the power of the Revolution to produce lasting work, because he did not quite know how much of the work it was doing was prescribed by historical conditions—was, in fact, the outcome of a past which had made certain reforms inevitable. The Revolution merely accelerated those reforms, and that part of its work lasted, while the part which emanated from mere abstract theories and fancies withered quickly away.

This view is well illustrated by showing that already there was a strong desire all over France for unity in law, a desire to simplify the law of land and get rid of its vexatious incidents, a desire to establish religious liberty, a desire to make penal law more humane. The men of the Revolution carried through these changes more hastily and passionately than a regular government would have done, and they made some strange blunders, especially in dealing with the laws of land. But the time had come when the changes had to be effected, by whatsoever government. The chapter is full of curious facts regarding the way in which the legislators tried to get rid of what they called "feudalism," and of their experiments in the field of criminal law and procedure. They (unwisely) abolished, against the advice of Robespierre, the old rules which required certain kinds of evidence for the conviction of an accused person, leaving the jury to follow their impressions or conjectures. Following the precedent set by Joseph II. in Austria and by the Grand Duke Leopold of Tuscany, the Convention passed, in 1795, a resolution declaring that "the penalty of death will be

abolished throughout the French Republic from the day of the proclamation of peace." In this instance the Convention took the advice given to it by Robespierre (whom it had lately executed). He had proposed the abolition of capital punishment. "Listen to the voice of justice and reason," said this humanitarian, too little known in such a character; "it proclaims that human judgments are never certain enough to justify society in taking the life of a man condemned by other men subject to error." This great philanthropist was deprived of the consolation of taking part in the voting of the Convention on October 26, 1795. Not content with trying to abolish what they called "feudalism" and the death penalty, the Convention did very nearly abolish marriage, for it put illegitimate children, recognized by their father, upon the same footing as legitimate, and did actually abolish attorneys, suppress notaries, extinguish all schools of law! This excellent chapter ought to be read in connection with the useful summary of the contents of the *cahiers* of grievances brought up by the members of the States-General in 1789, which Mr. Montague gives in chapter v.

Chapter xxv. (by Mr. Gooch) presents a very careful and interesting account of the way in which the Revolution and its ideas were received in different countries of Europe, and the influence it exerted upon opinion in each of them. The subject is so large that we must not complain of the rather tantalizing brevity with which some of its aspects are treated; but Mr. Gooch may perhaps appear slightly to overrate the novelty of the revolutionary circle of ideas, and slightly to underrate the extent to which parts of Europe—not England only, but Germany, for instance, also—had been prepared for them. One may really say that revolutionary France did not invent anything; she merely tried to put in practice ideas and conceptions already in the air, to translate belief into fact. No doubt this was a momentous thing to do, and a new thing for the European Continent, though it had been already done in the United States and to a great extent in England. The remarkable feature of the movement is that no mind really original or creative in the sphere of ideas bore a part in the actual work of the Revolution from 1789 till 1799. The men who led in action were not thinkers; and there were no men living at the time who could be compared as thinkers to the writers (including men like Turgot) of the period from 1720 to 1780, whose thoughts had done so much to make the Revolution possible.

So far as vigor of presentation and power of style go, nothing in this volume is better than, perhaps nothing quite so good as, Mr. Fisher's chapter on the *coup d'état* of 18th Brumaire. The circumstances which Bonaparte found on his return from Egypt, the weakness of the Directory, the general discontent with the existing system, the desire for some drastic change, are clearly and concisely set forth, while the narrative of events is told with great spirit. That day marked the end of the Revolution so far as France herself was concerned, though it was less than half way through the career of the Revolution in Europe. Little more than ten years had passed since the fall of the Bastile on July 14, 1789, and already the country was thoroughly tired of the attempt she had made to carry out the principles which were to diffuse universal happiness. "Men of every type," says Mr. Fisher, "concurred in Bonaparte's enterprise, aiding it either with secret prayers or overt act; soldiers from the army of the Rhine, soldiers from the Army of Italy, doctrinaires of the Institute who denied God, doctrinaires of royalism who affirmed the Tridentine decrees, peasants whose sole passion was for their plot of land, burgesses who cared for little but a quiet life, bankers who craved for enlarged credit, diplomatists who wished to see amenity restored to public life, all who cared for peace, all who cared for social stability, all who cared for the glory of France. . . . In the Government of the Directors France had discovered neither virtue, intellect, nor wisdom." The young general had his opportunity. The next volume will tell how he used it.

THE SOUTH IN RETROSPECT.

Bits of Gossip. By Rebecca Harding Davis. Boston: Houghton, Mifflin & Co. 1904.

Bethany: A Story of the Old South. By Thomas E. Watson. D. Appleton & Co. 1904.

The South is decidedly to the fore in the literary output of the present season. The 'Recollections and Letters of Gen. Robert E. Lee,' the 'Lee and Longstreet,' Mrs. Pryor's 'Reminiscences of Peace and War,' 'A Belle of the Fifties,' Mr. M. D. Conway's Autobiography, and Buell's Life of Andrew Jackson, are now succeeded by the two minor biographical-historical works named above. Mrs. Davis's 'Gossip' is rightly designated. Its eight chapters are loosely run together, without strict chronological sequence and with few dates; and in what pertains to the North (where Mrs. Davis was educated and came to live during the civil war) there is much untrustworthy report. She puts witless words of profanation in the mouth of Sydney Howard Gay during the Frémont campaign, which no one who knew that fastidious gentleman, then managing editor of the *Tribune*, can credit, though Mrs. Davis says she heard them spoken (p. 175). She relates that John Brown, in the guise of a farmer, came into her West Virginia town (Wheeling or its vicinity) "in the spring [April] of 1859"; but if she had consulted Sanborn's Life she would have seen that Brown was at that season, on his return from his Missouri raid, in Michigan and Canada with his human booty, next in Western New York, Concord, and Boston. "But five months later," she continues, "when the old farmer died at Harper's Ferry, on that bright October day," etc.; thus confounding the date of his attack with that of his execution (in December). She would have us believe that in the spring Brown deposited with "our new neighbors" "a quantity of huge pikes and axes" "with which the slaves in town were to kill their masters whenever there should be an uprising."

"I remember," she goes on, "how we all laughed at the story. The children used to tease the old black aunties and uncles to show them how they meant to stab them with pikes or behead them with axes when the day came. We thought it a very good joke" (p. 184).

It is charitable to suppose that Mrs. Davis is the victim of her memory, and that if there was any joking on the subject (apt to be of a grim sort in any slave-holding community) it postdated the first revelation of John Brown's pikes at Harper's Ferry. The whole story is rubbish, yet you are led to think the narrator actually saw the pikes and axes—the axes, by the way, a pure invention for Southern consumption.

There are some wholesome pictures of war as witnessed in a border State situated between the contending parties, but here, too, one encounters the imagination of the fiction writer. "There were," we are assured on page 123, "regiments on both sides which had been wholly recruited from the jails and penitentiaries." So far as this affects Confederate practice, Mrs. Davis may make her peace with her section; we will only remark that Mr. Watson, in his 'Bethany,' repudiates such a charge by implication, for he reproaches the "good Puritans who had said so much about the barbarity of Southern slave-drivers," with having released their felons "upon condition that they would join the army," as was proved by the capture of a bluecoat "wearing the ornament of a brand on the temple"—and this in the first months of the war! Did not Col. Claiborne Snead see the brand and hear the prisoner's explanation, and stuff Mr. Watson with the romance? Mr. Watson is a professional historian, but Mrs. Davis must envy him that touch about branding.

At page 171, this lady quotes, as if verbatim, a letter she received "one July morning in 1862" from "an abolition leader in Boston," not named and we venture to assert unnamable, asking her to help through the Confederate lines an eminent French man of science who "has come to this country to aid the slave in gaining his freedom." The letter may be read ironically, but no one not a lunatic could have written it seriously. That the abolitionists were little better than lunatics is clearly Mrs. Davis's opinion. She gives them a general character for eccentricity—all vegetarians, all users of quack medicines, all dispensing with cotton and sugar as slave-grown products, the men all bearded, etc.; "some of them gave up God himself because he had tolerated slavery." Some, who were tabooed in her town as suspected "emissaries of Garrison"—whatever that means—actually believed in "spiritualism, in divorce [shade of Milton!], and in woman's rights" (p. 184).

There is just one abolitionist, nominated for Vice-President on the first Liberty Party ticket, Francis J. Le Moyne, a truly remarkable man, of whom Mrs. Davis has something worth while to tell us at first hand (pp. 166-169). The Blaines she also saw in their Pennsylvania home. Frémont she makes a hero of, not very intelligently. Among the Concord circle she speaks most warmly of Hawthorne. The most valuable portion of her 'Gossip' is her reminiscences of life in a Gulf State in her earliest childhood, and we shall not challenge her illustrations of the prevailing code of "honor" and vendetta. Major Delasco's wife had given a small supper, followed by a "carpet dance," and was denied the communion the next Sunday.

"Early on Monday morning the major sent a challenge to each of the elders and members of the session, eighteen in all. Most of the men whom he had challenged were his cronies, with whom he supped daily and

exchanged gossip, receipts for drinks, or the eggs of fancy poultry.

"'I may die on the field,' he said, 'but I shall have vindicated Maria's honor, thank God!'

"This washing of reputations clean by blood was going on perpetually."

Mrs. Davis's literary art is apparent in some of her episodes, but it falls short of Mr. Watson's, which is far less conscious and more racy. His 'Bethany' may be curtly defined as *Dichtung und Wahrheit*, and the latter half is purposely given a romantic form, though it is as strictly historical as the first. The entire narrative is as absorbing as a novel, and has an irresistible movement and no little charm. It proceeds from a mind which sees vividly, describes freshly and powerfully and candidly, often humorously, often poetically, especially in the depiction of nature, and has a better title to literary fame than any of Mr. Watson's rival candidates for the Presidency at the late election. Its scene is Georgia till its hero passes to the seat of war in Virginia, and it embodies the author's recollections of his boyhood just before and during the civil war. It is not a stenographic report; it is not regardful of the unity of time at least—it projects Populist notions, for example, backwards into the ante-bellum period; it is just a broad, dramatic expression of Southern sentiment on the brink of war and in the midst of hostilities, and in this aspect is absolutely veracious. "Just as the facts were, I will relate them to you," our author says in a Whitmanesque strain at the opening; "just as conditions were in the South, before the war, I will describe them to you; just how we felt and acted during the cruel conflict between the States, I will try to make plain." "If there is any human creature that I do understand it is the Southern negro" (nigger is his preferred orthography); but give us rather Mr. Watson's portrayal of his own color. It is not new—there is not a lineament of the slaveholding and fire-eating class that is not familiar to any student of the anti-slavery conflict; but it is from a Southern hand, and let no one call it the hand of calumny.

For example, Mr. Watson is describing his grandfather's plantation (p. 17):

"By the way, I now recall that there was a bright mulatto boy on the place, named Sam, whose mother's color was a smooth, universal black, and whose son Sam bore a distinct likeness to my Uncle Ralph. I mention this as a singular coincidence, just as I might tell you of the two mulatto fiddlers at Charlottesville, Va., who bore such an impertinent and irrelevant resemblance to the Sage of Monticello."

Mr. Watson has written a striking biography of Jefferson, and thinks it no discredit to the father of American democracy to report his amours with the despised and servile race. Not so Lowell, when writing for the *National Anti-Slavery Standard* in the late forties: "He [Jefferson] was neither so thriftless nor so inhumane as to turn the Ishmaels he had begotten into the desert. . . . He . . . enriched his pocket . . . by his philoprogenitiveness." Uncle Ralph was equally removed with Jefferson from Mr. Watson's censure. He is the hero of the love story referred to above, and apparently it should and would not have shocked the lovely girl whom he sought to marry to meet the aforesaid Sam and recognize his paternity. But this is not all of the revelation of the Southern mind. Mr. Watson treats us to a great blast against the iniquity of "miscegenation" and the tolerance by Northern abolitionists of a spontaneous, affectionate, legal union between whites and blacks according to natural affinity. Mr. Watson, we repeat, has some humor, but it breaks down here.

It breaks down again in the matter of our author's colored nurse (p. 15):

"Mandy, indeed, might be considered something of a curiosity, for the reason that she was virtuous. It was said among white men, as well as black, that no temptation could reach her. Whether she was constitutionally cold, or whether she acted from principle, I do not know: I simply record the fact that she was regarded and respected on the plantation as a strictly virtuous girl."

The testimony of white men is important, because, as we are told on page 238, "to throw around their women every possible protection, to guard the home against the slightest impurity, are purposes common to all Southern [white] men."

The nonchalance with which Mr. Watson penned the above extract is visible in his account of other Southern habits not yet extinct. In happy Bethany:

"In the grocery which stood on the flat called 'the slashes,' they could show you the spot where Dick Hattaway had cut the life out of Abe McDonald with a bowie-knife. There were places, also, where respectable citizens had shot at others equally respectable; but as there were several of these places and they were lacking in individuality, nobody cared particularly to see them."

In a fight at a political barbecue, with Toombs and Stephens for the chief orators, in which the lie is passed at the feast and a lay preacher engages the challenger of his veracity, one Thomson, the latter is tripped and thrown by an interloping third party, one Hood, who "immediately inserted his thumbs under Thomson's eyes, to gouge them out," and actually destroyed one. This is recalled and related by Mr. Watson as impassively as if he were snapping a kodak, along with a subsequent fight between three friends, all drunk, when "I saw Carter lay the blade to Bean's cheek, to his chin, to both sides of the neck," and the blood gush from the four wounds. He describes on page 80 a "gander-pulling" on his grandfather's grounds—the bird with greased neck and head hung to a high limb by its feet, while its tormentors rode circling about the tree at top speed, "each horseman taking a pull at the gander's head as he galloped past. The hero of the game," Mr. Watson adds coolly, "the winner of the stakes, was the fellow who finally pulled the gander's head off." The Quaker blood in his mother made her explain the performance to the boy "in a tone of disgust" as "just a gander-pulling." His beloved Uncle Ralph was an adept in it, as he was foremost in hard drinking, horse-racing, and cock-fighting.

Space warns us to forbear. Mr. Watson's illuminating book is dedicated "to the magnanimous men of the North who are willing to learn the truth about the South." It marks the hereditary isolation of that section that he should be ignorant that he is carrying coals to Newcastle. Long before he was born, the South insisted on coming North with its oratory, its newspaper advertisements of runaway slaves, the backs of the slaves themselves, its revolvers and bowie-knives, its menace of death to abolitionists, its rewards for their heads; nobody had to go South to learn all about the "peculiar institution." Mr. Watson gives unconscious confirmation of the very primer of abolition knowledge of the disposition, habits, standards, and tender mercies of the slaveholding section. It is valuable, but absolutely unnecessary. We have heard, too, all the arguments advanced by Mr. Watson himself or by his idol Toombs and his associates, in or out of liquor (as he shows them), on the subject of Northern aggression and the Southern right of secession. Still, we advise any one to read his 'Bethany' carefully from beginning to end.

RECENT FICTION.

The Custodian. By Archibald Eyre. Henry Holt & Co.

Off the Highway. By Alice Prescott Smith. Boston: Houghton, Mifflin & Co.

The Sea Wolf. By Jack London. Macmillon.

On Etna. By Norma Lorimer. Henry Holt & Co.

It is decidedly hard on Archibald Eyre and his illustrator, Penrhyn Stanlaws, that Anthony Hope and Charles Dana Gibson should have been before them in the field, so that the thought "as moonlight unto sunlight" inevitably occurs to us. But, even so, no one can deny that 'The Custodian' is a readable story, with several interesting characters. The improbability of the plot is forgotten in the excitement of the successive incidents, and it is only in the last few pages that a virtual impossibility shocks our common sense. Even though the reader is sharper-witted than the hero, and pierces the disguise of exchanged clothes by which the German brother and sister, runaways from the court of their royal father, deceive their young English custodian, yet we can enjoy the progress of events in spite of being in the secret. Two things only are left uncomfortably hazy—first, whether the villain's father is or is not abetting his son's attempts to marry this escaped princess; and, secondly, why the hero's mother should have barred his succession to a dukedom out of sentimental respect for his dead father's wishes. Otherwise the story is as clear as daylight, and would to a nicety while away a railway journey.

'Off the Highway' is a remarkable book. The title is well chosen for the descriptions of Californian mountain life have in them the true atmosphere of the country. The following picture of early dawn is a good instance: "A tinkle of bells swept down to him from the road above. A six-horse team, hauling wood, was using the first daylight to make its way down the mountain. The bells on the leaders swung rhythmically on the level stretches, and jarred into splendid crashing discord on the curves." Furthermore, the characters are sharply drawn and individual. The tired surgeon, forcing himself to a complete rest; the splendid clergyman, with mind as lofty as his stature; the heroine, with her ready laughter and somewhat absurdly ready tears; even the minor figures—stand out in strong relief. The narrative and dialogue are good, often epigrammatic, though unfortunately interspersed with such verbal

affectations as the following: "She gestured that side of it away," "She palpitated before him with the hard, definite sunlight of a California summer sifting over, but she flowered in its barbaric glare"; or this sentence of mixed metaphors: "They are wonderful translucent days, hushed spaces, gentle-toned and wooing, that cradle the nerves and tempers frayed by the long reach of the wind-harried hours." One serious defect is the sense of anti-climax in all the crucial moments. Three times at least are we roused to a pitch of expectation, and three times we receive a stone instead of bread, till we exclaim, as the hero did, after the last of these tame explanations: "I thought it was so different. And this really has a ludicrous side." Still, the book will find many readers and will deserve them.

Whenever a new volume by Jack London comes out, we anticipate vigorous writing, brilliant descriptions, and a surfeit of horrors. The fulfilment was seldom as complete as in this instance, but it is the third item that compels our chief attention. Never has sickening brutality been more gloatingly described than in this story of life on a sealing schooner, under a captain of whom the hero says: "This man is a monster. He is without conscience. Nothing is sacred to him, nothing is too terrible for him to do." Whether this is a probable or even possible evolution for a Norwegian sailor-boy, is, of course, an open question. To most readers the man who strikes and tortures and kills as his daily occupation, while for his pastime he reads Herbert Spencer and Browning, or talks philosophy, will seem no less grotesquely fictitious than the Caliban to whom he is compared. Yet the conception is at least novel and powerful, and the breath of the sea is almost painfully perceptible throughout. Indeed, the book might have compelled admiration, if not belief or liking, but for two grave faults—first, a strained exaggeration, which makes the scenes of horror nauseating rather than thrilling, and the love-passages distressingly mawkish; and, secondly, a longwindedness, perhaps to be explained by the original serial form. In a volume of 366 pages we have only the following main incidents: the rescue from the sea, *à la* Kipling, of a man-writer and a woman-writer successively (their meeting being brought about as violently as in a game of "Consequences"); their life on and escape from the sealing schooner, their life on and rescue from a desert island, and the death by paralysis of the Sea-Wolf himself. All the rest is padding of the most tedious kind, with exasperating tricks of speech, such as "what of" for "what with." We are left regretting that Mr. London should ever have abandoned the short stories that he told so well. But perhaps the whole book is to be regarded as a parody, in which case 'Captain Outrageous' would be a more fitting title.

Norma Lorimer's 'On Etna' is another instance of vivid, in this case almost lurid, local color, spoiled by unconvincing characterization. All who have been in Sicily, and many who have not, will find this book conjure up for them visions of that wonderful landscape dominated by the grand snow-topped volcano. As far as descriptions and mere writing go, the author deserves all praise. When we analyze the plot and the psychological subtleties, our admiration decreases. The chivalrous Adonis of a brigand might, perhaps, but for his lapses into metaphysics, pass muster as a barely possible personage; but the English girl whom he captures, defends from an unworthy lover, and finally worships with a passion that is returned, taxes our credulity beyond its limits. Not only is she impossibly beautiful and fascinating, but the scene in which she visits the bandit in prison in order to whisper her love into his dying ears, is, with her antecedents, simply inconceivable. The writer is more successful with the less ambitious characters, especially the unappreciated English lover and the woman brigand Marietta. Apart from the descriptions of scenery, the main interest of the book lies in its information about the Mafia. Our sympathies are divided between the corrupt rule *de jure* of the Government, and the violent rule *de facto* of these so-called *Amici*, and such a topic would in itself make the book worth reading.

Historic Dress in America, 1607-1800. By Elisabeth McClellan. Philadelphia: George W. Jacobs & Co. 1904.

The history of clothes in America can hardly be said to antedate those first years of the seventeenth century when the English began to settle in Virginia. The half-dozen pages of the present volume that deal with the still earlier Spanish settlements in Florida and California are rather a summary of the history and customs of the Spanish colonials than a contribution to the history of dress. But with the landing of the hundred colonists of the Virginia Company in 1607 our real record begins. We know from Capt. John Smith's book, published in 1624, just how many shirts and shoes and suits of clothes were thought by the London Company the necessary minimum for a Virginia emigrant; fifty-two gentlemen adventurers in that expedition naturally brought a more extravagant outfit, and with them the fashions of London were first introduced into America. Colonial dress among the richer colonists is, of course, merely English dress. Brocades and velvets were in those days a sort of investment, part of the family assets for decades, and it would have been poor economy to send to England for a coat of some cheaper fabric when a brocade would last twice as long and look twice as well. During the last half of the seventeenth century the General Court of Massachusetts passed countless orders restricting extravagances and dictating the length of sleeves or the height of boots, but one had only to prove that one was "passing rich" (two hundred pounds was counted a fortune that excused display) to disarm all criticism and even the law. The seventeenth-century Dutch settlers followed to some extent the fashions of their mother country. Miss McClellan devotes a short section to the dress of the Quakers, which has been handled once for all by Mrs. Gummere.

The eighteenth century is more interesting because our knowledge is more detailed. Moreover, the Colonies were now more prosperous; China and the Indies sent to American markets their rich and delicate silks and gauzes; and towards the end of the century, when intercourse with London was no longer easy or desirable, the fashions of France partly superseded those of England. The colonists were of course at the mercy of the European shopkeepers who filled their orders. When Washington ordered clothes, his wife desired "One fashionable hat or bonnet," and so the order went. No wonder that, in 1760, he writes indignantly to his London agent that "I never had such a pennyworth before. . . . Instead of getting things good and fashionable in their several kinds, we often have articles sent us that could only have been used by our forefathers in the days of yore." The advertisements of the newspapers of the period are useful for the details of dress. Often a runaway slave or servant had to be traced by his clothes, or he had stolen his master's, which were minutely described. When green was the fashionable wear, a man named Davis robbed the church at Wilmington of its hangings and had a green coat made of them, whereupon a reward of ten pounds was offered for his arrest and the recovery of the coat.

One of the most interesting sections of Miss McClellan's work is that on American uniforms. The quotations from the army orders of the day throw light on the pathetic condition of the Continental army, which in 1775 "has unfortunately no uniforms," so that the officers are directed to wear cockades of different colors according to their rank. In 1776 the General "feels an unwillingness to recommend, much more to order, any kind of uniform, but as it is absolutely necessary that the men should have clothes, he earnestly encourages the use of Hunting Shirts." In 1780 the General begins to feel nervous about the appearance of his men before "our Allies, composed of the first troops of Europe," and begs his field officers "if possible to get their old clothes altered to one regimental fashion." In 1783 "the Commander-in-Chief recommends that the business of turning and repairing the coats of last year should now be considered as a primary object." That was in February, when the scarlet cloth expected from Europe had unhappily failed to arrive. One is relieved to read that in April "the regiments which have not turned and repaired their coats are to draw lots for the scarlet cloth which arrived yesterday."

The names of materials in constant use in those centuries are in many cases completely obsolete. Broadcloth has held its own and serge was worn, but what about the chilloes, betelles, deribands, and tapsiels, which were as familiar to the shopper as are the chiffon and tweed and velveteen of to-day? The glossary at the end of the volume before us was a happy thought, but it must not be regarded as final authority. It may be that Piccadilly is so called from the "peccadilles," or bands trimmed with pointed lace, sold in a certain shop in that thoroughfare in the reign of Charles I. But that gauze harks back to Gaza, and dimity to Damietta, has not been proved.

In her long list of authorities consulted for this work the author does not mention Mrs. Alice Morse Earle's 'Two Centuries of Costume in America,' published and reviewed in our columns last year. Yet Mrs. Earle had ranged over the same field, and the same authorities are inevitably quoted in both books. It would not be fair to make a too close comparison of the two. Mrs. Earle has a gift for style and a fund of anecdote quite absent from the work of

Miss McClellan, and she seems to have had access to more Colonial relics, as one would expect from a writer who has devoted so much energy to the study of Colonial life. Miss McClellan's history is more in the nature of a reference book, a most useful collection of prints and evidence of all kinds. The colored plates and other drawings by Miss Steel are numerous and very attractive, and illustrate all possible phases of the fashions of the two centuries of Colonial life. There are many photographs of Colonial garments and household goods, and the volume, a small quarto, is admirably suited for a gift-book.

My Literary Life. By Mme. Edmond Adam (Juliette Lamber). D. Appleton & Co. 1904.

The first volume of Mme. Adam's autobiography, which appeared two years ago, closed with her marriage to M. Lamessine and her awakening to the fact that, by that marriage, she had made a mistake which seemed irreparable. The second volume takes the reader from the provincial life of Soissons and Chauny to Paris, where the Lamessines settled in an apartment in the Rue de Rivoli. It was in the Paris of the fifties, of the Second Empire, that Juliette Lamber (as she preferred to call herself), now became a person of some importance. Her literary career began with the publication of her defence of George Sand and Daniel Stern in her 'Idées Anti-Proudhoniennes.' Proudhon had showered insults on both these writers in his 'La Justice dans la Révolution,' and he was reckoned so terrible an adversary that no publisher would look at a manuscript in which he was attacked. Finally, it was published at the expense of its author, and her defence of their character won her the friendship of both George Sand and the Comtesse Agoult (Daniel Stern, the mistress of Liszt). But unfortunately these two distinguished women, after a devoted friendship, were themselves at daggers drawn. Juliette Lamber received an ambassador from George Sand to inform her that they could not meet until she had quarrelled with Daniel Stern. About ten years later, through some disagreement over a rival salon, Daniel Stern became estranged from Juliette Lamber, who was at once admitted to the intimate circle of George Sand.

Mme. Adam saw the début of Patti and of Bernhardt, and records the publication of the first number of the *Petit Journal*. She was a conspicuous figure in more than one political salon before she founded her own with the twenty men friends and five women prescribed by Daniel Stern as the correct proportion. The set of instructions that the latter gave to Juliette on how to make and keep up a salon are interesting, because they sum up the experience of a clever Frenchwoman whose salon was frequented by all the distinguished Republicans of the day. There Mme. Adam met Grévy, Carnot, Vacherot, Renan, Littré, Girardin, Scherer, and many other politicians and writers. She must have kept a voluminous diary; at any rate, she reproduces in the liveliest manner the conversations, personal peculiarities, jealousies, and weaknesses of the men and women who then led the opposition to the Empire. In the same salon were to be met not only the inveterate Republicans who would make no compromise with the Empire, and admired Orsini, the would-be tyrannicide, and also the "oath-takers" as they were called, who split the Republican party, and revolted the men of 1848 by taking as their motto "The Empire with Liberty."

M. Lamessine drops so completely out of the life of Juliette Lamber that the readers of her autobiography hardly remember the fact that she still bore his name. When she asked for a separation on the ground of his neglect and infidelity, M. Lamessine replied: "I will never consent. You are the handsomest ornament of my house, and, if I should be in financial trouble, your people would help me, I am sure." When her first book proved a success, he informed her that he should take pleasure in signing his own name to the future editions: "The law authorizes me to appropriate to my own use all that is joint property. A wife's work belongs to her husband." Accordingly, he signed with his name the second edition. Mme. Adam remarks that there is even today no clause in French law that would prevent a French husband from doing likewise. M. Edmond Adam was one of Daniel Stern's friends. When the present volume closes, he was still no more than a friendly adviser—one of a small circle who made it their business to protect Juliette Lamber from her husband.

Mme. Adam's second book was 'Mon Village,' followed by 'Mon Voyage autour du Grand Pin,' written when a serious lung trouble exiled her from her beloved Paris to the Golfe Juan, where she made friends with Mérimée and Cousin the philosopher. There we leave her making a garden about the little house that she built near the sea. By this time M. Lamessine has somehow been disposed of, for her apartment in Paris, like her winter retreat in the south, is now shared by her father and mother, of whom every reader of the first volume must retain a lively recollection.

The translation of the second volume is no improvement on that of the first. It is slipshod and incoherent, with numerous mistakes in spelling. But Mme. Adam's narrative is so vivid, so spontaneous and amusing, that the treachery of her translator has done little to lessen its charm.

The Appreciation of Sculpture: A Handbook. By Russell Sturgis, A. M., Ph. D. New York: The Baker & Taylor Company. 1904. Pp. 235.

An attempt has here been made to help the general reader to appreciate the merits of works in sculpture from those of Greek antiquity to the present time. The task is a difficult one, because, as the author repeatedly remarks, it is often impossible to find words to express plastic qualities. The appreciation of sculpture, as of any other branch of the fine arts, demands a culture that can be acquired only by a habit of observation and critical comparison of works of art themselves. Books can be of use only in so far as they may stimulate observation and critical judgment. Mr. Sturgis has written with the commendable purpose of finding such merit as may exist in works of widely different character. His book is appreciative in the sense of finding something to praise in nearly every class of works noticed; but while he has apparently endeavored to discriminate, and to make his appreciations just estimates, it appears to us that he errs somewhat on the side of too general praise. There is not only a wide difference, but in some cases a radically opposite character, manifested in the sculptures brought under consideration; and a catholicity which embraces things so opposed can hardly be entirely just.

The discussion of ancient Greek sculpture appears to us the most interesting part of the book, though it covers but forty pages, and in this narrow compass the question of the use of color in ancient sculpture is included. The superior character of the early mature art of Greece is recognized, but the period of finest production is said to extend from 470 to 350 B. C. It might be contracted, for before 350 Greek sculpture had lost its most excellent character, and had begun to manifest those qualities of over-elaboration and trivial naturalism which mark the decline of the art. Mr. Sturgis has recognized this change, and, in commenting on the realistic treatment of the drapery in the so-called Niobide of the Vatican Museum, he justly remarks that this gives the work no superiority. The more conventional rendering of drapery in the earlier works marks an appreciation of the proper limitations of sculpture which the later Greek workmen had lost sight of. We could wish that Mr. Sturgis had begun his consideration of Greek sculpture at an earlier stage of its evolution, following its development from the archaic conventions of immaturity, and observing how, through all the lack of knowledge and of technical skill, a strong sense of beautiful and effective composition is manifested, and pointing out how the essential principles of design embodied in the early work still form the basis of the consummate art of the Phidian age; and how the primitive conventions give place to those which are inseparable from any work in which the nature of materials and the monumental purpose of the sculptor's art are respected.

The treatment of mediæval sculpture is inadequate, and we have no doubt the author will agree with us in this. The more architectural purpose of the Gothic carver is recognized, and this is fundamental to a right appreciation of Gothic sculpture. But the really classic qualities which underlie all the peculiar conventions of the finest mediæval art, as well as the remarkable fineness of execution which the best of it exhibits, ought to be brought to the reader's attention. Nor is the discussion of the sculpture of the Renaissance as complete or as discriminating as we should desire, though it includes much that may be helpful to the reader unacquainted with the art of this brilliant epoch of artistic retrospection.

A large part of the book is devoted to modern sculpture in its manifold varieties, but just appreciation of contemporaneous works of art is not easy to reach or to formulate. Modern artists work under difficulties not always fully realized. The lack of common aims, common traditions, and monumental purpose, together with the wealth of knowledge of past achievements of many epochs and of many peoples; and the unprecedented dominance of the idea of likeness to nature as a primary motive—make the attainment of the highest excellence in sculpture, and just estimates of

the merits of contemporaneous productions, equally difficult.

The book is illustrated with 64 half-tone plates. These are excellent of their kind; but a great objection to the half-tone process is the fact that good impressions cannot be got on good paper. This highly calendered paper, of wood-pulp and filling, is offensive to the eye and weak in substance.

The Awakening of Japan. By Okakura Kakuzo. The Century Co. 1904.

The mantle of Mabuchi and Hirata has fallen upon Okakura, who was born four years after Townsend Harris's diplomacy made the Japanese a trading nation and lifted up the native merchant from the social mire. Against the flood of Western influences which, if unregulated by the dykes and sluices of fixed taste, would sweep away Japan's civilization, or at least disintegrate her ideals, Mr. Okakura, this true son of the Everlasting Great Japan, is a Protestant of intensest spirit. Considering that even the new Japan, which surprises the world by her power of adaptation and of offence, is but the natural outcome of her own inherent forces in religion, art, and tradition, he would keep the Occident at bay, compelling its gifts to be tributary to Japan's richer life, while challenging with a flaming sword whatever will work harm to the empire's noblest life.

Mr. Okakura has already written a bold and illuminating book on 'The Ideals of the East.' In this, his latest work, applying his theories more especially to Japan in retrospect and interpretation, we have the very marrow of his thought. His ruling ideas are easily recognized. Asia is, or at least was, a unity. The Vedic and the Confucian ideals became one in the weaving of the web which Buddhist missionaries slowly consummated in the loom of time. In the thirteenth century the outburst of the Mongols broke the unity of Asia, leaving a long legacy of mutual hatred and disorganization which made India and China the prey of Europeans. Japan, within its sheltering island walls, is the residuary legatee of all Asia, and more nobly than any other Asian nation has she held to the lofty ethics, ideals, and art of that continent whence all great faiths have issued. Even against the modern religious invasions, lust of conquest, and aggressive economic systems built on machinery and a state of society that must constantly win new markets even at the cannon's mouth, she can, if she will, hold her own. It is Asia and not Europe that has been, and still is, the inspiration of the real Japan, that was, and is, and is to come. The author need not tell us in the publisher's preface that he has had "information better than printed material and common hearsay" through "special acquaintance with surviving actors in the Restoration," for on every page he glorifies the past and gives us a picture painted in the iridescent colors of a sunset glow. His is an idealized painting in words of life in the Island Empire, and one which is about as accurate in detail and about as closely related to fact as is Sir Walter Scott's picture of the Middle Ages. In a word, it is an artist's representation. Mr. Okakura works with the brethren of the palette and brush, or at least with vital interest in art, as well as with eloquent pen and the literary resources of the scholar. While the acknowledged champion of the conservative reaction in favor of old Japan, he is frank and generous in his recognition of the message which Christianity bears to woman.

In elaborating his thesis, which he does in a delightful little book, easily slipped in the pocket or held in one hand, he shows that "while Christendom struggled with mediævalism, the Buddha land was a garden of culture." He pictures the night of Asia, when Islamic and fanatical Mogulism shattered the unity of Asian thought and life. Japan, though never conquered, was "buried alive for nearly 270 years." Under the titles, "The Chrysalis," and "Buddhism and Confucianism," we are shown how the duarchy grew up. The Mikado was gradually dehumanized by a ring of politicians, and evaporated into a god. While elevated to that point at which he was most potent as a mysterious idol in a box, he was most impotent as a ruler. The "old badger," Iyeyasu, had his own way by disintegrating society, separating the different classes, each with its own world of experience, thought, and expression; and this Yedo dictator so determined the course of religion that, according to the proverb of the discerning, "Even a sardine's head became an object of worship."

Masterly is the author's interpretation of the Voice from Within, showing how three schools of thought, dominant from the seventeenth to the nineteenth century, united in causing the regeneration of Japan. The School of Classical Chinese Learning, or the Higher Criticism of the Confucian texts, was in deadly opposition to the official orthodoxy of Yedo, and in its manifestation, often with noble motive and pretext, was the cause of technical insurrection and bloodshed, but always in the interest of the common people. The Oyomei School, which taught that knowledge apart from action, and philosophy without application in life, were worse than vanity, was the nursery in which the great leaders of 1868 and also the men of light and action of to-day were trained. But it was the Historical School that first pointed the goal which, along a path made clear by light brought from the younger nations, Japan has reached. Yet the advent of the West was not an unmixed blessing. The Japanese, eager to accept the new civilization, were regarded as renegades by their Asian neighbors. The Russians were the first to threaten Japan, and the coming of the American ships was a mighty shock. This was the White Disaster.

In the transition between the assassination of the Regent Ii, who signed the Harris treaty on his own responsibility, and the Restoration of 1868, there were many rapid changes, with the formation and decay of samurai parties, Federalists, Imperialists, and Unionists; and following upon these we are shown the commoner transformed into a samurai by the system of military service. In the reincarnation of his country, our patriot sees Japan accepting the new without sacrificing the old. It is the heart of old, not new, Japan that beats strongly beneath the arm that pulls the trigger of the modern rifle or the lips that speak into the battle-field telephone. In art, Japan stands alone against all the world. As to the Yellow Peril, it is but the nightmare of a guilty conscience that fears unknown evil while its greedy hands still clutch. The very nature of Japanese civilization prohibits aggression and means peace. Mr. Okakura does not grapple with the problem of how the East and the West are to be made one in brotherhood and mutual respect. Perhaps he will essay this task in some future work.

A word of caution to the Japanophile and the man seeking the royal road to a knowledge of Japan. Here we have history written not as one knows, but as one feels it. It is impression and appreciation, rather than the work of the logical intellect. To not a few of the author's broad statements no scholar could give assent, while to talk of "the awakening of Japan" without ever mentioning the religious and non-religious forces of southern Europe, in the sixteenth and seventeenth centuries, or the Dutchmen of Deshima, who for nearly three centuries poured a constantly fertilizing stream of influences upon the Japanese intellect, or even referring to the five thousand or so *Yatoi* or salaried assistants beginning with Verbeck and Pumpelly and continuing with Hearn and hundreds still at work in the land, seems not only absurd, but positively misleading. "Making an idol does not give it a soul," says Japan's own proverb.

Wall Street and the Country: A Study of Recent Financial Tendencies. By Charles A. Conant. G. P. Putnam's Sons. 1904.

The essays contained in this volume have all appeared before as articles contributed to the periodical press, or in some other form, but have been rewritten for the purpose of the present publication. The result is an excellent handbook, dealing with "undigested securities," Trusts, the function of the exchanges, the economic progress of the nineteenth century, the standard of value in China, and the growth of trust companies. Mr. Conant is a member of the Commission appointed by the United States in 1903 to consider the question of securing stability of exchange between the currencies of gold-standard and silver-using countries. The first aim of our commission and that appointed by Mexico "has been to put China on the gold standard," and what Mr. Conant has to say on this difficult and important subject is well worth attention. To sum it up in a very few words: The problem is not to provide a gold *currency* for China (to do this would mean a draft on the world's resources of at least $1,200,000,000 of gold—one-quarter of the existing world's stock), nor is it to establish an artificial equalization of gold and silver by "any of the methods pursued under the name of bimetallism." What is wanted is simply a gold standard, such as has been introduced in India, and this, it is thought, can be accomplished by limitations of coinage, by acceptance of the existing currency at gold par for public dues, and the maintenance of a gold reserve.

Mr. Conant combats with great force the common idea that the keeping of trust-company reserves on deposit in national banks, instead of in actual currency in their own vaults, tends "to rear a structure of credit too lofty for the slender foundation of currency at its base." His argument is, in brief, that the structure is more solid than that which rests on the cash reserves in the Bank of England.

"The joint-stock banks keep deposits

with the Bank of England, and the private and country banks keep deposits with the joint-stock banks. The system thus depends absolutely upon the solidity of a single institution—the Bank of England. The British system has the advantage of economy in the use of money, but the American system is more exacting in its safeguards."

The chapter on Trusts and that on the Exchanges are admirable specimens of sane and lucid writing. Mr. Conant is no believer in further State intervention; but what he has to say does not come from any doctrinaire theory of the relation of the State to industry. He treats the subject from the point of view of the investor and the consumer, and asks *cui bono?* Look over all the laws that have been passed to secure publicity of accounts and to restrain fraud and extortion, and then ask yourself, Have they made my barrel of flour cheaper? Did they prevent my investing in Orange Peel common just before dividends stopped? Let us not forget, either, that the wonderful economic progress of the nineteenth century, which has diffused comfort and even luxury throughout the great body of the working population of the world in a manner hitherto undreamed of, was all the result of individual initiative, which has made every one of us a sharer in the "unearned increment" produced by discovery, by invention, by the application of accumulated and accumulating capital.

BOOKS OF THE WEEK.

Ancient Kalendars of the University of Oxford. Edited by Christopher Wordsworth. Henry Frowde.

PUBLISHED THIS MONTH

Angell's Text Book of General Psychology

By Prof. JAMES ROWLAND ANGELL, of the University of Chicago. 396 pp. 8vo. $1.50 *net.*

This book is written in the belief that psychology has now reached a point where students may advantageously be given a more distinctly functional and genetic account of mental processes than has hitherto been feasible. The point of view adopted is one from which it is felt that the truest impressions are to be gained of the practical workings of consciousness. The text is arranged with the purpose of permitting considerable flexibility in the emphasis laid upon the several portions of the subject, by means of repetition and cross-references.

Caldwell's Handbook of Plant Morphology

By OTIS W. CALDWELL, Illinois State Normal School, Charleston. 194 pages, $1.00 *net.*

This revised form of Arthur, Barnes & Coulter's *Plant Dissection* is arranged with the evolution of the plant kingdom as the organizing principle. The general style of presentation of the original work remains unchanged. The time given to some of the topics is reduced, while the number of types studied is greatly increased. Optional studies making it possible to adopt the manual to varying regions are included.

The Nation.

A WEEKLY JOURNAL DEVOTED TO

Politics, Literature, Science and Art.

FOUNDED IN 1865.

[*Entered at the New York City Post Office as second-class mail matter.*]

CONTENTS OF THIS NUMBER.

THE WEEK 511

EDITORIAL ARTICLES:

The Garfield Plan 514
The Pains of Economy 514
The Sentiment to Which Lawson Appeals 515
Rum and Politics 516
Begging as a Fine Art 516
Hide and Seek in the East 517

SPECIAL CORRESPONDENCE:

The Poetry of Arabia and the Ballad Problem 518
The Coronation of Napoleon I. 519

CORRESPONDENCE:

The Auctioning of Office 520
Harvard and Technology 520

NOTES 521

BOOK REVIEWS:

The Recent History of the South American Republics 524
Wendell's Seventeenth-Century Literature .. 526
Five Novels 527
Routine and Ideals 528
Classical Echoes of Tennyson 529

BOOKS OF THE WEEK 529

TERMS OF SUBSCRIPTION.

Three dollars per year in advance, postpaid, in any part of the United States or Canada; to foreign countries comprised in the Postal Union, $4.00.

The date when the subscription expires is on the address label of each paper, the change of which to a subsequent date becomes a receipt for a remittance. No other receipt is sent unless requested.

Remittances at the risk of the subscriber, unless made by registered letter, or by check, express order or Postal Order payable to "Publisher of the Nation."

When a change of address is desired, both the old and new addresses should be given

Address THE NATION, Box 794, New York.

Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

Fifteen cents per agate line, each insertion; 14 lines to the inch.

Twenty per cent. advance for choice of page or top of column.

A column, $20 each insertion; with choice of page, $24.

A page, $60 each insertion; front cover page, $80.

Advertisements must be acceptable in every respect.

Copy received until Tuesday, 5 P. M.

MUSEUM of FINE ARTS
BOSTON, MASS.

INSTRUCTORS	SCHOLARSHIPS
E. C. Tarbell, F. W. Benson, Philip Hale, Drawing and Painting	Paige Foreign Scholarship for Men and Women.
B. L. Pratt, Modeling.	Helen Hamblen Scholarship.
E. W. Emerson, Anatomy.	Ten Free Scholarships.
A. K. Cross, Perspective.	Prizes in money awarded in each department
DEPT. OF DESIGN	
C. Howard Walker, Director	For circulars and terms address the Manager,
29th Year	Emily Danforth Norcross

Miss Baldwin's
School for Girls,
Preparatory to Bryn Mawr College,
Bryn Mawr, Pa. Within 14 years 189 pupils have entered Bryn Mawr College from this school. Diplomas given in both general and college-preparatory courses. Fine fireproof stone building. 25 acres of beautiful grounds. For circular, address the Secretary.
FLORENCE BALDWIN, Ph.B., Principal.
JANE L. BROWNELL, A.M., Associate Principal.

ROCK RIDGE HALL
A School for Boys. Location high and dry. Laboratories, Shop for Mechanic Arts. A new gymnasium with swimming pool. *Strong teachers. Earnest boys.* Fits for College, Scientific School and business. Illustrated pamphlet sent free.
Dr. G. R. WHITE, Principal, Wellesley Hills, Mass.

Mrs. L. Chapman and Miss Jones,
Successors to Mrs. Comegys and Miss Bell,
Boarding and Day School for Girls.
For circulars address Miss C. S. JONES,
Chestnut Hill, Philadelphia.

EDGEWORTH Boarding and Day School for Girls.
122 and 124 West Franklin Street, Baltimore, Md.
Will reopen September 29, 1904.
Mrs. H. P. LEFEBVRE, Miss E. D. HUNTLEY, Principals.

School Agencies.

THE FISK TEACHERS' AGENCIES.
EVERETT O. FISK & Co., Proprietors.
4 Ashburton Place, Boston; 1505 Pa. Ave., Washington; 155 Fifth Ave., New York; 414 Cent. Bldg., Minneapolis; 533 Cooper Bldg., Denver; 80 Third St., Portland; 203 Mich. Blvd., Chicago; 325 Stimson Block, Los Angeles; Hyde Block, Spokane; 420 Parrot Bldg., San Francisco.

ALBANY TEACHERS' AGENCY,
81 Chapel St., Albany, N. Y.—Provides schools, of all grades with competent teachers. Assists teachers in obtaining positions.
HARLAN P. FRENCH, Proprietor.

SCHERMERHORN Teachers' Agency.
Teachers—Schools—Tutors—Governess—Property. Tel. 6129 18th.
JOHN C. ROCKWELL, Mgr., 3 E. 14th St., N. Y. C.

What Are Our Young People Reading?
A suggestive monograph by L. H. Jones, President of the Michigan State Normal College and author of the Jones Readers.
This discussion cannot fail to interest and instruct every teacher of youthful minds. It is accompanied by a catalogue of the supplementary readers and books for school libraries (including over 300 titles) published by Ginn & Company.
Copies will be sent free to any Address on request.
GINN & COMPANY, BOSTON.

The Nation.

NEW YORK, THURSDAY, DECEMBER 29, 1904.

The Week.

The Czar's response to the zemstvo petition is more generous than might have been expected. On the subject of a parliament he is silent; no other course, in fact, could be looked for at present. On every other count the Czar meets his petitioners half way, admitting the justice of their appeal, and promising the gradual working out of the required reforms. A mere enumeration of the eight heads of the proclamation will exhibit its amazingly liberal temper. The Czar approves equal administration of law for all classes, extension of local self-government, unification of judicial procedure, factory laws, modification of the notorious condemnation by administrative process, religious toleration, freer passport regulations, reasonable freedom of the press. How, in the face of this roster of promises, some American editors continue to interpret the ukase as a check to the reform movement, baffles all ordinary ingenuity. For the case must be judged not so much by the actual laws that may be promulgated in the next few months as by the effect the edict will have permanently upon reformers in Russia. That a constitution should be granted at the request of the first national assembly was beyond even the wildest expectations. In fact, it was freely predicted that Prince Mirsky's Congress would receive an open rebuff, on the ground that their proceedings were virtually seditious. As things stand, the recent convention finds the major part of its programme approved, and thus there is given every encouragement for other reform assemblies to renew the work so auspiciously begun.

Yet one should not rashly assume that the Czar is fully committed to the inferences which will be drawn from his response. He knows well that freedom of movement and education for the peasants—as planned in M. de Witte's report—cannot be suspended when they begin to be troublesome to autocracy. He realizes undoubtedly that successful local governments will emphasize the desirability of a parliament, that free transit of foreigners means the spread of liberal ideas, and that liberty for the press involves the awaking of the people to political self-consciousness. Upon these consequences of his action the Czar can hardly look with equanimity. Indeed, one may believe that he has yielded rather to the pressure of a disastrous and unpopular war than to any personal zeal for reform. The fears of a Plehve may play a considerable part in his decision along with the generous hopes of a Witte or Mirsky. But, willingly or unwillingly, the word is said, and Nicholas II. stands openly committed to the views of his liberal ministers. Under easier conditions he may be tempted to listen again to the reactionaries, but he cannot decree forgetfulness of the hope he has himself held out to his people.

"Corollaries of the Monroe Doctrine" depend altogether upon person and place. It was, for example, long held in Europe as an unquestioned corollary of the Doctrine that the United States should keep its fingers out of the Old World pie. Hence, when Uncle Sam suddenly appeared as the boastful owner of the Philippines, *Punch* asked him quizzically, "Any relation of the late Col Monroe?" But the corollary which Mr. Root dwelt upon at the New England dinner on Thursday night related to this continent, and to our duty to make all American republics "just." He declared that the correlative of saying Hands off to foreign Powers was saying ourselves Hands on. We cannot, he affirmed, justly assert the Monroe Doctrine "unless we also say that the American republics are themselves to be just." Easily said, but no one knows better than a lawyer and statesman like Mr. Root that there is no harder question to answer than "What is justice?" It is immensely more difficult than "What is truth?" Jesting Pilate asked that question, but did not stay for an answer. We would gladly wait for Mr. Root to explain what he means by the American republics being compelled by us to be just. Is the quality of justice strained? Can a people be filled with the spirit of justice at the same time that they are with cannon shot? Do we mean that the republics to the south of us will be just when they do just what we order? Such are the puzzles which confront us when we begin wandering among corollaries of the Monroe Doctrine.

Rumblings at Washington indicate that Venezuela is to be the first material in the great experiment of "making American republics just." The President is represented as being exceedingly "impatient" over the course of government in Venezuela; and everybody knows that there is nothing like an impatient temper as a preliminary to a lofty act of international justice. We have altered the proverb, so as to make it read, *Indignatio facit justitiam*. The details of Venezuela's great offending are a trifle vague. We read that her customs revenue is falling below the estimates. If that, however, were a heinous crime, Secretary Shaw knows who would have to flee the officers of justice. For a nation with a big deficit to coerce another because it has a little one, would, we fear, make the world laugh instead of stand in awe. There is also complaint that the high courts of Venezuela interpret and apply the law of their own land, completely ignoring the domestic laws of the United States. This is said to be an outrage, and they are all honorable men who affirm it. The case being thus strong, we think it a mistake to drag in anything about asphalt concessions and the Asphalt Trust. That is to incur the risk of defilement with what the melancholy Philadelphia bankers used to call "pitch"—probably because their money so hopelessly stuck to the asphalt securities. Man or nation that sets about making another "just," must be sure of justice in the party of the first part. Even the Big Stick would not look pretty all dripping with asphalt.

Secretary Hay washes his hands of the Hague Conference with an excellent good grace. Recalling without rancor the unwillingness of Russia to be represented at The Hague and the qualified adhesion of Japan, he congratulates himself upon the cordial response President Roosevelt's invitation met from all other Powers. With these preliminaries he regards the incident as temporarily closed, and is content to "let the future conduct of the affair follow the normal channels." Such is the rather disappointing conclusion of Mr. Roosevelt's gallant appeal for peace. That it has been wasted, we decline to believe. The subjects of neutrality and of contraband need as much as ever to be threshed out. They have, as Mr. Hay pertinently remarked, been thoroughly advertised by the abortive attempt to reassemble the Hague Congress. Meantime, several decisions by Russian prize courts will serve as valuable precedents when the matter finally does come up. So President Roosevelt need not regret in any way his magnanimous project of calling a peace conference in the midst of the greatest war of recent times.

To thank the President for a Supreme Court decision may be only a recognition of the activities of the Attorney-General's office in the case. Or, again, it may be merely a courtesy of the Japanese kind which acknowledges that all victories are due to the "puissance of the Emperor." But it is shrewdly to be suspected that Chief Hanrahan of the Brotherhood of Locomotive Engineers, who last week congratulated Mr. Roosevelt on the successful termination of the coupler case, really believed that the Su-

preme Court had settled the matter in favor of the brakeman in order to please a President who wants a "square deal" for all. Be this as it may, Mr. Roosevelt has done nothing to discourage the impression that he is the "whole thing," and if we hear of appeals to him to help in discovering lost children, why, after all, should he not be pictured as whispering humane opinions to complacent sitters upon the Supreme Court bench? Such a view of the Presidential office is but an exaggeration of that neo-Federalism into which we are driving deeper every day.

Gen. Wood has discovered that the Filipino soldiers are too well fed. He reports that they do not work so well on Uncle Sam's generous rations as when they had only a little fish and rice to eat. This may be proper matter for a military report, but it reflects unconsciously the true Imperialist point of view. The chief end of the natives is to work for their conquerors—or to be "worked" by them. This doctrine was set forth with all innocence by the London *Morning Post* recently, in discussing the labors of missionaries among the Kaffirs. Might not Christianity disincline them to work? Hard labor was the real blessing for them, and beside it "a knowledge of spiritual technicalities" was unimportant, gravely said this organ of British Imperialists. And then, with delicious inability to perceive its own humor, it added that the missionaries ought to be warned that "what they preach about religion is readily applied to politics by the half-educated Kaffir." The implication is, of course, that the fully educated Englishman keeps his religion and his politics severely apart.

As Miss Alice M. Robertson pointed out in a late discussion of the movement for inserting a prohibition c'ause in the enabling act when Congress authorizes the admission of Indian Territory either as a separate State or in company with Oklahoma, it is not an attempt "to bring in prohibition where there is liquor," but "simply to continue prohibition where it now exists." To the testimony of the newly appointed postmistress at Muskogee may be added that of Capt. A. S. McKennon, one of the original "Dawes Commission," and the observation of Mr. Bonaparte. What is being urged upon the Senate now by the Indian Rights Association is that an amendment be added to the bill which has already passed the House, reserving Federal jurisdiction in this matter for ten years, or until satisfactory local laws shall be enacted. Lacking such an amendment, Government control in Indian Territory will cease after March 4, 1906. It is but scant justice to include such a provision in the enabling act; agreements made between the various tribes and the United States in 1897, 1898, and 1902 contain positive guarantees of perpetual prohibition of the sale of liquor.

All the peculiarities of the Wisconsin Republican situation did not disappear on election day. A United States Senator is to be elected this winter if possible. The Stalwarts—"National Republicans," as they were called on the ballot—who fought the direct primary tooth and nail in the campaign, now demand that the new primary law shall go into effect at once in the choice of a successor to Mr. Quarles. The Senator himself has gone so far as to file nomination papers under La Follette's law. Meanwhile, the Governor's adherents, who have now won their four years' fight for direct nominations, are prepared to choose their Senator this year by the old plan of a legislative caucus. The reason for the reversal of positions is plain enough. Quarles cannot possibly be chosen by the caucus, while he might conceivably have a plurality in the primary. There are about 50,000 Stalwarts —that number, at least, was about Peck's lead over Parker, and Roosevelt's over La Follette in the State. There are more than 220,000 La Follette Republicans. If they should split between four or five candidates, and some should favor Quarles on personal grounds, there would at least be hope. Gov. La Follette himself was bound to remain at his post so long as the reforms for which he stood were still to be fought for. But to-day all have been put through, except for a railroad-rate commission bill, and the Legislature will not oppose him this year. One of the obvious possibilities is a deadlock on the Senatorship, lasting until the rate bill becomes law. Then it might be that the Governor would feel freer to enter the national arena at the call of his party.

Connecticut Republican politicians will be as indignant as Lord Melbourne at the attempt of the Rev. Dr. Smyth of New Haven, and other clergymen, to make religion appear to have a bearing on public life. These impertinent ministers are organizing a movement among the churches to secure a worthy United States Senator in succession to Hawley. They have the impudence to assert that neither of the two candidates before the Legislature, Fessenden and Bulkeley, is fit to represent the State. It is not, with them, a question of being happy with either were t'other away, but of being disgusted with both, and of feeling that Connecticut is disgraced by being shut up to a choice between two such men. Dr. Smyth and his brother-clergymen are, of course, in for grave rebuke for "meddling," and for "bringing the Church into disrespect." But we suspect they know their own business. If religion is to sit by without lifting a finger when corruptionists are put forward for public honors, she will soon not only despise herself, but be despised of all men. The Connecticut example is one for other States to follow. There is no interstate commerce law forbidding its transit across the New York boundary.

Election day in Colorado was a mere preliminary to the fight between the two parties this year. The Governorship is to be bestowed, apparently, not on the candidate for whom the largest number of votes was deposited in the ballot-boxes, but for the one who is able to have the largest number of votes for his opponent thrown out as fraudulent. The two sides, however, are using entirely different weapons. When a Democrat has been implicated in election frauds, he is punished for contempt of court, while the Republican charged with identical practices is indicted in the regular way and held for trial. If this is to be regarded as a contest of efficiency between the two methods, government by injunction is badly beaten. A recent census shows that in Denver only eighteen Democratic election officers are in jail for violating the Supreme Court's extraordinary order, while in Pueblo no less than thirty Republican workers are under indictment by the grand jury. The throwing out of five precincts in Denver cuts down Adams's 11,000 plurality considerably. The face of the returns in them showed 1,386 Democratic to 339 Republican votes. It is said that the same action will be asked by the Republicans in three more precincts. One of the most peculiar features is that the Democrats are barred from taking the case into the Federal courts because the court did not interfere with the vote of the disputed precincts for Presidential electors. It appears to have decided, in effect, that precincts too corrupt to be allowed to affect the election for Governor were nevertheless fit to take part in the choice of a President.

Commissioner Pal'as's advertisements in front of the Public Library must go. Judge Scott has found the contract to be beyond the Commissioner's powers and illegal. The decision is important, because it may cover many other cases in the borderland of law. Judge Scott emphasized the fact that the parks existed for certain well-defined beneficial purposes, none of which was furthered by the letting of advertising space. Accordingly, "the Commissioner had no authority, either by the express terms of any statute or by any reasonable implication, to grant a license for the exhibition of advertisements." The Court further held that the facts that the surface thus let was a temporary fence, and that the contract provided revenue for the city,

altered in no way the essential illegality of the act. The case is further interesting because it was won on a taxpayer's suit brought by Mr. Calvin Tomkins, president of the Municipal Art Society. His good success shows that substantial redress for official negligence and wrongdoing may be more quickly and easily secured than is generally imagined. And while the decision is a precedent only for park advertising, it is impossible not to see its inferential relations to the matter of Subway advertising.

With the reappearance of the Biondi case in the courts, we have a very interesting case of implied contract. Biondi held from the late director of the Metropolitan Museum an agreement to exhibit the now famous group, "The Saturnalia." This colossal bronze was shown privately, and the trustees declared that it was unsuitable for exhibition; so it was withdrawn from the statuary hall, and Signor Biondi was offered an indemnity for the expense occasioned by the contretemps. He declined this indignantly, and, holding that he had a formal contract with the representative of the museum, sued for damages. The affair is of a mixed sort, and a decision might bring into the realm of law a class of transactions usually conducted informally. In fact, the business aspect of loans to museums might well tax the acumen of any judge, for it must be admitted that a museum gives a quite tangible return for the temporary possession of rare works of art. Often a timely loan saves a collector considerable sums for storage and insurance, while the publicity given to his art treasures increases their potential value at a sale. But it is a question whether these incidental advantages are in any sense a part of the contract. They cannot be estimated accurately, nor are they ever paid for expressly. It seems, then, that in accepting a loan a museum is merely offering a facility not promising a service; and that the lender, again, is merely doing a courtesy, and not rendering a service for valuable consideration. In short, it seems that agreements of this sort quite lack the quality of true contracts, and fall under the class of gentlemen's agreements.

The petition for a paid football coach, signed by fifty-four Harvard graduates, contains sentiments that, from gentlemen of their dignity, erudition, and love of learning, are surprising: "We would rather see football discontinued than see Harvard continuously represented by teams that might have won, but do not win." The object, then, of football is merely to beat Yale. We had supposed hitherto that college athletics had their chief justification in their incentive to physical exercise and a wholesome life. What becomes of all those disinterested college presidents and professors who have assured us that football is the mightiest moral agency of the present generation? What becomes of those fervid speeches ending in *mens sana in corpore sano?* What becomes of the conviction that the self-restraint exercised by the football player is a sublime lesson to undergraduates? What becomes of the theory that the football field is our finest school of manly strength and of all the cardinal virtues? Would football cease to confer these priceless benefits upon Harvard even if Yale continued to win forever? Is not the exercise as good when Harvard is defeated? Is there not the same splendid opportunity to exhibit self-restraint? Has this "magnificent sport" suddenly become brutal and tricky because Harvard cannot succeed at it? Will a paid coach and a succession of Harvard victories restore the game to divine favor and invoke upon the players the blessings of heaven?

Imperial Federationists will welcome the report that Sir Wilfrid Laurier is committed to the project of a Canadian navy. But if these ships were already patrolling the two coasts of the Dominion, the real problem of sharing in the work of Imperial defence would be little nearer a solution. In fact, all plans of this sort are highly abstract. They rest upon the sense that it is unfair that the colonies, which enjoy the protection of England's military and naval establishment, should contribute little or nothing to its support. But is there really any practical remedy in sight? Colonial sentiment would be strong against direct contributions to the naval and military budget. In Canada it was impossible to get Parliament even to pay the expenses of the contingent of troops sent to the South African war. On the other hand, any contribution to Imperial defence that is indirect is largely valueless. For example, a tiny Canadian navy and half-a-dozen similar fleets, none of which, presumably, could constitute a serious fighting line, would do very little to strengthen the British navy. At most, it would relieve a few cruisers from their customary round. To amalgamate these separate colonial squadrons in time of war would be a vexatious matter; good fleets are not made in that way. In fact, no really business-like apportionment of expense for Imperial defence seems possible short of a visionary pan-British Parliament.

Mr. Chamberlain's protectionist speeches avail at least to bring out the sordid and socialistic nature of his doctrine. In a foreigner, we can always see a vice more clearly than in ourselves. Our own high-tariff orators bamboozle us freely, but we see through Mr. Chamberlain with ease. In his latest deliverance at East London, he went further than ever in promising a millennium under a protectionist régime. All he wanted was to give every British workman employment all the year round at higher wages, and a customs duty was the true magic to do the trick. With rare magnanimity, Mr. Chamberlain asked only for the votes of those who did not think they were "as well off as they ought to be," and who were not ready to admit that "their condition cannot be improved." In other words, every discontented or greedy man Mr. Chamberlain claimed as his own. Like another Jack Cade, he bids his followers "be brave, for your captain is brave and vows reformation"; nor does he forget to add: "All shall eat and drink on my score."

No little stir has been created in Germany by the announcement of the discontinuance on January first of the *National Zeitung*, long one of the most influential organs of public opinion in that country. Writing in the Berlin *Nation* on this "regrettable ending" of so valuable a journal, Dr. Theodor Barth declares that the event would not have attracted so much attention if it were not in a sense typical. There are many other newspapers, particularly those of a political cast, he says, which are on the verge of dissolution, or which can be carried on only with heavy losses and increasing difficulties. The old idea that a newspaper is a sort of pulpit from which certain fixed theories are taught and fundamental principles of art, politics, and literature are defended, is becoming outgrown, Dr. Barth concludes. The desire to influence the minds of the public has been displaced by the wish to make every possible cent out of the sale of a print-covered piece of paper. "Along with the cigarette guaranteed free from nicotine and the wine which is without alcohol, we have the newspaper which is guiltless of any convictions." On the other hand, the Socialist newspapers offer examples of journals which have particular doctrines to teach, and which, so far from reflecting the views of the capitalists, are often supported by collections among day-laborers. The continued influence of Dr. Barth's own weekly, as well as the unusual success of that political free-lance, Maximilian Harden, editor of the weekly *Zukunft*, show that the man of ability who has opinions to express can still find his audience. And it must be noted that in Vienna Dr. Singer's liberal *Zeit* has grown from a struggling weekly into a strong and widely read daily. Finally, the commercialized newspaper and the newspaper trust have not yet been with us long enough to make their lasting financial success certain.

THE GARFIELD PLAN.

There is no good reason why the first report of Mr. James A. Garfield of the Bureau of Corporations should be received with either ecstasy or terror. It is a sober document, telling a plain tale. It describes a condition which all honest men deplore, and suggests a remedy which rational men will discuss without falling into hysterics. Mr. Garfield does not profess to have found the philosopher's stone of the Trust question. His report is simply a modest but careful piece of work, bristling with statistics and fortified by legal citation, which forcibly calls attention to the need of doing something to regulate corporations engaged in interstate commerce, and propounds a method of going to work to do it. His plan is eminently one to be debated in calmness like his own. What are its merits? What are its defects?

First among its good points we place its advance over the earlier crude notion of President Roosevelt, that the one thing needful was to discriminate delicately between "good" and "bad" Trusts. The former were to be given the Executive blessing; the latter to be put under the ban. But this was the dictum of a sentimental social reformer. Mr. Garfield is a lawyer, and knows that law must deal with overt acts, not with the hidden soul. Accordingly, his classifications are legal, not moral. He would not have Congress or the President undertake to read the hearts of men carrying on commerce between the States, or to scrutinize their motives, but would have laws drafted to cover all corporations in a given class. This is the practical spirit of the lawmaker, as opposed to the vague longings of a millennial dreamer, and as such is to be welcomed. We shall hear no more of fanciful distinctions between good and bad Trusts. The one question for all is, Do they or do they not violate the law?

Another high merit of the scheme of control advocated by Commissioner Garfield is that it is presumptively Constitutional. The proposal to compel corporations doing an interstate business, or engaged in foreign commerce, to take out a Federal license seems to fall under the broad grant of power to Congress to "regulate" interstate and foreign commerce. Congress may impose such conditions as it chooses. It may tax at will. Whether wise or not, the plan is apparently lawful. It is not one of those happy-thought improvisations which collapse under the weight of legal precedent and Constitutional guarantees. To compel corporations to obtain a Federal charter would be doubtfully constitutional; but to make them submit to a kind of franchise tax, as a preliminary to the right to conduct interstate or foreign commerce, is seemingly within the powers granted to Congress. It is something to get a plan which does not at once dash its brains out against the wall of the Constitution, or does not depend upon that almost impossible thing, the adoption of a Constitutional amendment.

But while thus praising Mr. Garfield for sticking so closely to what is within Congressional power, we are by no means so confident as he appears to be of Congressional wisdom. His plan is only an outline. It scarcely touches details. Yet in matters of this kind details are everything. The Commissioner of Corporations affirms that a statute enacting his ideas would have to cover such diverse and difficult topics as "offering securities to the general public"; "affecting labor conditions in two or more States"; "affecting prices of goods or raw materials in two or more States"; as well as "lack of personal responsibility of managers, improper use of stock as a kind of currency, lack of proper publicity as to terms of organization, over-capitalization, etc." It is a formidable list. Before Congress gets through the whole of it, and frames each item nicely into a general law, we think a good deal of water will have flowed under the bridge. The license to do business is to be granted, or sold, only when certain "requirements" are met; but the entire *crux* lies in formulating those requirements.

Supposing that Congress finally lays them down in a comprehensive statute, other difficulties will immediately arise. Mr. Garfield frankly admits as much. His eyes are not shut to the means of legal evasion. Corporations may form subsidiary or holding companies in all the States where they desire to operate. Most serious obstacle of all, the courts may intervene to limit the application of the law or defeat its intent by judicial decision. The Commissioner confesses that the opinion of the Supreme Court in the Knight case (156 U. S., 1) is "apparently opposed" to the proposition that Congress may grant a "power to produce" as a means of effectively regulating interstate commerce. Into this legal question it is not for us to go. The Supreme Court, as now constituted, might modify the principle laid down in the Knight case, which was, for the rest, very narrowly defined, and could not be extended beyond the actual facts therein involved. But it is evident that judicial review may be looked to, in all this matter, as a remedy for demonstrated injustice; while if it is a question, as some excited commentators assert, of extinguishing overnight the rights of forty-five States, why, there are the delegates of those States in the United States Senate to prevent that outrage.

That the public mind in this country is feeling after some kind of national control of corporations which are national in their activities, we think no intelligent observer will dispute. Commissioner Garfield does not overstate the general dissatisfaction with existing laws and practices. Some corrective will be applied, and we must cast about to find one that is both just and efficient. Merely as an aid in this quest, the Garfield report is of great value. It contains no panacea. It will not save Congress the need of racking its brain to hit upon the best method. Tremendous labor will have to be done before a practical scheme of Federal control of corporations is worked out into a law able to run the gantlet of the courts. But Commissioner Garfield has collected materials and suggested a procedure which will lighten the toil of others; and his plan should be sensibly considered and, if possible, perfected by sensible men.

THE PAINS OF ECONOMY.

A condition, not a theory, is confronting the Administration at Washington, and it is "the condition of the Treasury." Every day's dispatches multiply evidence of the worry which it is causing. There are many determined utterances about keeping down the appropriations, but, as Mark Twain said of talk about the bad weather, "in spite of it all, nothing is done." Yes, something is done. In a burst of retrenching heroism, it has been decided to cut out of the army bill the $3,000,000, or so, which "the annual manœuvres" cost. This will be hard on the foreign military attachés, who will now have to go elsewhere to make their education in the art of war complete. There are also rumors that the River and Harbor bill must be kept small if it is to escape a Presidential veto. A limit of $20,000,000 is said to have been fixed. Consequently, the committee will report a bill carrying only $12,000,000, knowing that it will infallibly be log-rolled up to $20,000,000 at least.

In all this rather ineffectual talk about being rigidly economical, the idea crops out again and again that it is really impossible for a Government to economize. Nor is it alone our own rulers who confess themselves helpless. The fated increase of public expenses is the theme of publicists and finance ministers in all countries. Recurring deficits make no difference. They call for new loans, or new taxes, never for a severe cutting down of the bills. Baron von Stengel informed the Reichstag that Germany's financial outlook was "dismal"—he would have to borrow $70,000,000 to get on at all; yet he was confident that any reduction of expenditures was out of the question. Similarly, Austen Chamberlain, the British Chancellor of the Exchequer, and M. Rouvier, Finance Minister of France, report mounting outlay, but argue from it, not the need of pruning estimates, but of levying added taxes.

Now, why is it that there are no steps backward from the lion's den of public

extravagance? In private life, a man whose affairs are embarrassed does not argue (unless he is a fool) that he cannot possibly lower his expenses; that all the luxuries to which he has been accustomed he simply has to have. He gives up his carriage, dismisses superfluous servants. It is only all-powerful governments that are not strong enough to retrench. The reason is largely political. Democracy has its way of fastening leeches upon the Treasury as surely as any Grand Monarque. The total appropriations represent legislation for a multitude of diverse political interests, all of them possessed of more or less power, and each of them ready to resent any diminution of its meat, in due season. They gather, in body or in spirit, about the President and the Secretary of the Treasury and the Chairmen of the Appropriations Committees, and say: "You propose to cut down expenses, do you? You want to abolish sinecures, cut off unnecessary clerkships, and dry up the usual flow of public money into our districts? Well, what we ask is how you expect to carry elections or get a majority in Congress for your pet measures if you treat us that way?"

Economy is not joyous, but grievous. Yet it is not so absolutely beyond the reach of public administrators as we are told. If they were both frank and resolute, they could effect savings. They must, it is true, have a mind above the taunt of cheese-paring. It is better to pare the cheese than let the mice devour it. Many a paring makes a cheese. But the most important thing for those responsible for the Treasury to remember is that it is policy which fixes expenditure, and that the true way to be economical is to modify or abandon extravagant policies.

The glaring policy of extravagance at Washington to-day is that of the big navy. This is dimly perceived by the Republican leaders desirous of keeping the deficit from looking offensively corpulent. At their gathering in a House committee room the other day, to discuss ways and means of keeping down the appropriations, one of them said bluntly to the Chairman of the Naval Committee, "What is the use of the rest of us trying to save? Every dollar of our economies will instantly be swallowed up by your greedy committee." The truth in this is making its way, we are glad to see, and it is announced that a decided effort is to be made to hold the naval appropriations far below the estimates.

The result will be looked for with interest. It will furnish an excellent test of the President's sincerity in his avowed desire for economy. There can be no sound reason for spending on the navy to-day three times or four times as much as we did six years ago. The huge increase proclaims either pure luxury or justified alarm. But there is not a cloud on our international horizon. The President himself glories in our peaceful relations with all the great Powers. Arbitration treaties all round bespeak the happiest state of affairs. War with England is unthinkable, and with France or Germany almost equally so. But no other nation has a navy with which ours is not more than adequate to cope. The proposed new battleships are not necessary, and, with a big deficit staring us in the face, should be cut out of the bill as the superfluity most easily dispensed with. Mr. Dooley may be right in saying that President Roosevelt interprets the simple life to mean a tremendous navy, but economy certainly does not mean it.

THE SENTIMENT TO WHICH LAWSON APPEALS.

The professional financiers who are indiscriminately lumped together in the term "Wall Street" are unable to comprehend the popular interest in Thomas W. Lawson's articles on "frenzied finance." On the other hand, the unsophisticated millions who devour these lurid tales of greed and gold, are indignant that anybody should speak cynically or flippantly of a truly penitent stock-jobber. Your banker or insurance-company president dismisses Lawson with the contemptuous comment that whatever in his stories is true has long been known, and that what is new is false. "Lawson," they say, "is obviously a blackguard; he confesses to complicity in swindling operations; he is possibly a blackmailer. Let him pass." But he still remains an obstinate fact to be reckoned with. More than one sincere communication has reached us deploring our lack of faith in the heroic Lawson. "He is doing a good work in his own way," they plead; "the least you can do is to respect his motives and let him alone."

This popular view of Lawson has its roots in certain large social and political sentiments that are but dimly apprehended in that part of Manhattan Island lying south of City Hall. Our complacent capitalists have heard faintly and from far off the wild talk of Populists and Socialists about the money devil; but they set this down as the raving of ignorance and hysteria. The Populists and Socialists, however, have simply formulated into a political creed and voiced from the platform an unrest and distrust widespread among laborers, farmers, shopkeepers, and persons of narrow incomes throughout the country. These men and women have seen our captains of industry accumulate enormous fortunes with a speed which is to them inexplicable except on the plausible theory of dishonesty. These plain people know that stocks are watered in the most shameless fashion in enterprises that remain solvent; and the the most barefaced swindling has been practised in bankrupt ventures like the Shipbuilding Trust—to cite one example from a thousand. Poor men and women have put their slow savings into companies presumably directed by men of intelligence and probity—the Amalgamated Copper, for instance—and have seen their petty provision for the future disappear in a night. Somebody has got away with that money; nobody is prosecuted by our fearless district attorneys. The question of the duped a enraged investor is, "Who is the thief?" Lawson is ready with an answer.

The answer comes, too, in the nick of time. The United States is now recovering from an extraordinary speculative debauch. Pretty much everybody, East and West, was "taking a little flyer" in Steel, Copper, or what not. When the bubble burst, there was the inevitable weeping and wailing and gnashing of teeth. The people who fared worst were often those who could least afford losses, the extreme outsiders, who hung off till the last and were then seized by the fever of gambling and went in at the top of the market. They are doubly convinced that they were not the prey of their own folly, but of the machinations of the money-power. They have hitherto been vaguely guessing concerning the details of the diabolical crime; but Lawson supplies the missing data with gratifying fulness. His descriptions of the panic-stricken Addicks, with eyes as dull as those of a dead fish, his account of blackmailing receiverships, of juggling with the judiciary, of buying the votes of five States, his charges of absolutely insatiate and conscienceless rapacity, fit in with the preconceived theories, and confirm the darkest suspicions of the unfortunates who were fleeced.

More significant than Lawson himself, who may soon be a spent rocket, is this sentiment to which he has made such a successful appeal. The people who are convinced that our laws are out of joint are—if we may judge by the recent Socialist vote — an increasing class. In a period of general prosperity they are quiescent; in the pinch of hard times they muster enough strength to be formidable in our politics. For this element the Lawson articles are fresh sinews of war. One of the shrewdest politicians of the Northwest remarked last summer: "Every grafter in Wall Street is against Roosevelt, and consequently we're for him." President Roosevelt was fortunate in having the financial support of Wall Street and the votes of those who hate it; but again in the future, as frequently in the past, there will be a sharp cleavage in politics. When that crisis arrives, such pamphlets as "Frenzied Finance," if skilfully circulated, may wreck a conservative party. Bryan's phrase about crucifying labor upon a "cross of gold" shook the whole fabric of our credit because men's minds were prepared to

believe that it expressed a truth. The seed was sown in good ground. So long as financiers of repute lend their names and influence to speculations that may properly be characterized as "frenzied," just so long will "Down with the grafters of Wall Street!" be a potent battle-cry, just so long will the utterances of a Lawson be flame to the flax.

The enemies, then, which our great financial institutions, our railways, our insurance companies, and our banks, have chiefly to fear are, so to speak, of their own household. When the Goths and Vandals prepare a descent upon our "vested interests," their most terrible weapons will be drawn from the armories of New York, Boston, and Philadelphia. The men who have promoted the vast and bottomless undertakings into which a credulous public has poured its dollars, are the real begetters of the Populistic and Socialistic parties. From the victims of their rapine, when the day of political judgment dawns, they may expect no quarter.

RUM AND POLITICS.

The presentment of the grand jury finding that the Liquor Dealers' Association raised a large fund for the corruption of the last New York Legislature can surprise no one who is familiar with the connection, here and elsewhere, between rum and politics. For many years the liquor interests, like the railway interests, have followed the policy of keeping the Legislature in good humor. Through affiliations, now with Tammany, now with the rural Democracy, and now with the Republican machine, the liquor dealers have managed to secure at each election the control of a considerable number of Senators and Assemblymen. To this nucleus of defenders they have from time to time, as occasion has required, added recruits either by direct bribery or by forming log-rolling combinations on bills of all kinds. In this dirty business, partisan lines have largely been obliterated; for when the pinch has come, Republicans have vied with Democrats in subserviency to the traffic in drink.

Men who suppose that by amending or abolishing the Raines law, or by any other legislative enactment, we shall heal or even plaster over this open sore, have little knowledge of the history of the liquor question. For hundreds of years alcohol and the vices which it nourishes have vexed Christendom, especially its municipalities. In 1635, to give one example from a thousand, Lord Keeper Coventry denounced ale-houses as "one of the greatest pests" of London, and indeed of England. Seventy years later, Defoe called tippling a "national vice" and spoke of it in terms which are entirely applicable to-day. To deal with an evil so vast in extent, so established and fortified by tradition, so deeply rooted in the weakness of human nature, is a staggering problem. Prohibition, high license, low license, and no license have all been tried, and have, in one point or another, failed. In several of the Maine cities a system of fines has established virtual license under nominal prohibition. In some country districts of the same State liquor is sold under practically no restraint except the slight Federal tax. But, whatever the law, the situation has from time immemorial been the worst in the congested portions of large cities.

We may, however, take courage from noting certain slow but steady remedies at work. One of the most potent of these is the growth of common knowledge as to the disease and crime caused by drink, and a consequent improvement in public sentiment on this point. It can no longer be said, as it was two centuries ago, that drunkenness is "a well-bred vice." The Squire Western of 'Tom Jones,' though no longer a credible character, is not an incongruous figure in Fielding's broad canvas. But the days of three and four-bottle heroes have passed beyond the recollection even of old men; and comparatively young men testify that, within the range of their memory, habits of drinking have improved. At Washington open drunkenness, especially among men in official station, is less frequent than it was one or two generations ago. Education of the masses is the one vital process; for excise laws and their administration can never rise permanently above the existing state of opinion.

Next to an understanding of the exact truth in regard to excessive drinking, the most important step forward is a general comprehension of the fact that no law can operate with equal efficiency in country and city, in the small city and the large, or in different parts of the same city. The regulations which are useful in Cobleskill and Schenevus may be preposterous in Schenectady and Albany. The hours of closing which are natural for Newburgh or for the wholesale district of New York are a formidable difficulty in the Tenderloin or the Bowery. The varying character of the population, say from the Italian quarter to the Jewish quarter, and the habits of different races add another complication. The *sine qua non*, then, for an intelligent consideration of the subject at Albany is a willingness to recognize these widely discrepant conditions. The rural lawmaker must be made to see that his personal, religious, or local prejudices cannot be enacted into laws that are universally applicable.

Since each community is plagued by its own peculiar troubles, each community must enjoy a greater liberty to cure itself. An extension of local option is, then, imperative—power absolutely to prohibit the sale of liquor in certain districts as well as power to fix hours of sale on week-days and Sundays. The amendment of the Raines law will be urged upon the Legislature that is soon to convene. As to the desirability of changes, there cannot be two opinions among well-informed people — to-day the term "Raines-law hotel" has become a synonym for a particularly offensive house of prostitution. But any movement for reform is in danger of spending itself, as so many previous efforts have done, against the granite wall of rural ignorance and indifference unless we can first win stronger support for the principle of local option. This in itself is a somewhat disheartening task. But, with local option as the wedge, the people who are striving for temperance can begin to make headway.

BEGGING AS A FINE ART.

The blessedness of giving is a topic so universally dwelt on at the Christmas season that one is reluctant to mention the kind of giving that is not at all blessed. Yet the two articles on the life of New York beggars which have appeared in *Everybody's Magazine*, at least gain the emphasis of contrast. Written by Theodore Waters, they purport to be an account of a sojourn for six weeks among professional mendicants. As a narrative of personal experience this may be more or less embroidered, but it does contain a deal of curious information about the ways of the profession and its rewards.

There is no longer a Beggars' Trust in New York, it appears, and other statutes than the Sherman law must be resorted to if the evil is to be obliterated. Yet, from the point of view of an outside observer, there are many features about beggary which appear to make it one of those callings in which closely centralized control would be particularly desirable. There is, doubtless, every morning in the pockets of four million New Yorkers a pretty definite sum which can be coaxed out of them by the right sort of pathetic appeal. There are almost a dozen different types of beggars, each one's misfortune calculated to touch a different class of hearts. If anything like the maximum possible return is to be secured every day, sound economic principles demand that the mendicants be distributed so as to appeal to the largest number of citizens, and that each one be assigned to a district where his peculiar talents may be most effective. It was on this theory that a one-legged young man named Kempton formed his organization a few years ago. While it flourished, according to Mr. Waters's narrative, not only were beggars posted scientifically, with due regard to the psychology of the particular crowds likely to pass by, but each one was provided with a "lookout" as a safeguard against police interference, and roundsmen were sent out every hour to collect the receipts.

This "Trust" when in operation was composed of adepts, and no annual report ever disclosed what were its profits. Mr. Waters was an amateur, and did business with no accessories other than a bandaged hand; but, after an hour of holding out his hat in mute appeal, he had $1.17 in nickels and cents. Where a beggar has been clever enough to offer something far removed from the hackneyed starving children or boiler explosions, his rewards begin to approach those of the masters in any other branch of art. A young man who simulated palsy with horrifying verisimilitude, was arrested one day after crawling from Fourth to Sixth Avenue, a journey so agonizing that it took him three hours. Yet the physical and nervous strain of the performance were well paid for, since his receipts in those two blocks amounted to $28.

One gray-bearded "wheezer" who bent over a broken-down hand organ, transported in a dilapidated perambulator, making a picture of dejection beyond the power of a painter to put on canvas, was found, on investigation, to be the owner of a row of houses in Hoboken. There was real genius in the "crust-throwing" act invented by a German and brought to this country by a French beggar, in which the operator first throws a crust into the mud of the streets and, a minute later, rushes out, picks it up from under the horses' feet, and gnaws it ravenously until the attentions of kind-hearted spectators are so insistent that he needs to use both hands to take in the money they offer him. Or, for horrible fascination, what picture could equal that of the Wall Street beggar who sat on the curb with his hat in one hand and his glass eye in the other Some of these men accomplish, in the open air, in broad daylight, and at close range, as perfect an illusion as the best actor can secure with all the advantages of makeup and lighting.

In many particulars Mr. Waters's observations fall in with those of Louis Paulian, who a number of years ago tried begging in Paris under a variety of disguises. His first essay in asking alms, which was in a church porch, netted 13 sous in 14 minutes, at the end of which time a gendarme tried to arrest him, not because he was begging, but because he looked "peculiar." From this it would seem that, for an inexperienced mendicant, Stuyvesant Square in New York is about twice as profitable a post as the Church of Saint Germain-des-Prés in Paris. Yet, if the average remuneration is smaller and the field more crowded, the variety and flexibility of method and perfection of organization make up for it. "There exists," wrote M. Paulian, "an association of young Protestant girls who have had the kindly idea of joining together and subscribing to buy flowers, which they take to poor girls who are ill. If these flowers went only to the poor sick girls, how heartily I should applaud the effort; unfortunately, you need only have lived a little in the beggar world to know that this is not the case. As soon as the association of which I speak became known, there was found by the side of it, and naturally unknown to it, another association, whose mission it was to trade upon the first; and so it comes about that flowers destined to cheer the garret of a poor sick girl, or to adorn the tomb of a little child, are sold in the evening at the doors of night restaurants."

People give to street beggars from a variety of motives. Some men adopt the regular policy of giving five cents to every applicant, trusting that some of the money may go into worthy pockets. Others say to themselves, "This man is doubtless an impostor, but he is nevertheless cold and hungry." The investigations of Mr. Waters show, however, that a penniless man, even if not entirely deserving, can be not only saved from hunger and cold for a night or two, but maintained in missions and free lodging-houses almost indefinitely. It is not those in need of help who make the most of the opportunities for securing it.

HIDE AND SEEK IN THE EAST.

The unconfirmed report of the presence of a Japanese fleet off Singapore has called attention to the gravity of the naval problem confronting Admiral Togo. Should he await the arrival of Admiral Rozhestvensky's vessels in Sumatran waters or in Formosan? Or should he attempt to intercept the Russians in the Indian Ocean? These questions must have occupied him and the Tokio General Staff ever since definite news of the departure of the Baltic armada reached Japan. Upon Togo and his officers rests now the whole issue of the war. A naval failure will inevitably mean the breakdown of the entire Japanese campaign and the instant imperilling of Oyama's great army.

Hitherto the naval tactics called for have been simple enough, requiring merely a stringent blockade of two ports and the attacking of the enemy whenever he issued forth. It has now become a question of strategy. Everything depends upon the judgment and foresight of the Japanese commanders. In many respects their problem is not unlike that of Admiral Sampson, though a vastly more difficult one. In both cases the attacking forces cross long stretches of ocean and may head for one of several ports of refuge, neutral and friendly. Togo and Kamimura have now to seek to divine the plans of their adversaries, and must endeavor not merely to locate them, but to locate them under circumstances favorable to the Japanese—if possible with exhausted coal bunkers, or at a distance from a harbor of refuge, or off their guard. For the odds are so much against the Mikado's sailors that they must choose the best possible time and setting for an engagement, while bearing in mind once more the necessity of saving some of their ships for future eventualities. The advantage of greater mobility is theirs.

The readiness with which Togo has taken advantage of the mistakes of his enemy lends considerable color to the report that there is a flying squadron off Singapore. The Russian fleet, unmindful of past experience, is proceeding to the East in three sections. The largest and most important, under Rozhestvensky himself, was reported to be passing Cape Town ten days ago, and should now be in the neighborhood of Delagoa Bay, or of Madagascar, to which island many colliers are believed to have been sent. The second squadron, under the command of Rear-Admiral Folkersam, has passed through the Suez Canal with the exception of two cruisers, the *Oleg* and the *Dnieper*, which are trailing after, and is probably well on its way to the Seychelles or the Chagos Islands, at one of which it is expected that the whole fleet will unite. Even here there is a difference of opinion among the experts, for there are some who look for a rendezvous at Minicoy, only a few hundred miles west of Colombo. Moving at the rate of sixteen knots an hour, the Japanese auxiliary cruisers reported in Singapore on Thursday should be off Colombo by Monday morning, and here they would be within three days' steaming of Chagos, and still nearer to Minicoy. The Japanese fleet, described as consisting of two first-class and two second-class cruisers, two battleships, two auxiliary cruisers, and twelve destroyers, would more than match Folkersam's squadron were they to meet. The latter consists at present of two battleships, the *Navarin* and the *Sissoi Veliki*, both no longer modern; three fine new cruisers, the *Zhemtchug*, *Izumrud*, and *Almaz;* and one older one, the *Svietlana*, which is still a very respectable ship. Could these vessels be defeated and destroyed before their meeting with Rozhestvensky the whole naval outlook would be changed, and his force of five powerful battleships and four cruisers would seem comparatively easy antagonists for Togo, who has, it must be remembered, but one other battleship if Kamimura is off with two.

Should the Japanese decide to await the Russians and risk all on one encounter between both fleets at their full strength, there are several places where they could lie in wait for their prey. So sound an expert as Mr. Henry W. Wilson, the well-known English writer on naval strategy, believes that the Russians will certainly head for Saigon, 3,200 miles distant from Chagos by way of Batavia, as Saigon is a French port and therefore friendly. To do so they must pass through the Straits of Sunda, where they could easily be blocked. At Saigon, Rozhestvensky would be

within 3,400 miles of Vladivostok, by way of the Izu Isles and the Tsugaru Straits. This would be the most dangerous part of his journey. If he is allowed to reach Saigon unmolested save by scout ships, he must prepare to fight for the rest of his voyage. If he should go by way of Formosa, the Japanese would be battling in their own waters. If he chose to go north of Borneo and south of the Philippines, which would very much increase the distance, Rozhestvensky would have to coal at sea or under the lee of some island, and he still could not approach Vladivostok without having to pass through one of three straits—the Tsugaru, those of Korea, or of La Pérouse at the northern extremity of Japan. The latter are on the edge of the ice-line.

Obviously, it will be at best a good deal of a hide-and-seek game. In the days of sail-power the search problem before Togo would have been still more difficult, since ships could then keep the sea for months without going near a port. Now warships must seek a harbor in order to replenish their bunkers, coaling at sea not yet being a secure procedure. By so doing, they reveal to the world their whereabouts, unless they choose the few remote harbors still unconnected by a cable or telegraph with the outer world. There are several of these in the Malay archipelago in which the Russians may seek a flying base without fear of being molested by Holland. The attitude of the neutral Powers will have a vital influence upon Japan's fate, for there are strong doubts in some quarters as to the Baltic fleet's ability to reach the East if all countries should be as prompt to insist on the letter of international law as were Germany at Kiaochou and the United States when the *Lena* arrived at San Francisco. As for the time of the final conflict, there is naturally a wide difference of opinion. Rozhestvensky himself is reported to have fixed March as the period of his arrival in Japanese waters. If Admiral Togo plays a waiting game, this date should not be far amiss. So diverse a fleet, so badly manned, and so encumbered with auxiliaries of every description, must needs move at a snail's pace.

THE POETRY OF ARABIA AND THE BALLAD PROBLEM.

To all appearance, I said, in a ten-minute paper read before the Section of Semitic Languages, at the St. Louis Congress of Arts and Science, the bearing of the poetry of Arabia on the ballad problem has never received adequate, or possibly any, recognition. The Arabists are few indeed who have passed beyond the philological and historical stages to an æsthetic appreciation of the material of their labors. Some even, excellently well read in early Arabic poetry, have asserted flatly that it had no interest as poetry for us, and could be regarded only as a source for sociology and history. Others, upon whom its haunting cadences and vistas of feeling and vision have in truth struck home, are half-ashamed to confess their seeming weakness in the presence of the great crowd of cold philologians and historians. The Rückerts and Lyalls are few; the grammarians and sociologists are many. Nor do the students of "comparative literature," to use the new-fangled term, seem yet to have discovered Arabia for themselves. To them, the name suggests first, and possibly last, the 'Arabian Nights,' with which it never had anything to do. No FitzGerald has made an Arabian poem classical and compelled the attention of the civilized world. And against the assaults of any stray littérateur whose curiosity may have been aroused, the barriers are as unyielding as the deserts themselves. To most languages a very few months' work will give an entrance; and, the entrance once forced, the garden of poetry lies open—at least it will be plain what manner of garden and what wealth of promise are there. But Arabic yields itself with no such lightness. Many are the mountain ranges to be crossed; long and wearying are the marches. Days and nights must be spent on a grammar of bewildering subtlety, a vocabulary of utter strangeness and overwhelming abundance, and a range of ideas which conceal their common humanity behind veils of novel circumstance. Assuredly, no one with a light heart "got up" Arabic.

Yet again, a great and evidently most misleading confusion lies in the very name. We say Arabian, we say Arabic; the two may be absolutely separate. It is safe to assert that the greater part of the Arabic literature has been written by men in whose veins was scarcely any drop of Arabian blood, and who lived under conditions and in a form of life as separate from those of Arabia as these from ours. The mediæval monk in Ireland, who wrote in Latin of a kind, was hardly less a Roman or Italian than the author in central Asia or Persia, Syria, North Africa, or Spain, who wrote in Arabic was an Arab. Placed in the desert, there would have been no great difference in their strangerhood. And the cause of the linguistic transfer was much the same in both cases. Muhammad and his successors sent and led the Arab tribes in their great raid which made them masters from the Atlantic to Samarcand. After the raid came the Muslim empire, in which, after a century or two, the Arabs themselves had little or no part. They vanished into the new peoples or drifted back into Arabia. The official language of the new empire remained a kind of Arabic, thanks to the Qur'an and the whole system of Islam. So there were left two things: there was still Arabia, leading its simple, solitary life much as before Muhammad stirred it to action, and there was the people of Islam, of multifarious nationalities and sects, speaking in its homes multitudinous tongues, but using officially and for professed literature a distant descendant of the language of Arabia. From the latter come what are so commonly and erroneously called Arabian literature, philosophy, science, theology—thought and learning generally. To the former, the present subject, almost no attention has been paid. Yet it is Arabian in the true sense, carrying on the blood, the traditions, the customs and life, the literary ideals, forms, and methods of the Arabian peninsula and race from uncounted centuries. For the student of comparative literature or the folk-lorist, the people of Islam writing in Arabic is an amorphous and gigantic jumble of unkindred races, foreign to one another as to all inheritances and ideas which are unlinked with their faith. Their popular literatures are as diverse in spirit and in form as they well could be; what holds of one of them can never safely be predicated of another. There unite them only the Qur'an and the sciences which spring from it, their Arabic language, and their artificial Arabic-written literature—in part a distant and lifeless imitation of the forms of the desert; in part a product, almost equally lifeless, of their common scholastic method in science and philosophy. To Arabia itself, then, and to the Arab people in its own home must the folk-lorist and student of literature turn when he would seek the true Arabian poetry.

The phenomena which they will meet there are strange enough. Of the beginnings of Arabian poetry we know nothing; they must lie with the beginnings of the Arab race. The curtain rises with the appearance of Muhammad, and from that point we can trace backward some hundred and fifty years. The Arabs show themselves producing a poetry that is singularly popular in origin and idea, singularly highly developed and polished, and singularly rich. Grimm's ballad formula, "Das Volk dichtet," holds most exactly of them, but in a different sense. There is no anonymity, but there is a broad generality of authorship. Of great poets the number was undoubtedly small, but the poetic gift was widely spread. Verses of a kind seem to have been on the lips of all, though to build the lofty, monumental *qasīda*, or ode, called for the acknowledged poet. Their poetry, too, as has been well said, answered absolutely to Matthew Arnold's definition, and was a criticism of life. It was in contact with life at every turn, and we, reading it, find again in it the true days and nights of the desert. Our best commentaries on the old poems are the records of present-day wanderings there. Further, we have in it the strange phenomenon of a literature as perfectly popular in origin and use as our ballads, which yet obeys rigid norms of metre, rhyme, and form, and has crystallized into narrow conventionalities of structure. It is true it is not literature in the precise sense. These verses were chanted and sung, stored in the memory, and passed from lips to ears. Not till after the time of Muhammad, when the need of interpreting the Qur'an and fixing the structure of classical Arabic had arisen, were they finally reduced to written form. Before that they existed in stray copies such as those which the gleemen of mediæval Europe carried as their guides, and of which one is our only source for 'Aucassin et Nicolette.' They were sung as our ballads were, and had the same standing with the people. But the perfection and finish of their æsthetic structure equalled that of the lyrics of the most polished and artificial ages. In the steppes and wadis of the desert seemed to spring spontaneously the elaborate blossoms of gardens and hothouses. Yet this, it is to be remembered,

held of their structure only. In reality and life and earnestness they were no hot-house product. They sprang in free air and sun; they knew the winds and rains of life; sedulous care surrounded them, but it was from hands hard and smooth with the sword-hilt and the spear, the care of men and warriors, of no singers of idle songs and players with metres and rhymes. It is precisely there that their fruitful paradox lies for the student of literatures.

But into a characterization in the broad of the poetry of the Arabian desert, it is unnecessary here to go. The English reader can turn to Sir Charles Lyall's translations in his 'Ancient Arabian Poetry'—brilliant alike for scholarship and poetic art—published in 1885, and to Mr. Wilfrid Scawen Blunt's translation of the 'Mu'allaqat,' recently published. Mr. Blunt has shown neither the scholarship nor the patient care of Sir Charles Lyall, but he has a first-hand knowledge of the desert which has pointed his renderings.

Again, though this poetry can be traced only to some century and a half before Muhammad, it is very certain that it had existed in essential likeness for uncounted generations earlier. Such hill flowers, as they blossom, so they fade; the memories of men cease to carry beyond limited years; only the accident that the immediately pre-Muhammadan growth was preserved in the herbarium of the early Muslim students of the classical language has saved it for us. It is true that Muhammad and Islam itself seem to have been but features in an Arabian renaissance; that Muhammad was one of its poets, spoiled by some strange inheritance and environment for art and beauty, and transformed into an Old Testament prophet; that he then, in turn, made the great Arabian movement what the West has known it. But who can tell how many such periods had preceded, how many growths of poetry had blossomed and died again, as the generations passed? So, at least, has been the after history. In the records of Arabic literature but a few generations after Muhammad, the names of new Bedawi poets cease to appear. The old poets became inviolable classics, but the desert and its life turned for the Muslim mind to memories only. Caravans must needs traverse its wastes, but its peoples are thought of only as robbers, terrible in courage, untamed and untamable. Yet, all the time, the old traditions were being carried on, and poems were being produced in the same unchanging moulds. This is plain from what we find there now. In the course of last century the desert was opened again to Europe by stray adventurers. In the fifties, Wallin brought back from his epoch-making journey some poems which were published in the *Zeitschrift* of the German Oriental Society (vols. v., vi.). Later, Wetzstein, German consul at Damascus, made collections and lectured on contemporary Arabian poetry at the University of Berlin, in the winter of 1867-68 and thereafter. Count Landberg also made very extensive collections, which, like those of Wetzstein, are still unpublished. But our most precise and widest information is undoubtedly due to the late Professor Socin in his posthumous 'Diwan aus Centralarabien.' Through this precious volume it becomes abundantly clear that the poetry of Arabia of to-day is the same in all essentials as the poetry of Arabia before Muhammad. From the sixth to the twentieth century the stream has flowed unchanging. The metres, the forms, the ideas, the types are all the same. Certainly, the Arab of to-day is not living through a great literary age, as was the Arab of the time of the Prophet; but if his is a day of smaller things, the smaller things are still the same. His poems are produced partly in stately and elaborate metres and in a vocabulary of art which is a poetical *lingua franca* recognized over the whole peninsula; partly, but to a much less degree, in the simpler language of ordinary life. This distinction held also of the ancient period, and now, as then, both forms of poetry are thoroughly popular in audience and in scope. Thus the poetry of the desert, while retaining the old forms, has not separated itself from the later life; there have been, indeed, few changes in outward conditions to need such a transference. The use of the bow may have been lost and that of firearms have come sparingly in its place, but the Arab reivers still ride on the raid in the old fashion. And as they ride, they sing to their camels, to their comrades, and against their foes, and the tribal poets sing of them in ever-renewed odes. Then these, in their turn, sink from the memories and are forgotten, and others come in their places. Like the endless generations, so unending are their songs, ever in contact with life and ever in the old moulds.

But most significant of all in its bearing on the ballad problem is one outstanding characteristic: the Arabian poet, like the Semite in general, knows nothing but a strictly subjective art. He can sing only of his own emotions; all has to pass through the alembic of his feeling and be reproduced as it affected him. He can tell no objective story, as one without, seeing and relating what he sees; he must be in the action, and what he tells us of it is what has come to him himself. Thus, a description of warriors in battle array is wrought for us out of his own pride or fear at the spectacle. The surge and swing of a charge is pictured through what he said to his soul when the shouting line rushed on. Nature, too, we know only because the stars shone brightly on his desert path or mocked in their slow march his sleepless eyes, or because the little spots of verdure and flashing pools after rain were a joy to him and gave him thoughts such and such. A ballad, then, in our sense, was impossible to him. He was not a maker, a ποιητής, but a "feeler," a "knower"—so *shā'ir*, the Arabic word for poet, means. The event was little; the man who saw it, understood it, told what came to him from it, was all. And so these Arabian songs were never anonymous. If the name of the author by chance has been lost to tradition, there stands at the head some formula, "There said a man of Taghlib," or "There said one unnamed." Some one must have said it, for it tells the emotion of some one. Western ballads tell events; who tells them is of no moment. The ballad stands as a record which might have been made equally well by any one who saw the fact. And, therefore, the identity of the teller bears no stress. After he has sung his song, another may take it and sing it with equal æsthetic right. The name of that first singer, maker of it as he was, is lost, and the song is the inheritance of the people. But, for the Arab ode, that was, and is, flatly impossible. And this cannot but raise the final question, whether it is not rather in the objectivity of our Western ballads than in their popular use or any hypothetical communal origin that we are to find the clue to their anonymity.

D. B. Macdonald.

THE CORONATION OF NAPOLEON I.

Paris, December 2, 1904.

The centenary of the 2d of December recalls great events, and has been the occasion of an entertaining study by M. Édouard Gachot. It adds one more to the numerous documents which are being brought to light on the Napoleonic period, and derives a peculiar interest from the fact that the question of the separation of Church and State in France and the denunciation of the Concordat signed by Napoleon with the Papacy is just now the order of the day.

The Concordat was the work of Napoleon; he understood that France could not be swerved from religious forms, and that the Goddess of Reason could not survive the Revolutionary period. His ambition was to reconcile the Revolution with the traditions of the past; he was too proud, and had won too many laurels on the battlefield, to play the part of a Monk; he had made himself First Consul, he made himself Emperor; the ratification, by a plébiscite, of the Senate vote which gave him that title, was a mere formality. The number of those who voted yes on the question put to them was 3,572,329; the number of those who answered no was 2,569. In the city of Paris there were only 70 opponents.

The idea of coronation by the Pope's hand sprung up in Napoleon's mind long after the Concordat. It was, it is thought, originally suggested to him by Cardinal Fesch, who was allied to his family; but Napoleon preferred at first the idea of a ceremony similar to that of the Franks, who proclaimed their chief King, carrying him on a buckler. A medal was even struck from a design by Jeuffroy and Merlen, representing him standing on a buckler. Napoleon decided that his coronation should take place on the anniversary of the 18th Brumaire. He was a very superstitious believer in dates. On the 12th Messidor, there appeared in the *Moniteur Officiel* a decree in these terms: "Article I. The ceremony of the taking of the oath and of the coronation of the Emperor will take place on the next 18th Brumaire." Then came various articles, the fifth of which said that the coronation would take place in presence of the Empress, the princes, princesses, the grand dignitaries, etc. Josephine was thus, at first, excluded from the coronation; she was to be a mere witness.

These ceremonies were, in the mind of the Emperor, to take place on his return from England, as he was determined to make a landing in that country. Everybody knows how this project was defeated, and how he turned towards Austria the great army assembled at Boulogne. On his way through Germany, Napoleon stopped at Aix-la-Chapelle; he heard mass in the cathedral, and visited the tomb of Charlemagne. He viewed in the chamber of relics the ossified arm of the famous Emperor, around which there is

a parchment bearing the words "Bracchium sancti Caroli Magni." He stopped before the armchair of the great Emperor, and was told that thirty-six of his successors had sat in it. He had long conversations with the priests of the cathedral. He was waiting at the time for an answer from Rome to his request, through his ambassador, that Pius VII. would go to Paris for the coronation; he received a favorable answer on the 11th of September. The negotiation was difficult. Cardinal Fesch conducted it for Napoleon; the Pope consulted individually all the members of the Sacred College. He told the Archbishop of Lyons: "I know much good is said of the Emperor, and that he loves religion; but he has round his person, in his Council of State and among his generals, several confidants of whom the same cannot be said, and who try to give him ideas opposed to his well-known sentiments of moderation. Well! I will pray God to dictate my duty to me."

After much reflection, the Pope resolved to go to Paris for the ceremony. Napoleon, as soon as he heard this from his uncle, Cardinal Fesch, sent to Rome his first aide-de-camp, Gen. Caffarelli, who spoke Italian well, to deliver his formal invitation. On the 6th of October, the Pope wrote his answer, and on the 2d of November began his journey. He travelled by way of Florence. Milan, and Turin, and he crossed the Mont Cenis by the road which had just been finished. Among the Alps and at Lyons he was received with extraordinary honors. Napoleon started on the 25th of November and met the Pope in the forest of Fontainebleau. Together they made their entry into Paris in the evening of the 28th. The Pope took an apartment in the Pavillon de Flore, in the Tuileries. He insisted upon one point only: Napoleon and Josephine were to be united by a religious marriage before the ceremony of the coronation. The marriage was celebrated privately on the 1st of December in the presence of Cardinal Fesch.

Napoleon personally entered into all the details of the ceremony; designating the disposition of the troops, the order of the carriages, the route of the procession. M. Gachot cites an unpublished extract from a letter written by an eye-witness:

"At six o'clock, we went to the Rue St.-Honoré to see the procession. At nine o'clock, the Pope went by, his cross-bearer before him mounted upon a mule. At ten, we saw the carriage of the Emperor; he was with the Empress and the two princes of the blood. The carriage was very magnificent: over the top was a gold crown supported by four gold eagles. The Pope's carriage was almost as handsome; over the top was a gold crown supported by four gold angels. This carriage was drawn by eight gray horses; the Emperor's, by eight coffee-colored horses of great beauty. At twelve, I went to the Cathedral."

In the procession we find none but historical names: Moncey, Murat, Kellermann, Talleyrand, Lefebvre, Bernadotte, Rapp, Savary, Berthier. The marshal bore the crown, the sceptre of Charlemagne, the Imperial globe—the "honors," as they were called—which had been taken from Saint Denis and Aix-la-Chapelle. The crown was the identical one which Charlemagne received from the hands of Pope Leo III. (This large crown, which had served before for the coronation of the kings of France, was used only for a moment, as it was very bulky; another crown was immediately substituted for it.) The other "honors" were the sword, the hand of justice, the sceptre, the spurs, the ring.

The whole ceremonial had been studied with the greatest care and in all its details —the offer of the "honors" to Napoleon, their disposal on the altar, the singing of the litanies, the benediction of the crowns by the Pope, the crowning, the taking of the oath by the high dignitaries. Napoleon, by his personal demeanor, gave an original character to the ceremony. Covered with a red velvet mantle, sprinkled with gilt bees and lined with ermine, he left his chair and marched deliberately to the altar, took with his own hand the crown, and placed it on his head. Turning towards the Pope, he bowed to him before taking in his hand the crown destined for Josephine. He went with it down the steps of the altar, and himself crowned the Empress, who was waiting for him on her knees. This moment of the coronation was happily seized by David in his famous picture, and may be said to give its real character to the ceremony. The Pope was there only as a witness; Pius VII. did not play for Napoleon the part which Leo III. played for Charlemagne. The modern Cæsar was not the Cæsar of the Middle Ages.

Mass was said after the ceremony of the coronation; and after mass came the taking of the oath. The formula deserves to be noted. The Emperor swore with a loud voice:

"I swear to maintain the integrity of the territory of the Republic; to respect and to make respected the laws of the Concordat and of freedom of worship; to respect and to make respected the equality of rights, civil and political liberty, the irrevocability of the sales of national properties; to levy no taxes and to establish none except by virtue of law; to maintain the institution of the Legion of Honor; to govern solely with a view to the interests, the happiness, and the glory of the French people."

In this formula is condensed the spirit of the French Revolution. The mention of the Concordat is of great importance, for the Concordat was, so to speak, the stepping-stone to the new order of things; and it spoke volumes to see the head of the Catholic Church sanction, consciously or unconsciously, by his presence the conquest and the results of the Revolution.

While this event took place, Napoleon was thinking of invading England; he was making great preparations for an expedition which was to change the whole equilibrium of Europe and of the world. The London *Times* is publishing every day an extract from the *Times* of 1804, and what do we read in the extract of November 29, a few days before the coronation?

"The coronation ceremonies have drawn an unusual crowd, not merely of persons from every department in the Empire of the French, but also of foreigners from all countries with which his Imperial Majesty is not, at present, at war. Spaniards, Italians, Neapolitans, Prussians, Austrians, Germans, Dutch, Portuguese, Americans are all feeding the avarice of the Parisians, for the impure gratification of beholding an unhallowed ceremony, the principal trait of which is the novel contrivance of disgracing the Christian Religion by obliging the Roman Pontiff to pour holy oil and place the Imperial Crown on the head of the greatest enemy existing to himself, his dignity, and his faith."

Who could have foreseen in those days of 1804 what was to be the destiny of the new Cæsar?

Correspondence.

THE AUCTIONING OF OFFICE.

To the Editor of The Nation:

Sir: Your correspondent, Dr. Schrader, who suggests, in your issue of the 15th inst., that senatorships be sold at public auction, in order that the State rather than the legislators may receive the purchase price, will be interested to recall that a great philosopher has, in all seriousness, advocated the sale of public office. While he restricts the recommendation to a monarchy, and even quotes Plato as being opposed to this procedure in a republic, yet the reasons that he advances seem quite applicable to present conditions in some republics—in fact, as is so often said of the wisdom of the ancients, "strangely modern." Says Montesquieu ('De l'Esprit des Lois,' Book V., chap. 19):

"Dans une monarchie où, quand les charges ne se vendroient pas par un règlement public, l'indigence et l'avidité des courtisans les vendroient tout de même, le hasard donnera de meilleurs sujets que le choix du prince. Enfin la manière de s'avancer par les richesses inspire et entretient l'industrie: chose dont cette espèce de gouvernement a grand besoin."

Is not the suggestion that the sale of offices will tend to encourage "industry" delicious? If Dr. Schrader can only make it appear that it is an "infant" industry that will be encouraged, may he not hope for the powerful assistance of the Home Market Club in his propaganda?

Howard L. Smith.

University of Wisconsin, December 19, 1904.

HARVARD AND TECHNOLOGY.

To the Editor of The Nation:

Sir: The recent Rogers centenary observed by the Massachusetts Institute of Technology in honor of its founder and first president brings a realization of the considerable age of technological education, which has so generally been regarded as an "infant industry" in intellectual economics. The Institute of Technology is now upon its fortieth year, standing as leader, by virtue of its size, its system, and its works, of an army of institutions of technological and engineering education. As was last week noted editorially in the *Nation*, this leadership is in no respect more necessary to the educational interest of the country than in its broadness and elevation of conception as to "engineering education." What President Rogers and President Walker have done, the intellectual interest of the country calls upon every technological school to emulate, and upon the Massachusetts Institute of Technology to hold pure.

This is no slight task, for the demands of scientific instruction are as insistent to-day as the lofty disregarding of them was formerly repressive. But, in truth, the tide turned with the half-century in this as in many other intellectual conceptions. And to-day, as we see the growth of a salutary counteraction to that vigorous reaction, we see also the need of caution, lest this new force also direct itself into disadvantageous channels.

To-day, the educational community is in-

terested in a suggested union between Technology and Harvard University. The movement is not a new idea, nor is the practice new; Harvard and other universities have already their scientific schools. But this method is almost original, and the Institute of Technology, when taken as a subject, puts the principle to its severest test. Dissent is not wanting. The following resolution, adopted at a meeting of the Union of German Engineers at Munich, September 12, 1904, expresses clearly the conviction of eminent representatives of German technological schools and universities:

"It is not advisable, so far as can be foreseen, to attempt to meet the need of new technological schools by the addition of technological faculties to universities, but rather by the establishment of independent institutions; for the technological schools would be hindered in their independent development by attaching them to universities. This separation should not, however, impede the welcome development of intellectual good will between the two institutions. The attachment to universities would also in no way involve economies of consequence."

This is no uncertain word; it expresses the conviction that technological education is as distinct a work and as distinct a thing in the world as (let us say) the journalistic school of New York. As an opinion from Germany, it gives perhaps the most notable and certainly the most authoritative foreign opinion which can be summoned to the question. At home, utterances have for the most part awaited the publication of a detailed plan of procedure; thus expressing, perhaps, a public editorial opinion that circumstances may alter cases. This public attitude may be regarded as expressed briefly in an article which appeared recently under the signature of President Thwing of the Western Reserve University. In this article President Thwing discusses "trust" forms of education in general, and lays down as one necessary provision, that an institution should seek to preserve its historical life—its "traditions," as the word is used in such connection. As the *Nation* last week pointed out, the traditions of the Massachusetts Institute of Technology are largely and vitally those made by President William B. Rogers and President Francis A. Walker. In the explicit provision for liberal and broadening education, always insisted upon by these distinguished men, there was ever the recognition of the scientific character and earnest, practical purposefulness of this precise culture work. So emphatically did the eminent presidents adhere to this, and so closely were they in the spirit of the recent Munich resolutions, that each of them, upon occasion, emphatically decided against university coördination such as is suggested to-day. The preservation of such traditions would seem to be only the preservation of Technology's integrity.

Upon this basis, it would appear, then, that the issue of alliance between the two institutions is that of the preservation of the highest form of technological education itself. Technology's centenary celebration becomes significant indeed in marking a new problem in the growth of such education, and in determining the direction of its solution. ALUMNUS.

December 17, 1904.

Notes.

Persons having material—especially unpublished MSS. or letters—likely to be of service in the preparation of a biography of the late Edward Rowland Sill, are requested to communicate with Mr. W. B. Parker, 30 Stoughton Hall, Cambridge, Mass.

Prof. Angelo De Gubernatis informs us that he is just beginning the impression of his 'Dictionnaire International des Écrivains du Monde Latin,' of which we have already spoken, and hopes to finish with it by the end of May. An octavo volume of 1,000 pages, this dictionary will contain from five to six thousand biographical notices of writers on Latin subjects, of the present day. There is still time for the tardy to send in personal-bibliographical particulars concerning themselves to the editor, whose address is No. 11 via S. Martino al Macao, Rome.

Macmillan Co. are about to bring out 'Sunny Sicily: Its Rustics and its Ruins,' by Mrs. Alec Tweedie; 'Familiar London, Painted by Rose Barton'; 'The Hardy Country,' by Charles G. Harper; 'The King's Homeland,' by W. A. Dutt; and 'The Art of Creation,' by Edward Carpenter.

Methuen & Co., London, will publish early next year 'De Profundis,' written in Reading jail by the late Oscar Wilde.

James Flint's 'Letters from America' is one of the very best of the reprints in Mr. Thwaites's "Early Western Travels" (Cleveland: Arthur H. Clark Co.). This Scotchman was a friendly and level-headed observer, who came over in 1818, landing in New York when the city outlines were obscured by the masts of vessels, when the Lombardy poplar was the favorite shade tree, and the census showed still some 600 slaves on the island. Flint has also to tell of Philadelphia, in passing, and of negro pews even in Quaker meeting-houses; of Harrisburg, Pittsburgh, Wheeling, etc. His letters are mostly illustrative of the Ohio valley, and of Indiana and Ohio in particular. There is a graphic description, at page 287, of an Indiana camp meeting. Water in the Ohio was abnormally low, as it is at this season. Our traveller saw something of Southern slavery in Kentucky, and noted the friction over fugitive slaves on the northern border. His comments upon the system and its victims are sound and humane. At Jeffersonville, Ind., he fell in with "a gentleman from Carolina," who, "after a hired man had given him slippers, and asked him for his boots to be blacked, exclaimed, 'As I wish to see my Maker, I would not live in a free State, where one white man cleans the boots of another.'" Flint's narrative is very valuable for its minute particulars, especially in economic matters.

'The Love Poems of Byron' has been added to the tiny "Lover's Library" (John Lane), printed in the regulation green ink and purple border. "She walks in beauty," "Stanzas for Music," "Maid of Athens," "Farewell, if ever fondest prayer," "Well, thou art happy," keep company with others less famous and enduring, with translations and imitations.

A bulky quarto, the first volume of "The Home Library," is sent us from the press of the American Publishing Company of Middlebury, Vt. The book is of the sort that lies on the table in the best room of the farmhouse; and, indeed, it is too heavy for the hand. It is a collection of extracts from well-known works, familiar poems, etc., and the selection is made with some judgment, although the arrangement is haphazard. The numerous photographic illustrations are also capriciously inserted, and few of them have any connection with the text. Many are uninteresting and of inferior execution, but some of the Vermont scenes are of striking beauty. The book is superior to most of its class, and will no doubt be welcome in many homes.

Even little books have fates of their own, and the tinier the *libellus* the stranger often the *fatum*. Some, especially, are indestructible and irrepressible; sooner or later they reach the light. When Scott was writing 'The Lady of the Lake' and 'Waverley,' Marjory Fleming, known as "Pet Marjorie," *ætate* 6-9, was writing her Journal, a life of Mary Queen of Scots, and other works. But it is only some forty years now since tantalizing fragments began to appear, fragments which yet brought the little poet into the great 'Dictionary of National Biography.' And again, only within the last year have they been fully published from the verbatim copies which the happy care of Dr. John Brown made. The present American edition ('Marjorie Fleming: The Story of Pet Marjorie, together with her Journal and her Letters,' by L. MacBean, Putnams), adds Dr. John Brown's sketch. The juxtaposition is unhappy, for the editor has imitated Dr. Brown's method of running comment, and has in no way reached his curious felicity. But Marjory's own words will live with the language. They are those of a healthy child, and of a healthily conscious artist; they have feeling and observation, and, above all, the mystery of style and charm. She is the one example without affectation or sickliness of the child with a pen.

Messrs. A. & C. Black's series of descriptive books illustrated in color is drawing out now in long array, and evidently has met the popular mind. In them the contributor of the "letterpress," to use a politely ambiguous term, is in much the position of the librettist of an opera, with the difference that his work is done in docile sequence and more or less annexion to the pictures. Such cases as Mr. Kelly's 'Egypt,' where artist and describer happily combine, are of necessity rare. In "Bonnie Scotland," painted by Sutton Palmer and described by A. R. Hope Moncrieff (Macmillan), the describer has exercised a tolerable independence and produced a very entertaining book, full of bits of history, character, and custom, anecdote and reminiscence, all much fresher than might easily have been expected; ties of blood, also, and intimacy in childhood and youth, and a certain detachedness in later life have been his fortunate guides. His patriotism is of the pawky, discriminating kind which lends insight. The pictures, too, are good and suggestive, if not too closely viewed. Their limitations are those of the color process, and for magic mists and transparent rays color processes have no spell. The light that never was, on sea or land, perhaps neighbors closest to Scottish hills and seas, purple or gray, but it no mo-

chanical art can reach. Yet Mr. Palmer has done much, and the printer has done his best; and the results, for suggestion or memories, will stand for much more than they are in themselves.

Those who plan to live in the country are nowadays in danger of being distracted by the multitude of advisers. Mr. E. P. Powell, however, is no mere amateur, and his book, 'The Country Home' (McClure, Phillips & Co.), is full of practical suggestions drawn from a long and successful experience in horticulture. He has much to say concerning the selection of a site, water supply, and drainage, buildings, roads, etc., and adds a frequent dose of sentiment, which is wholesome and genuine, even if not always far above the prosaic. The very full lists of meritorious trees, shrubs, fruits, vegetables, and flowers should be found of value by every one who cares for a garden, as Mr. Powell appears to have tested whatever he recommends. The book is pleasantly illustrated, and is in every way creditable to the publishers.

To such of our readers as may desire a brief survey of Goethe's literary activity we can with safety commend H. G. Atkins's 'Johann Wolfgang Goethe' (London: Methuen), in the series of "Little Biographies." The get-up of it is charming; the paper is light but opaque, and the print is a delight to the eye. The author's style, also, is appropriate; lucid, direct, unaffected, it does not divert the reader's attention from the subject. It is almost austere in its dignified simplicity; still, it is by no means dull. Of course, one should not expect even an epitome of the real Goethe in 170 pages; what one gets here is merely a rapid glance at Goethe the author. Of Goethe's influence in finance and politics, in art, science, and philosophy, scarcely a word. Yet this side of Goethe is the one which now attracts most attention in his own country. The German, to whom "Werther," 'Meister,' and "Faust" are well-worn themes, wishes to know more of Goethe the myriad-minded man. Perhaps some German *Goetheaner* will succeed before long in digesting the now undigested mass of the "Jahrbuch" and countless monographs, and laying bare the springs of action of which Goethe's poetry was but one manifestation. Meanwhile, the English reader can profit by the present volume. It is accurate in what it gives, readable and healthful in tone, and well proportioned. We regret that the author speaks (p. 93) of Goethe as a "journalist"; his papers in *Der Frankfurter Gelehrte Anzeiger* were no more "journalism" than were Addison's papers in the *Spectator*. Goethe cared even less than Addison for the day's doings.

To do anything like justice to Mr. William H. Winch's 'Notes on German Schools' (Longmans), the reviewer should have at his disposal the columns of a *Fachzeitschrift*. We in this place must be content with noting the author's painstaking method and his sobriety of tone. The reader cannot but feel that the author has tried honestly to apprehend the salient facts of a complicated system and to present them clearly. In general, the schools here discussed are those below the Gymnasium, and correspond in the main to our New York "grades." In certain studies, however, such as algebra, geometry, and foreign languages, the work overlaps that of our high school. In foreign languages, especially, it is much more thorough and rational. The whole question of language-instruction has evidently a strong interest for the author. We quote from the Introduction (p. 5): "How often, for example, one reads an account of the teaching of foreign languages in Germany which leads us to think that grammatical teaching is dead, that exercise writing is abolished, that no translation is permitted, and that oral instruction by the direct method is the only one in favor with the best teachers. The detailed lessons which I give form a needful corrective to such notions." And, again, we would call attention to the remarks upon the character of the German teacher, upon the study of grammar, upon the "old" and the "new" method (pp. 197-202). Altogether, the book is rich in food for thought.

If Winch's book is in the main a collocation of facts and data, with at most a passing judgment by the author, Bagster-Collins's 'The Teaching of German in Secondary Schools' (Macmillan) is doctrine from start to finish. The book undertakes to show how German may be taught to the best advantage in the American school. Here, too, the reviewer should have the space of a *Fachgelehrter* addressing his *Collegen*. We, in our more restricted sphere, can only testify that the book is well planned and well written. The author inclines to the "new" method of teaching, without going to the extreme in his inclination; his doctrine is always mindful of American conditions and limitations. In substance, the book is a response to the Report of the Committee of Twelve, 1898. We are not disposed to take issue with the author, even where he seems to have entered upon debatable ground; for his opinions are at least matured, and, after all, the field is open to every form of illuminating discussion. Only upon one point do we venture upon a general dissent. "Learning to speak is a complex process, compared with learning to read" (p. 20); "translating and reading a language are two different processes, for a pupil may read a language almost as his mother-tongue, and yet flounder hopelessly if you ask him to translate at sight" (p. 199). Both these utterances are true, yet they are far from giving the whole truth. In view of the circumstance that Columbia publications now abound in psychology, we would ask what is the psychology underlying this whole business? Is it definitively psychological to say that speaking one's own commonplaces is more "complex" than reading the pregnant utterances of another? Does not the fundamental difficulty in translating lie in the need of adjusting one's own mentality to the mentality of the original? If that is the case, we can scarcely admit that the American who reads his Goethe "almost" as English truly understands his Goethe. The chapter on Pronunciation is vigorous and wholly up to date.

The Jefferson letters, in the seventh volume of the Buffalo Historical Society's Publications, are likely to attract general attention. They are fourteen in number, eight of which appear to be now printed for the first time. They were written to Francis Adrian van der Kemp (1752-1829), a Dutch clergyman, publicist and reformer, living at Olden Barneveld, New York, later Trenton. All of them possess the true Jeffersonian flavor. An extract from one dated April 25, 1816, is just now gaining wide currency, for the reason that it has been quoted by Dr. Cyrus Adler in his admirable Introduction to the so-called "Jefferson Bible," which Congress in handsome style is distributing through the country. Whoever examines the full text will be inclined to think that what the writer of the Introduction does not print has been judiciously omitted. Gen. Henry A. S. Dearborn's letters in the same volume are more or less valuable. The Life of Augustus Porter is likewise of general interest. This able pioneer of the Niagara region has left his mark in the history of western New York. The name of Porter is associated with Niagara Falls as closely as is that of Irving with the Hudson. Judge Porter's own narrative, written in 1848, possesses much of the charm that attends the plain, simple talk of a man of action who tells in his own way the story of his experiences. The early annals of Buffalo, it is evident, are well cared for. This well-printed volume is a credit to the Society and to the editor. It has several illustrations, mostly portraits; and the index of names appears to be full.

Under the title, "A Doubtful Island of the Pacific," Mr. James D. Hague gives an account, in the *National Geographic Magazine* for December, of the various attempts to discover an island or group of islands reported to lie about midway between Hawaii and Panama. The unexplored region in question consists of some 40,000 square miles, of which 10,000 have been carefully searched by the *Albatross* in 1899 and the *Tacoma* in May, 1904, without finding any trace of land. A special interest in the investigation is the possibility that the United States sloop-of-war *Levant*, which sailed from Hilo for Panama, September 18, 1860, may have been wrecked on some unknown island, and that some of her crew may still survive. It was on this ill-fated vessel that the hero of 'The Man without a Country' ended his romantic career, and Mr. Hague closes with this characteristic note from Dr. E. E. Hale, which he found awaiting him on his landing from the *Tacoma:* "If you have found dear Phil Nolan, bring him at once to this house; I will adopt him as my grandfather." Among the other contents are an address on China by the Hon. John W. Foster, and an abstract of the report of General Greely, Chief Signal Officer. Of the Alaskan telegraph system he says: "The entire construction of 3,625 miles includes not only 2,079 miles of cable and 1,546 miles of land lines, but also a wireless system of 107 miles" between Cape Nome and Fort St. Michael. This "perfects the military intercommunicating system of the United States." Every important military command, except the legation guard at Pekin, can now be reached over strictly American lines of telegraph and cable.

A conviction of the strategic importance of the republics of Hayti and Santo Domingo, lying in the path of the great stream of commercial traffic which will flow through the Panama Canal, has led the London *Times* to send a correspondent to the island to study its conditions with a view to the question of its political future. The results of his experiences in Hayti are given in a recent communication (December 7), which may be summed up in the assertion that

"the great bulk of the people . . . subsist on a social and economic basis but slightly higher than that of Africa." "In theory republican, the government is a system of arbitrary force, unregulated and unmodified by any consideration save that of individual self-interest and toleration. Martial law is the normal condition in the republic; the military are predominant; officers, soldiers, and police are the most conspicuous element everywhere. The houses of the ministers are guarded; they themselves go about armed with revolvers, and all night long the towns echo to the challenging of guards." Hayti's independence as a negro State is the fundamental principle on which its existence is based. "When President Nord Alexis was questioned by the writer on the subject, and the possibilities for Hayti involved in American intervention in Santo Domingo were pointed out, he replied that his race had fought for independence, and would die to a man before it was given up." Trade and banking business are almost entirely in the hands of Germans, though the bulk of the exports go to Havre, the greater proportion of the imports coming from the United States. The normal relations between the natives and foreigners—a few hundreds only in number—are on the surface friendly; but in times of economic and political crises "the atmosphere is electric with fear and uncertainty, a massacre of the whites often being spoken of and always being possible."

Under the auspices of the Verein der Deutschen Ingenieure, a special commission of German scholars has been appointed to coöperate in the unification of the orthography of foreign scientific and technical words. At a recent convention held in Berlin, the principles upon which this uniform spelling is to be based were practically agreed upon; the various philological societies and the Governments to act further in the matter. The meeting, which was largely attended by specialists in the technological departments, could not quite agree whether the new system should be based on the international scientific orthography (*e. g., calciniren*), or on the popular system (*kalziniren*), or whether both systems might be followed to a certain degree. A list of the words concerned is to be prepared and sent to the different specialists for further study. None are more interested in this matter than the editors and publishers of the great Technological Lexicon now in preparation under the auspices of the above society, with Dr. Jansen as manager.

The Schiller Gedächtniss-Stiftung, an association that purposes to supplant the trashy literature of the day by publishing cheap editions of the best writers, reports that, during the present year, it has distributed gratis more than 10,000 copies of good books to poor libraries in Germany, Austria, and Switzerland, and that it is prepared to distribute 15,000 during the coming twelvemonth. It appeals for membership fees of three marks and other help, to be sent to its headquarters in Hamburg.

In an address delivered by the retiring rector of the University of Leipzig, Prof. Dr. Bücher, some new facts were given in reference to the proposal to assess a special tax on foreign students attending the universities and the technological institutes of the Fatherland, this movement being one of the outcroppings of the anti-foreign spirit which has been making itself felt of late to a noteworthy degree in the academic world of the Empire. The project was even discussed in the Reichstag, and there found some favor. A conference of rectors was held in Leipzig, which decided to throw its influence against the proposed innovation, on the ground that such an extra tax could not be justified, seeing that the presence of foreigners does not increase the expenses of these schools. Bücher declares that, to his knowledge, none of the German State Governments show any inclination to put this additional burden on students from abroad.

—Houghton, Mifflin & Co. complete their centenary edition of Emerson's works by the simultaneous publication of three volumes, 'Lectures and Biographical Sketches,' 'Miscellanies,' and 'Natural History of Intellect, and Other Papers.' Dr. Emerson's taste and skill in editing and annotating this edition of his father's writings have held out bravely to the end. Indeed, these qualities have been less conspicuous in the former volumes. Perhaps the truer word would be that the biographical and local sketches, especially those dealing with Concord subjects, are more fertile in suggestion and reminiscence for the editor than those of a more abstract character. Emerson's "Historical Discourse at Concord" has seemed to many so perfect of its kind that there could be no addition or subtraction without harm, but Dr. Emerson's notes to this address are uncommonly rich. So are those to the short papers on Dr. Ripley and Mary Moody Emerson. There are no additions to the body of the 'Lectures and Biographical Sketches' as compared with this volume in the Riverside edition, but to the 'Miscellanies' of that edition we have here some notable additions. They include a most noble letter written to President Van Buren in 1838 on the removal of the Cherokee Indians from Georgia, and a Concord speech on the Fugitive Slave law, after its enactment. The Shakspere speech at the Boston Saturday Club has an amusing history. Emerson's endorsement on the manuscript was to the effect that the speech was delivered at the Revere House April 23, 1864. Mr. Cabot's recollection is that Emerson made no speech, but a dead funk, remaining, however, serene and unabashed, though unable to say a word. Emerson's interview with Lincoln, recently published in the *Atlantic*, is not published with the notes on his Lincoln speech, but reserved for a later publication of certain selections from Emerson's journals.

—The twelfth volume is much richer than the corresponding volume in the Riverside edition. It contains five new lectures, two of which, "Country Life" and "Concord Walks," are in Emerson's most pleasing vein, and their inclusion with the other three is quite as much in order as that of many other things for the publication of which Emerson's former editor, Mr. J. E. Cabot, was responsible in the volume which he edited on their original publication. The sections added to the "Natural History of Intellect" are interesting and valuable, but, like the narrower inclusion, are convincing that Emerson had little faculty for a systematic presentation of his philosophic thought. Much interesting light is thrown on the methods of Emerson's work. His transference of matter from one lecture or essay to another was apparently habitual, and the final or secondary setting was seldom an improvement on the first. A general index to the twelve volumes covers 125 pages. It is remarkably full and appears to be exceedingly well done. In its present form it is the work of Miss Laura Woolsey Lord.

—Volumes xvii., xviii., and xix. of 'The Philippine Islands, 1493-1898' (Cleveland: Arthur H. Clark Co.) bring the record forward from 1609 to 1621. It was a period notable, in the matter of striking events, for the continual struggles with the Dutch in the Orient, not only at the very entrance of Manila Bay, but especially in the Moluccas and to some extent in Japan, then soon to be almost completely shut up to Europe again. These volumes naturally bring forth various documents bearing on these conflicts, as well as documents for the years 1619-1621, touching the proposal to abandon the Philippines because of the costliness of the foothold maintained by Spain in the Orient at a time when Philip III. and his resources were sadly strained at home. It is a favorite assertion of historians given to the picturesque that Philip III. held to the Philippines, cost what they might, solely because of his desire to christianize their people. That the friars' arguments availed greatly with him is certain, but it is plain from the record that the hope of empire, and the shame of abandoning it in the face of reversals, were motives that played at least as great a part. These three volumes, however, deal rather with the more significant matters of internal government of the Philippines than with the striking events of buccaneer warfare.

—The documents are mostly drawn from the original manuscripts, especially from the archives of Seville, as will necessarily continue to be the case throughout the series. The letters from Jesuits are of prime value, and also deal considerably with China, Japan, and India. A reprint of Hernando de los Rios Coronel's memorial on faults of administration and abuses of the natives in the Philippines, first published at Madrid in 1621, is also notable. The various documents mostly shed some light on the drain upon Philippine resources, and still more the impoverishment and abuse of the Filipinos resultant upon the equipment of ships to fight the Dutch among the Spice Islands. The editors have performed good service by interposing selections from the Laws of the Indies, the other documents revealing by comparison how far these humane provisions came from successful enforcement. Volume xvii. has a valuable appendix in the form of a list of the various governors of the archipelago from beginning to end of Spanish rule, the most correct and serviceable yet compiled in English, with abstracts from Sinibaldo de Mas (1843) and Montero y Vidal (1866) on the methods and machinery of Spanish administration. Compare with these the abstract of Spanish government in the first volume of the Report of the Philippine Commission (Schurman) of 1900 (the fault of which abstract was that it was mostly confined to the provisions of administrative reforms but recently enacted), and the student will have a very good working knowledge of Spanish administration. It is regrettable to hear that this

series has received most scanty support in the United States, even from libraries, though this is only another evidence of the lack of any serious effort worth mentioning as yet in the study of Philippine history and affairs in our country. The publishers of the series have been compelled to announce that, beginning with February next, they will limit the number of volumes printed strictly to the number subscribed.

—Mr. William Macbeth, the picture-dealer, publishes a thin volume of less than sixty pages, 'Homer Martin: A Reminiscence,' by the painter's widow. The book is well and simply, if not quite frankly, written, and has a distinct charm of its own, while it does, in the words of its publisher, afford "valuable insight into the life and work of this highly gifted artist." As is inevitable, however, the insight given is rather into the causes of the artist's weaknesses and partial failure than into the sources of his strength. No one has ever been able to explain genius or even talent; it is possible to show, in some degree, why genius or talent did not find fuller fruition. The causes of Martin's shortcomings as a painter seem to have been an almost total lack of systematic training, a temperamental inability to work except when in the mood, a defective vision culminating in almost entire blindness, and certain "habits" and "propensities" which are hinted at but not named. Against each of these handicaps artists have victoriously contended—against all of them together no one could quite victoriously contend. Mrs. Martin quotes George H. Boughton to the effect that if Martin had been a pupil of Corot's he "could hardly paint more like him"—and in charm of tone and of delicate light and color there is indeed a marked similarity between the works of the two painters; but of the breadth of design and of the suave perfection of a personal but masterly technique which marked the great Frenchman, there is little trace in the work of the American. Of what he was we have learned to be justly proud; to understand may be to pardon, but need not be to forget what he was not.

—There are not many philosophers, as distinguished from the professors of philosophy, but the late Thomas Davidson was of the number. He deliberately chose the vocation of a sophist, to use the term as explained by Grote, and refused to attach himself to any scholastic corporation. He took money for his teaching from those who could afford it, but gave counsel freely to the poor. An account of the results of a few lectures which he delivered on the East Side of New York has now been prepared by Mr. Charles M. Bakewell, and published by Ginn & Co. under the title, 'The Education of the Wage-Earners.' Incredible as it may seem, Davidson aroused in a gathering of people nearly all whose waking hours were devoted to manual toil, an enduring interest in books and subjects which are quite beyond the capacity of most of the "leisure class." He set them a stiff course, but they proved themselves equal to it, and have continued the movement with wonderful courage. What is even more remarkable, Davidson at the outset persuaded many of his hearers, who knew no hope but that offered by Socialism, that there was a higher ideal. Socialism, he showed, involved the loss of the very thing for which the State exists—personal liberty. To preserve liberty and at the same time secure opportunity for self-development, implies the existence of the conditions that would make Socialism possible. In other words, society will be reformed when the people who compose it become elevated, morally and spiritually; and without this elevation no changes in government or in material wealth will make the world better. Mr. Bakewell is to be commended for calling attention to this remarkable experiment and its present results; and his account of Davidson and his philosophy should perpetuate the memory of a man who labored sincerely and successfully to bring light into the lives of his fellows.

—The latest lists of books and articles on special subjects issued by the Library of Congress, as prepared under the direction of the chief bibliographer, Mr. Griffin, draw fresh attention to the defective bibliographical workmanship of this series. We have never been able to understand why books, articles in periodicals, and Government documents are listed separately, nor why the books are arranged alphabetically while in all the other divisions the titles are arranged chronologically, nor why the alphabetical index to authors should cover the similarly arranged list of books. The absence of topical indexes is a serious blemish. The distinction between the divisions is not always kept in mind by the compiler. In the list on Immigration, for instance, several articles in periodicals and in Congressional documents are listed as if books, and at least one, John P. Altgeld's 'The Immigrant's Answer,' is given both under articles in periodicals—it was first printed in the *Forum* for 1890—and as a "book," because it was afterwards reprinted in the author's collection of essays called 'Live Questions.' In the list on the Far East a number of book-titles are accompanied by descriptive or commendatory quotations, but the sources are not always indicated. Each of the lists mentioned is prefaced by a note describing the material and repeating a number of the titles, with an occasional word or two of evaluation; too many titles are given to be of any value as guides, and the evaluation is haphazard. What is here said of the lists just issued is true of nearly all of the publications of the Division of Bibliography; their standard is not what one has a right to expect from publications emanating from the National Library.

—Magnus, who is well known for his researches in the history of the treatment of diseases of the eye ('Die Augenheilkunde der Alten,' Breslau, 1901), discusses with much acuteness in a late number of the *Deutsche Medizinische Wochenschrift* the paragraphs which concern this subject in the lately discovered laws of Hammurabi. Hitherto we have had no knowledge of operations upon the eye of an earlier date than the time of Hippocrates, and even at that time nothing was ventured upon except the removal of tumors from the lid and the cornea; there is no record of anything having been attempted in the interior of the eye. But now we suddenly find that the book of the laws of the Babylonian King makes express provision for regulating the relation between physician and patient in the case of operation for cataract. Cataract is a result of defective nutrition of the lens, and is not so much a disease as a too common physiological occurrence in advancing years. To undertake to push aside the clouded lens at a time when of course aseptic measures were unknown, must have demanded an extraordinary amount both of courage and of skill. Magnus comes to the conclusion that the passages concerning this subject in the book of the laws must be interpreted as meaning that for a successful operation the oculist shall receive ten silver shekels (something like ten marks); but that, if the patient dies under the operation or if his eye is destroyed, the hands of the operator shall be cut off.

THE RECENT HISTORY OF THE SOUTH AMERICAN REPUBLICS.

A History of South America, 1854-1904. By Charles Edmond Akers. With illustrations. E. P. Dutton & Co. 1904.

It is surprising, when one considers the size of the South American States, and the importance which some of them are acquiring, that so little has been written about them, either by way of describing their economic and social condition or as a record of their history. Americans, Englishmen, and Germans seem to have found them either too uninteresting or too troublesome and perplexing an object of study, so that until now it has been hard to discover any trustworthy account of the political phenomena which distinguish these republics from the rest of the world. Mr. Akers had accordingly every justification for attempting a condensed account of the recent history of South America such as his volume presents. He takes up in succession each South American country, Argentina, Paraguay, Uruguay, Brazil, Chile, Peru, Bolivia, Ecuador, Colombia, Venezuela, treating the four last named very curtly, and the others more at length. Two chapters give a rather too sketchy general introduction, four in the middle are devoted to an account of the war between Chile and Peru, while a concluding one reviews the general situation, and intimates views of the future.

The plan is good, and the execution not unworthy of the plan. Although the author tells us that he is a journalist by profession, who has resided for fourteen years in South America, there is nothing in his style characteristic of either the newspaper correspondent or of the leading-article writer. He is plain, concise, businesslike, using no rhetoric, spreading himself out with no vague amplifications. He does not profess to write as a philosopher, examining the causes of the political phenomena which he describes, nor does he make any reference, by way of illustration, to the political phenomena of other governments in other countries which offer parallels to the history of these republics. But he writes sensibly and temperately, making on his reader at least the impression of a man who deserves confidence. The book is one not meant to charm those who read for entertainment, but addresses itself to persons who desire to be informed regarding the recent history and present state of a vast continent which must play in the future a larger part than it has played in the past. Such persons will find in its pages most of the facts they need; there is, indeed, so far as we know,

no other book which contains the facts in so convenient a form.

We say "most of the facts" because, in the case of some of the countries dealt with, there are omissions which one would gladly see supplied. Among these omissions, one relates to the quality of the population. As respects some States, Peru, for instance, and Bolivia, and Venezuela, Mr. Akers gives figures, sometimes unofficial figures, but the best he could get—probably official figures are no better than others—of the respective numbers of Spaniards, half-breeds, and Indians. But in the case of some other States he is apparently unable to provide any estimate of the relative strength of the various elements in the population; and generally he is perhaps rather too curt or two meagre in his notices of this point, essential as it is to a comprehension of the social conditions out of which political disturbances spring. Broadly speaking, the causes of these disturbances, which have not only given South America a bad name, but have done something to discredit republican government itself in the eyes of unthinking persons, stand out pretty clearly from his pages. Upon one of them he seems to us to lay undue stress, viz., the Spanish or Portuguese origin of the European part of the population. There is no reason in the nature of things why Spaniards should not be able to work a free government. In the fifteenth century both Castile and Aragon had constitutions which gave promise of development, though an unhappy series of historical events destroyed that promise. It is more material to observe that the Spaniards in the New World never had any chance of learning self-government. They were comparatively few, scattered in tiny communities among subject races, and they were despotically governed by viceroys sent from Spain. No local institutions existed among them like those planted from the first in the English colonies in North America. Thus, when they shook themselves loose from the mother country in the beginning of the nineteenth century, they were utterly inexperienced in politics, and had nothing to guide them except fine phrases and the Constitution of the United States, which, it may safely be said, few of them understood, and which was not well suited to their very different conditions. Probably the best thing for them would have been a strong, even an autocratic, government, which would have imposed order, prevented insurrections, opened up the country, and given a chance for wealth to grow by the development of agriculture and other industries.

They had against them, besides their unlucky start, the misfortune of being far too few for the territory they occupied, and of having territories in which there already existed native races so far back in civilization as to be unfit for any kind of free government, and indisposed, in many regions, to regular industry. Most of South America was too hot to be cultivated by the labor of the European settlers, and they seldom attempted to work the mines themselves, preferring to employ Indians, as in Peru, or negroes, as in Brazil. Thus the white population increased very slowly, and it continued to be thinly dispersed over a wide area. According to Mr. Akers's figures, three-fourths of the population of Peru, for instance, is Indian, while most of the remainder is of mixed race; Bolivia has only 250,000 whites, as against 1,250,000 Indians, one-fifth of whom are entirely uncivilized, and 500,000 half-breeds; while in Ecuador the Spanish element is only 7 per cent. of the total population, and the number of inhabitants to the square mile is only 1.5. In Chile it is about 9; in Bolivia about 3.5. Through foreign and civil wars, Peru is believed to have now only about half the inhabitants she had in 1876. It is partly a cause and partly a consequence of these physical and social conditions that culture and education have remained at a low level. Even the elements of culture are confined to the European element, and in most States to a small minority of that element. Lying far from Europe and from the United States, these countries have felt only slightly those impulses to progress which have worked powerfully upon civilized peoples.

One fruit of civilization, however, they have reaped, viz., the possession of modern military weapons. They have been engaged in almost constant wars. Some of them have, like Paraguay, been chiefly occupied in foreign strife; some, like Ecuador, Uruguay, and Columbia, in intestine; some, like Chile and Peru, in both. They have raised in Europe large loans for the purpose of buying arms, ammunition, and iron-clad vessels; and have in many cases made default in payment of interest on these loans. The fate of an insurrection has usually been decided less by the valor or cowardice of the combatants—and these Spanish Americans often show considerable valor—than by the supply of ammunition which one or other of the contending parties possesses. Scarcely any of them seems to have advanced far enough to be able to manufacture its own guns; none certainly can build its own ironclads or make its own torpedoes. The sums expended in the great war of Chile against Peru and Bolivia and by the two factions in Chile, in the struggle caused by the ambition of Balmaceda when he tried to establish a dictatorship, would have been sufficient to provide these three countries with the railways and roads which they now so greatly need.

Of all the republics described by Mr. Akers, Ecuador, Venezuela, and Colombia seem to be at present the most backward and barbarous, and Brazil that in which the white population, no doubt much mixed with negro blood, has sunk to the lowest moral level. What he says of Colombia seems to be equally true of several other States:

"The present-day insurgents of Colombia are not far removed from brigands, and the political character given to revolutions is generally a cloak to cover illegal forms of pillage and rapine. It is from such elements that political adventurers of one or other party factions, striving to control the administration, draw elements for armed revolt against the authorities; and the rank and file of the men who enter the contest know little and care less about the merits of the cause. It is convenient for them to maintain the fiction that they are engaged in this or that struggle from patriotic motives, rather than be classified as robbers and outlaws, and this spirit makes armed insurrection easy in Colombia. Nor does any punishment follow an unsuccesstul rebellion. Property is seldom confiscated, treason is rarely made an offence demanding severe castigation, participation in seditious conspiracies entails no loss of civic rights; this immunity being probably due to the fact that the individual privileges of citizens are so mythical as to be thought little of where respect for law and order is practically unknown. In this part of South America the general conditions more closely resemble the early Middle Ages in Europe than anything in modern civilization; the injured must seek redress by the sword, or bear without remonstrance all indignities heaped upon them" (p. 602).

In one State at least it is expressly provided that people are not to be punished for taking part in insurrections, the notion in fact being that insurrection is a regular part of the machinery of public life, which may as well be recognized. It is needless to say that the Government actually in power at any given moment has no moral presumption in its favor. It is the child of revolution, and a revolution to overthrow it is therefore just as likely to have good grounds as had the revolution which installed it. Similarly, the constitutions of some Central American States provide that the force and validity of a constitution shall not be affected by the fact that a revolution has occurred: It is to go on without needing to be reënacted. Revolution is part of the normal machinery of politics.

One feature seems to be common to all these States, the want of honor and purity in the judiciary. Of Peru, Mr. Akers writes (p. 536):

"The administration of justice in Peru could not be more unsatisfactory than it is, and to designate as justice the manner in which the laws are administered is to convey an erroneous impression. To obtain a favorable verdict, bribery must be practised; and it is a question of who has the longest purse when a decision is reached. To this widely sweeping assertion there are no exceptions, the Supreme Court being no cleaner than the lower tribunals: it differs only in that payment must be on a higher scale. An example of the existing conditions occurred recently, when an important suit involving 250,000 gold dollars was pending in the Supreme Court. On the bench were five judges, and the evidence on one side was clear and concise, leaving no doubt of the rights of the case. A few days before judgment was delivered, the principal litigant received information that an adverse verdict would be given unless a bribe was forthcoming, and, not having the necessary funds, he applied to a banker for an advance of 10,000 gold dollars to buy a third vote, explaining that he had secured two others. The loan was obtained, and, after a favorable judgment was pronounced, the 10,000 dollars were paid to the member casting the deciding vote. In this case a just verdict was bought, but it happens quite as often that injustice is obtained by similar means.

"The judicial officials are, as a rule, too ignorant to turn to best use the legal power entrusted to them. They are so inadequately remunerated that they are tempted to corrupt practices at every turn, and it is due to these circumstances that blackmailing has become so common. No redress can be obtained as affairs are conducted to-day, and the most hopeless feature of the situation is that the ordinary citizen does not appreciate the necessity for an impartial administration of justice. He has a vague idea that there are such persons as honest judges in other parts of the world, but he is not sure that an upright judiciary in Peru would be an unmitigated blessing."

Under such conditions, it does not surprise us to be told that elections are hardly ever, if ever, honestly conducted. There does not seem to be a single South American State in which the courts can be trusted, though they are not everywhere quite so bad as in Peru; and there is hardly a State in which Governmental influence may

not be expected to manipulate the elections so as to secure a majority for its own candidates. This is another reason why Presidents and governments lack moral authority. Even if they have not secured their power by force, they have probably secured it by fraud, so insurrection becomes the natural expedient of the unsuccessful party.

Nevertheless, it would be an error to assume that all these republics stand equally low, or that signs of improvement are wholly wanting. Chile has generally borne a good character in the financial world for the discharge of pecuniary obligations, and her people, less mixed with native Indians or with negroes than those of the other republics, have shown more capacity than any others for working Constitutional government. Mr. Akers, however, takes a sombre view of the present condition of that country. Her success in war, while it has made her people blustering and aggressive, has turned them away from agricultural industry, which is now declining. Brigandage is rife, and the mass of the population are wretchedly poor. Argentina shows more distinct signs of progress. No country suffered under a more brutal tyranny than she did under Rosas, who was overthrown and expelled in 1852. But since the election of President Sarmiento in 1868 there has been an unmistakable upward movement, often interrupted, but subsequently resumed. This is largely due to the vast immigration into the country of Italians and of colonists, mostly Basques from Old Spain, to the construction of railways and the development of agriculture, and to the influence exerted by the European capitalists and merchants who have acquired interests in Argentina or do business there. Of late years the material growth of the country has been rapid. It now exports immense quantities of grain, hides, meat, and wool. The population, which was in 1869 only 1,800,000, has now risen to more than 4,000,000; yet even this number gives only about 3.5 persons to the square mile, so the field for further settlement is still very wide. The people seem to be somewhat more enlightened than in the Pacific States, and the Roman Catholic Church is not so powerful a factor in politics as it is in Peru, Ecuador, and Colombia. The temperate climate of Argentina and Chile has been much to their benefit—in the former by attracting European immigrants, in the latter by enabling a peasantry of European stock to pursue agriculture and other industries without depending upon Indian or negro labor. The presence of the negro is a serious factor in Brazil, for, of the 14,500,000 inhabitants, only 5,000,000 are whites, and even among these the infusion of negro blood has been sufficient to affect the character of the white race, there being among the Portuguese no such aversion to intermarriage with colored people as the Teutonic nations evince. Elsewhere the black population is relatively small.

Despite the improvement visible in Argentina and the great possibilities of economic development which the minerals of Bolivia, Peru, and Chile hold out, the impression left by Mr. Akers's review of the existing conditions of the South American States is anything but cheerful. It would almost seem as if the impulse towards progress must come from without to all these mixed races, for except in Chile and parts of Argentina there appear to be comparatively few pure Spaniards. European immigration or the influence of European capital, since direct control by any foreign power is for the present improbable, seems likely to prove the most stimulative influence. This influence might most easily come from the United States, but Mr. Akers thinks (p. 601, p. 655) that recent occurrences at Panama have alarmed the Spanish republics, and for the moment checked their disposition to look to Washington for encouragement and guidance. It is to be hoped that this will prove a passing sentiment, for the United States could do more for Northern South America than can any other people.

In closing we may specify a few shortcomings in Mr. Akers's survey. The two pages dedicated to the brief revolutionary disturbance of 1898-99 in Bolivia might well have been omitted. The statement (p. 533) that alcoholism threatens to bring about the depopulation of Peru evinces a pardonable want of acquaintance with the Peruvian people as a whole. Those of the coast are not at all addicted to drunkenness; in the highlands, the Indians are repulsive inebriates, and were more so before the Conquest, and our author should have made a marked distinction on this point. That Mr. Alfred St. John, British Consul at Callao, should have "arranged a suspension of hostilities" between the forces of Cáceres and Piérola on March 19, 1895, will be news to those who know something about events that terminated the civil war in 1894-95 in Peru. There was a British *Minister* at Lima *at the time*. The suspension of hostilities was due to the personal efforts of the Papal Delegate, Mgr. Giuseppe Macchi, with the backing, of course, of such other members of the diplomatic corps as were then at Lima.

WENDELL'S SEVENTEENTH-CENTURY LITERATURE.

The Temper of the Seventeenth Century in English Literature. By Barrett Wendell. Charles Scribner's Sons. 1904.

In this volume, which contains the Clark lectures given by Mr. Wendell at Trinity College, Cambridge, a tactful humor is displayed alike in the choice of a subject and in the handling of it. By the terms of the bequest, a lecturer upon this foundation is constrained to select for his course some period of English literature. Mr. Wendell, as readers of that most suggestive and unconvincing book, his 'Literary History of America,' know, has one pet particular thesis—the notion that Elizabethan literature in England was "spontaneous, enthusiastic, and versatile," that America and American literature take their origins in Elizabethan England, and that, while the temper of English writing has changed vastly since the parting of the ways, American literature has shown spontaneity, enthusiasm, and versatility to the end. He therefore chose for consideration with his British audience that period of English literature in which its modern British mood came into being, and so, implicitly and by indirection, endeavored to expound and justify American letters in "the Old Home."

The strength of Mr. Wendell's method is more, and the weakness of it less, apparent here than in the earlier work. That method is, in brief, intuition, deduction, iteration. There the intuition was but of a half-truth, the deduction not always sustained by fact, and the iteration sometimes cloying; here the case is rather different. No one will deny that Elizabethan life *was* "integral," and its expression in literature "spontaneous, enthusiastic, and versatile" in a sense that English life and expression were not in Jacobean or Caroline days, so that here Mr. Wendell's intuition is unquestionably correct. It chances, furthermore, that the path to be followed in deducing the growth of the conservative "John Bull" temper from English literature of the seventeenth century had been ably blazed by Mr. Dowden in his 'Anglican and Puritan,' by Mr. Gosse (upon the more external side and with some false lights) in his 'From Shakespeare to Pope,' and by many other trailsmen. In his main line of deduction, then, Mr. Wendell is in touch with the best recent scholarship, though he shows an individuality of thought and an amount of the fundamental mind-work of criticism that is stimulating and provocative. Finally, though the old trick of iteration is still here, and we have an artificially close texture of style depending upon the numerous appearance of our old friends, "spontaneity," "enthusiasm," and "versatility" in all manner of adverbial and adjectival permutations and combinations, still the writing is relatively simple and sincere. We could, however, wish away certain disagreeable and unrelenting mannerisms like "so an end," "speed on," "the while."

Mr. Wendell's scholarship, too, is here seen to excellent advantage. It is, in the main, vernacular rather than cosmopolitan and comparative, and we think that his argument might have gained in cogency and truth at many points from the consideration of connected phenomena in the other literatures of Europe; but within its limits it is unassuming, fine and sound. He deals primarily, indeed almost wholly, with the chief and principal things in seventeenth-century writing. His concern is with "the most significant literature," which, as he defines it, is "that which the spontaneous selection of posterity has kept alive from generation to generation." Here, again, the argument might have gained in full and varied truth from a more minute knowledge of the minor men who go to give an age its color, yet whom posterity does not care to keep alive; but in that way, as Professor Masson showed us long ago, danger lies for the seventeenth-centuryist. With the significant literature that here chiefly concerns him, Mr. Wendell has a nice familiarity, and in the field of his special studies, as in the admirable chapter on Puritanism, he writes with specially informed judiciousness.

This is enough as to Mr. Wendell's occasion, method, and scholarship. The course of his inquiry is, briefly, this: the quality of Elizabethan literature being what we have seen it, what were the stages through which the temper of the century passed in the evolution of the English mind as we know it? After tracing the disintegration of the drama, the divergence and decadence of the schools of Spenser, Jonson and Donne, the growth of a deliberate and self-conscious prose, Mr. Wendell sums up the first half of his century as

"a period when the elder integral temper

—with its spontaneity, its enthusiasm and its versatility—swiftly disintegrated; a period, too, when this process of disintegration tended to produce writers who seem increasingly self-conscious, and consequently more and more deliberate; and that, so far as its later manifestations reach the lasting dignity of literature, they reach it not because they express, like Elizabethan literature, a comprehensive national temper, but rather because, more subtly than that elder literature, they express the individual experience of men, mostly given to ideal philosophy, who sought, or who were driven into, personal isolation."

This brings him down to the age of Puritanism and to Milton, the supreme example of the ideal philosophy as well as of the personal isolation characteristic of his age. The progress thence toward a reintegration of the national mood in the new "tenacious," practical temper of Dryden and his followers is easily traced in the single concluding chapter, which was all that the scheme of Mr. Wendell's occasions allowed him. No one who knows well the seventeenth century, with its wayward transitions, its bewilderingly multitudinous survivals of elder times, its inexhaustible fertility in the seeds of future growth, its deep and varied humanity, is likely to go all the way with so pretty a demonstration. It is too good to be quite true. It is, however, an uncommonly lucid and helpful summation of a very tangled and tenebrous matter.

Mr. Wendell's criticism of the separate authors within his province is necessarily partial and sometimes even *parti-pris*, being subordinated to the establishing of his thesis; yet we imagine that it is in certain of these passages that many readers will find him most satisfactory and memorable. As a critic Mr. Wendell is at best in dealing with literature as a fine-art, objectively yet very individually. Here again his method is one of intuition, of the sudden phrase-born illumination which may or may not coincide with the whole truth, rather than of cautious-footed induction. At times, however, this method reaches a felicity that approaches finality. Our space will not suffer us to quote what is perhaps the most convincing single passage in the book—that in which Mr. Wendell elucidates the notably visual bent of Ben Jonson's imagination, and proceeds to show very finely how Jonson's plays are, as many of us have felt, not dramatic, but *pictorial*. No better passage can be selected to show Mr. Wendell's quality as a critic than that in which, after quoting the familiar passage in 'Paradise Lost' describing Eden, beginning,

"Groves whose rich trees wept odorous gums and balms,"

he comments upon it thus:

"Try to visualize that landscape, and you will be more ingenious than I if you can make it take much other form than you may see in the background of some Bolognese picture of Diana and her nymphs. Fancy, if you can, some sculptured Miltonic Adam or Satan; and see whether the form is not strangely like those colossally distorted ones which the Italians made in Bernini's time and after. Try to translate Milton's Eve into terms of painting, and tell yourself truly whether you can make those terms differ much from the manner we now think decadently artificial on the canvases of Guido Reni or of the Caracci. When I said all this to the friend who chanced to be with me, he waxed a little warm, for he was accustomed to reverence Milton, and thought me almost blasphemous. Nothing could have been further from my purpose. What impressed me most was not that Milton thus showed how in life, like every other wholesome man, he was himself a man of the days when he walked the earth. It was rather that the grave, austere earnestness of his mastered purpose surged so supremely strong. Amid his century of artifice and of cultured affectation, he was thus able, without disdaining contemporary terms, to make a supremely noble poem. In reverent admiration of its nobility one no more stops to remark its artifices than one stops to remember its origins."

This, as Mr. Wendell concedes, is a kind of personal imaginative association that is not very closely allied to law-giving criticism. For ourselves, while we see Milton's Adam a majestic and clear-lined figure that no Bernini could ever have conceived, and Eve of an ivory and golden beauty that Guido Reni himself could not have compassed, we are as amply convinced by the analogy in landscape at the beginning of the paragraph as we are satisfied with the sound Miltonic appreciation at its end. It is this union of sensitiveness to qualify with ready and deep admiration for what is formally great in literature, rather than any trick of style, that makes Mr. Wendell's best passages so individual and telling.

In points of detail the book is, of course, of the most capable workmanship, though the finger of the devil that discomposes type is to be seen in several places, and there is at least one misquotation, on page 147, where Herrick is made to say,

"And *then*, Saint Ben, shalt be
Writ in my psalter."

FIVE NOVELS.

His Majesty's Sloop Diamond Rock. By H. S. Huntington. Boston: Houghton, Mifflin & Co.

The Wolverine. By Albert Lathrop Lawrence. Boston: Little, Brown & Co.

Diane. By Katharine Holland Brown. Doubleday, Page & Co.

Dialstone Lane. By W. W. Jacobs. Scribners.

Painted Shadows. By Richard Le Gallienne. Boston: Little, Brown & Co.

In the days when Britannia unquestionably ruled the wave, when the mariners of England really earned all the credit they have got in song and story, no little adventure more clearly proved their mettle than the occupation and defence of Diamond Rock, the rock that rises six hundred feet from the sea, guarding the port of Fort-de-France in the Island of Martinique. It is wonderful that the incident has so long escaped an army of scribblers running to and fro upon the earth nosing about for material, but it is also well, because many would certainly have done it hastily and badly, and few indeed so carefully as has Mr. Huntington. The explanation of such escape may possibly lie in the fact that the material is very hard to get at, for the life of Admiral Sir Samuel Hood, who commanded the Barbadoes squadron in 1803 has never been fully written, and to get his information and assimilate it so well Mr. Huntington must have had to do more reading and reflecting than running about. His personal familiarity with the scene of his story is shown in detail that could not be grasped by a hasty tripper.

Neither Admiral Hood nor any one known to history is the hero of 'His Majesty's Sloop Diamond Rock,' but Tommy Reeves, a midshipmite who entered the navy with the intention of doing great things, and who therfore got his share of the great things going in the early years of the nineteenth century. Tommy was pretty soon recognized as a boy of spirit and understanding, and when it was decided that Fort-de-France could not be effectively blockaded until Diamond Passage was commanded by guns placed on the Rock, he was of the small band chosen to scale its precipitous sides and plant the flag on the summit. From that moment he is marked as one born for action, thrilling, hazardous, and successful. The account of the establishment of guns and garrison on the Rock, and of its defence two years later and surrender to the French fleet when food and ammunition were exhausted, is excellent, both for description of the thing that was done and characterization of the men and boys who did it. It was an enterprise in which agile and audacious boys were particularly useful, and though Tommy's courage sometimes faltered, it never failed. As a popular hero he can hardly compete with the bad boys, the slangy boys, the cheap boys who pervade modern fiction, but no fellow-boy who reads his story will deny that he was a good fellow who well deserved his luck.

An ignorant or careless person may easily read the novel entitled 'The Wolverine' without receiving the faintest intimation of the significance of the title, but an attentive reader may learn that it is a descriptive or pet name for the State of Michigan. The events narrated take place in Detroit and thereabout, three-quarters of a century ago, before a tide of emigration flowing westward had absorbed the early French population and substituted customs and manners less pleasing and less picturesque than those of the descendants of La Mothe Cadillac and his little band of gentlemen adventurers. The author is full of information about the history of Michigan, and involves his lovers (a French girl and a New England youth) in squabbles over boundary delimitation, a negro insurrection, and a severe epidemic of cholera. Marie Beaucœur, his heroine, appears to have enjoyed a degree of liberty not often granted to the daughters of her people in the New World by a watchful paternal Church. She walked and talked, took "canoe rides," and waltzed flagrantly with strange young men. She even acted Rosalind in a performance given for a church charity and approved of by the parish priest. Such proceedings must have made a scandal in French society, and one wishes the author had told us what Father Richard's bishop said and did when its noise came to his ears. Our inference is that the author has drawn his French girl from a dimly lighted inner consciousness rather than from knowledge, general or particular. He is more successful with Perry North and his New England conscience, and in his case manages to suggest a soul's conflict. His book is a rather pathetic testimony to several kinds of inexperience, yet it does not exclude hope of better things in the future.

The French passion for ideas was perhaps never more heroically tested than by Étienne Cabet and several hundred of his compatriots when they crossed the sea in 1848 to found in America a commune—*Icarie*—which should convert into reality their

ecstatic vision of a free, equal, and united society. The experiment, like most similar ventures, was a failure; a more pitiful, ghastly failure than others because it was undertaken with higher purposes, higher hopes, higher courage, and a more comprehensive ignorance of practical difficulties to be confronted. The story of 'Diane' is the story of this Icarian community on the verge of collapse and dispersion, after it had failed in Texas, failed in New Orleans, and had struggled through a few years of feeble existence beneath the shadow of the deserted Mormon temple at Nauvoo on the Mississippi. Diane is a maiden of noble birth, especially dear to Étienne Cabet because his people had served and loved her people in the days of their greatness before the Revolution and through succeeding years of disaster and comparative obscurity. Diane's gratitude to Cabet and fidelity in the hour of his humiliation form the principal emotional interest of the tale. The author shows familiarity and sympathy with the fundamental theories of Cabet and his associates, and offers a fairly philosophical explanation, by illustration, of the reasons why such theories never work. It is only for an enthusiastic moment that man really loves his fellow-man and is willing to embrace him, to die for him, even to work for him. Inevitably, the emotion passes, invariably the natural man asserts himself, and smashes a society founded on the maxim: "Nothing for oneself; all for all." Before the end comes, shocking things happen—shocking morally and physically—and many hearts are broken. Diane sees the tragedy of Icaria through to its bitter end.

There may be historical authority for the shrine built in the forest by Cabet, where he secretly worships the Christian God, and for the passionate confession that Diane overhears. If there is, Cabet's sincerity is seriously impugned thereby; and if there is not, the author hurts her story by diverting sympathy and destroying compassion for an apparently good man overwhelmed by misfortune.

With the drama of Icaria is interwoven the opening scenes of another drama, conducted by another group of idealists. The opponents of negro slavery in 1856 were stirred to activity by the passing of the Fugitive Slave act, and the agents of the "Underground Railroad" in the Border States had their hands full. Some neighbors of the Icarians are devoted to freeing the slave, and Diane's lover forsakes his people and his heart's desire to stand by John Brown in Kansas. The author has probably wished to point a contrast between two ideals of liberty and two methods of realization. Two "causes," however, overweight one novel, with the result that interest is divided, and neither cause is, so to speak, worked for all it is worth. The author's constructive faculty is not strong, and she certainly doesn't know where to stop. A few paragraphs would suffice for all that ought to be told after Cabet's death in St. Louis. But there are passion and understanding in the tale, things that come by nature, things unto which technical knowledge may be added hereafter.

'Dialstone Lane' is in Mr. Jacobs's best manner. It is the story of three landsmen who set out to look for a hidden treasure buried on an island in the South Seas. There, on a sandy beach carefully mapped on a chart that has fallen into their hands, lies, as they have been assured, the skeleton of a Spanish adventurer, and beneath it a bag of precious stones worth half a million. The adventures of the trio, who are marooned by their crew, are humorous and improbable. But though the story depends for its main incident on this crazy expedition, it is not to be classed as a desperate tale of adventure. The reader is more interested in those who stay at home in Dialstone Lane. The Lane is the home of a retired sea captain named Bowers, who combines a talent for narrative with a remarkably picturesque imagination. Into the mingled yarn of his novel Mr. Jacobs has interwoven the love-story of the Captain's niece, the experiences of his man-of-all-work, Joseph, the ex-steward, and the manners and customs of a little country town, apparently in Suffolk, which lies far enough inland to attract a retired mariner, but not too remote from the influences of a neighboring seaport. The book is admirably illustrated by Mr. W. Owen.

'Painted Shadows' is the title of a collection of short stories and allegories by Mr. Le Gallienne. His heroes are, as usual, persons of artistic temperament who recite very poor sentimental verse which is not inspired by their wives. Mr. Le Gallienne is a master of the domestic-sensual style, and only the sheer unreality of his characters saves them from being completely offensive. Nearly all the stories turn on the sentimental histories of men and women born for each other in some mysterious sense that makes introduction (they always meet in drawing-rooms at evening receptions) seem an impertinence: "Fancy Mrs. Pottle thinking it necessary to introduce us," says the violinist to one of the heroines, a matron of forty, whom he invites to elope with him in "a chariot of fire." "It was Mrs. Williamson's, and no more august stage, that those higher Powers had chosen for our meeting-place," says another hero of the same type; "but . . . as some village stable is suddenly visited by angels to become forever a shrine for all the world, with a like significance I sometimes say to myself—'Mrs. Williamson's!'" The whole book is written in the hysterical style that the author mistakes for poetic prose. As we have seen in the passage quoted above, nothing is too sacred to be dragged in as an analogy for sentimental situations, and Mr. Le Gallienne's single idea of a sentimental situation is one in which a poet or artist finds his "inspiration" in the wife of another. It is a morbid mania with Mr. Le Gallienne, this idealization of sham passion and caprice, and it is not redeemed by a certain prettiness of expression which imposes on some of his readers as prose poetry: "The Rose was coming over the sea, and my heart wondered: Shall we ever meet? One of those mysterious voices of the soul which are deeper than reason whispered that nothing could prevent our meeting. . . . Yes! The Rose and I would surely meet. . . . No, if we were to meet at all, Fate, and not I, must arrange the meeting." There is not a page in the volume from which one could not select a passage equally mawkish.

Routine and Ideals. By Le Baron Russell Briggs. Boston: Houghton, Mifflin & Co. 1904.

The papers collected in this volume consist in part of college and school addresses, some of which have been published before. These, with the other essays, however, make what is substantially a new book. The author has added his "Mater Fortissima," the Cambridge Phi Beta Kappa poem of 1903, one of the successes of the dinner of that year.

Dean Briggs has covered so much ground that it is difficult to give in a few words the thesis of his little volume. He calls it in his preface a collection of sermons, or a single sermon, of which the twofold text is, "Be thou faithful unto death," and "Where there is no vision the people perish." But we doubt whether either the idea of fidelity or constancy or even routine exactly expresses what half his sermon has in view. Drill, discipline, the formation of habits—the importance of these is what he wishes to enforce. Mr. Briggs insists that one-half of education, probably the most necessary part, is the training of the will, which is attained only through this formation of habits got solely by self-denial, discipline, and drill, at the end of which the wise find routine their best servant. This view seems, of course, opposed to the current opinion that the true way to educate is to proceed in the direction of the least resistance—to lead the child to knowledge by making it easy for him; but we take it that Dean Briggs would hold neither view wholly wrong. The child should not spend years in learning a quantity of half-understood rules—of grammar, for instance—but should be led into a language by interest in its literature, by its actual use in conversation. On the other hand, what he undertakes to learn he should master, and there is no mastery without drill and discipline. He is not to half-know anything, and consequently his memory must be in constant training, and his habit of application and retention constantly improving. This drill cannot be made easy, but the subject for which the sacrifice of the drill is to be made can be rendered interesting. The old way was to spend years on drill without paying any attention to the fact that drill alone is necessarily repulsive. The true modern way is to make the pupil feel that drill is a means to an end, which he is gradually made to feel is desirable. What Dean Briggs protests against is that slovenly abuse of the true principle which in many quarters is leading to an attempt to do without drill and routine altogether. The effect of this is to destroy the sense of responsibility, and to make it harder and harder for the young to confront and overcome difficulties. It makes education, instead of a blessing, a heritage of woe.

All this part of the book is for the old, for those who educate and devise systems of education; the rest is for the young. All of it will be found instructive, and much entertaining. It touches upon the relation of instructor and pupil, so changed from what it was even a generation ago; upon the code of morality prevailing among those *in statu pupillari*, so different at some points from our mature ethics; upon the ideal which the young man should have before him. This is familiar ground. It is pleasant to feel that here at least the

youngster of to-day is nearer to us than we often think. The ideas of the author of 'Tom Brown at Rugby,' of old Col. Newcome about his boy Clive, were not very different from those which Dean Briggs would expect to find in a modern father, and the dean's boy, or freshman, is his father's own son. At Harvard, it would seem, there is a sort of blending of American and English ideals, reflected elsewhere in the transformation effected in the "crack" schools in the last thirty years, which represents progress in some directions, and in others a reversion to more conservative aims.

Classical Echoes in Tennyson. By Wilfred P. Mustard, Ph.D., Professor of Latin in Haverford College. The Macmillan Co. 1904.

The impression made by this little book, which is undoubtedly a labor of love, is not in all respects pleasant. Tennyson's indebtedness, both for thoughts and expressions, to the Greek and Roman classics is obvious even to his superficial readers. Professor Mustard has undertaken to hunt out and set down every passage which can be called a copy, an imitation, a reminiscence, a hint, a parallel, or a coincidence, in the entire works of Tennyson, to anything in the whole range of classic literature from Homer to St. Augustine. He is obliged to admit that many of these likenesses are shadowy and conjectural. He quotes from Lord Tennyson's Memoir not only his expressions of annoyance when such things were exploited without due warrant, but his assertions as to the real sources of expressions boldly referred to classic models. Yet he persists in a work which in its most important results is not needed, and in its slighter inferences almost impertinent. The book reminds one of a hard word in "Love's Labor Lost," act iv., where Armado proposes to "annothanize" *veni, vidi, vici.* Many editors think this word equivalent to *annotate;* others change it to *anatomize.* Professor Mustard has sought to annotate his favorite; he has really anatomized him. Such love is like that of Mrs. Gamp for her fellow-creatures, who was willing, if she could afford it, to lay them all out for nothing. It is to be feared Tennyson would have received it with more growls than smiles.

JUST PUBLISHED

The Forms of Public Address

Edited by Prof. GEORGE P. BAKER of Harvard.
xxiii+472 pp. $1.12 net.

This book is the outcome of Prof. Baker's work at Harvard. It is a collection of some fifty specimens of the Forms of Public Address, drawn from many sources. Its aim is to afford assistance in training students to think well on subjects which interest them, and which also may have public interest, if well presented, rather than to train them to write like any of the men whose work is selected. To this end a list of subjects is included. The book is adapted to use in connection with lecture work or in recitation.

NEW AND IMPORTANT SCRIBNER BOOKS

THE NEGRO: THE SOUTHERNER'S PROBLEM

By Thomas Nelson Page
